

3 Ways to Simplify Fireproofing

Wasting too much time on logistics like lugging around giant machinery or figuring out power setup? Portable fireproofing pumps allow you to eliminate extensive jobsite preparation and can help you focus better on completing the job at hand. **Here are three reasons why:**

1

Portability

Portable fireproofing pumps deliver high power in a small package. For example, the portable 210 lb ToughTek F340e from Graco allows for versatile mobility around the job site and can be easily unloaded from the back of your pickup truck. Its energy efficient direct drive electric motor is perfect for small to medium jobs that spray up to 100 bags per day.

2

Convenience

Portable machines that only require 120 volts of power allow you to skip having an electrician hook up a 230 volt service, reducing costly downtime. The ToughTek F340e is engineered to be plugged into a standard 120V/15A outlet, giving crews the ability to start pumping right away at any jobsite.

3

Reliability

With piston pumps, you no longer need to worry about downtime for maintenance thanks to the longer life you get from piston seals. The proprietary piston pump technology on the ToughTek F340e is easier to maintain than others in the same performance category. Select a machine that requires fewer parts on-hand and gives you the peace of mind you need when it comes to completing a job.

Graco is a leading designer and manufacturer in pump technology, including fireproofing. For more information, visit www.graco.com/toughtek.
