

# Equip Off-Road Vehicles for Highest Dependability

## Money Savings You'll Dig

Proper lubrication of your agricultural machinery requires that you know the correct maintenance intervals and location of each lube point. With manual lubrication, difficult to reach lube points get missed while easy-to-find points get over lubricated.

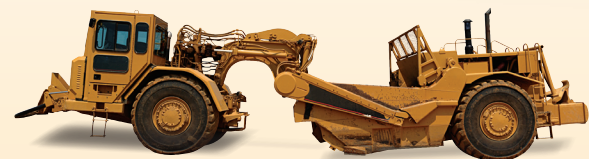

With a Graco automatic lube system, maintenance is easy. A central pump and grease reservoir is located at a convenient, accessible location. The pump dispenses grease on a scheduled basis (optional) and ensures every bearing is lubricated when it needs it most—while it's in use. Protect your investment by keeping more money in your pocket and contaminants out of your bearings.

## Graco Equipment Keeps You Moving

Forestry Harvesters and Skidders

Earth Movers

Heavy Construction

Haulers

Small to Mid-Size Equipment

Shovels and Drag Lines
