Motorcycle & Agricultural Equipment
Parts Manufacturer

GRACO EQUIPMENT

E-Flo DC, Electric Agitator Control, Supervisor &
Remote Monitor Touch Screen

CHALLENGE

Manufacturer wanted to be more efficient and improve process control. They needed to remotely monitor and control the paint kitchen. More specifically, they wanted to be able to monitor fluid flow, pressure readings, supply tank and day tank levels and agitator speeds.

SOLUTION

They installed E-Flo DC pumps, electric agitator control and other system equipment, along with the Supervisor and Remote Monitor Touch Screen.

RESULTS

Paint line manager is now able to monitor key data on the touch screen away from the paint room. This allows for diagnosis of the problem without having to go back to the paint room. Benefits include reduced downtime on the production line, as well as overall reduced maintenance time. It also improves process control with all information available in one location. The new electric agitators significantly reduce noise levels in the paint room.
