INTRODUCTION

The heart of the Spray & Stripe series is the time tested and contractor proven Airlessco "LP" piston paint pump. Designed for spraying 1700 gallons per year, this pump is used daily by thousands of painting professionals worldwide—with a reputation for trouble free performance that’s unmatched in the industry.

They’re small, compact, easy to use, and quick to clean. Even changing colors is a breeze. Stripe with water-based paints made for traffic lines or athletic fields. A professional quality spray gun is mounted on a multi-position spray arm. Their balance and light weight make them ideal for a one-man operation.

A quick release of the spray gun from its mount lets you paint using stencils, or utilize the 50’ of supplied hose and the spray gun to paint with exterior latex & enamel paints.

Flexibility makes the Spray & Stripe popular with cities, school districts, and sports programs for parking lot or athletic field striping, and for use as a mobile airless spraying station. It’s perfect for painting fences, buildings, & covering graffiti.

PART #305-240
Spray & Stripe 3500 shown has the Fixed Swivel Wheel.

PART #305-245
Spray & Stripe 3500 shown has the optional Front Swivel Wheel with RADIUS MEMORY™

IMPORTANT WARNING !!

HANDLE THIS UNIT AS YOU WOULD A LOADED FIREARM!!

High pressure spray can cause extremely serious injury. 
OBSEERVE ALL WARNINGS!

Before operating this unit, read and follow all safety warnings and instructions related to the usage of this equipment. READ, LEARN, and FOLLOW the Pressure Relief Procedure on Page 10 and understand all warnings on pages 2 thru 6.

All Service Procedures to be performed by an Authorized Airlessco Service Center ONLY. NO MODIFICATIONS or alterations of any Airlessco Equipment or part is allowed.
**TIP GUARD**

Always have the tip guard in place on the spray gun while spraying. The tip guard alerts you to the injection hazard and helps prevent accidentally placing your fingers or any part of your body close to the spray tip.

**SPRAY TIP SAFETY**

- **Always** follow the pressure relief procedure and then remove the spray tip to clean it.
- **Never** wipe off build up around the spray tip.
- **Always** remove tip & tip guard to clean after pump is turned off and the pressure is relieved by following the pressure relief procedure.

**KEEP CLEAR OF MOVING PARTS**

Keep clear of moving parts when starting or operating the sprayer. Do not put your fingers into any openings to avoid amputation by moving parts or burns from hot parts.

Precaution is the best insurance against an accident.

When starting the engine, maintain a safe distance from moving parts of the equipment.

Before adjusting or servicing any mechanical part of the sprayer, follow the pressure relief procedure, and remove the ignition cable from the spark plug to prevent accidental starting of the sprayer.

**LABELING**

Keep all labels on the unit clean and readable. Replacement labels are available from the manufacturer.
Safety Warnings

HIGH PRESSURE SPRAY CAN CAUSE EXTREMELY SERIOUS INJURY. OBSERVE ALL WARNINGS.

INJECTION HAZARD
Fluids under high pressure from spray or leaks can penetrate the skin and cause extremely serious injury, including the need for amputation.

• NEVER point the spray gun at anyone or any part of the body.
• NEVER put hands or fingers over the spray tip. Do not use a rag or any other material over your fingers. Paint will penetrate through material and into the hand.
• NEVER try to stop or deflect leaks with your hand or body.
• NEVER try to "blow back" paint, this is not an air spray sprayer.
• ALWAYS have gun tip guard in place when spraying.
• ALWAYS lock gun trigger when you stop spraying.
• ALWAYS remove tip from the gun to clean it.
• ALWAYS follow the PRESSURE RELIEF PROCEDURE, as shown on page 10, before cleaning or removing the spray tip or servicing any system equipment.
• ALWAYS Be sure equipment safety devices are operating properly before each use.
• ALWAYS tighten all fluid connections before each use.

MEDICAL TREATMENT
If any fluid appears to penetrate your skin, get EMERGENCY CARE AT ONCE. DO NOT TREAT AS A SIMPLE CUT.

* Go to an emergency room immediately.
* Tell the doctor you suspect an injection injury.
* Tell him what kind of material you were spraying with and have him read NOTE TO PHYSICIAN.

MEDICAL ALERT - Airless Spray Wounds
If any fluid appears to penetrate your skin, get EMERGENCY MEDICAL CARE AT ONCE. DO NOT TREAT AS A SIMPLE CUT. Tell the doctor exactly what fluid was injected. Have him read the following "NOTE TO PHYSICIAN".

NOTE TO PHYSICIAN:
Injection in the skin is a traumatic injury. It is important to treat the injury surgically as soon as possible. DO NOT DELAY treatment to research toxicity. Toxicity is a concern with some exotic coatings injected directly into the bloodstream. Consultation with a plastic surgeon or reconstructive hand surgeon may be advisable.

GENERAL PRECAUTIONS
• NEVER alter equipment in any manner.
• NEVER smoke while in spraying area.
• NEVER spray highly flammable materials.
• NEVER use around children.
• NEVER allow another person to use sprayer unless they are thoroughly instructed on safety use and given this operators manual to read.
• ALWAYS wear a spray mask, gloves and protective eye wear while spraying.
• ALWAYS ensure fire extinguishing equipment is readily available and properly maintained.

NEVER LEAVE SPRAYER UNATTENDED WITH PRESSURE IN THE SYSTEM. FOLLOW PRESSURE RELIEF PROCEDURES ON PAGE 10.
Safety Warnings

GROUNDING

Ground the sprayer and other components in the system to reduce the risk of static sparking, fire or explosion which can result in serious bodily injury and property damage.

Always ground all of these components:

- **Fluid Hose**: use only grounded hoses.
- **Spray gun or dispensing valve**: grounding is obtained through connection to a properly grounded fluid hose and pump.
- **Object being sprayed**: according to your local code.
- All solvent pails used when flushing should only be metal pails which are conductive.

Once each week, check electrical resistance of hose (when using multiple hose assemblies, check overall resistance of un-pressurized hose must not exceed 29 mégohms (max) for any coupled length or combination of hose lengths. If hose exceeds these limits, replace it immediately.

Never exceed 300 Ft. (150 m.) overall combined hose length to assure electrical continuity.

AVOID COMPONENT RUPTURE

This sprayer operates at 2500 psi (170 bar). Always be sure that all components and accessories have a maximum working pressure of at least 3000 psi to avoid rupture which can result in serious bodily injury including injection and property damage.

- **NEVER** leave a pressurized sprayer unattended to avoid accidental operation of it which could result in serious bodily injury.
- **ALWAYS** follow the PRESSURE RELIEF PROCEDURE whenever you stop spraying and before adjusting, removing or repairing any part of the sprayer.
- **NEVER** alter or modify any part of the equipment to avoid possible component rupture which could result in serious bodily injury and property damage.
- **NEVER** use weak, damaged or non-conductive paint hoses. Do not allow kinking or crushing of hoses or allow it to vibrate against rough, sharp or hot surfaces. Before each use, check hoses for damage and wear and ensure all fluid connections are secure.
- **REPLACE** any damaged hose. NEVER use tape or any device to mend the hose.
- **NEVER** attempt to stop any leakage in the line or fittings with your hand or any part of the body. Turn off the unit and release pressure by following PRESSURE RELIEF PROCEDURE on page 10.
- **ALWAYS** use approved high pressure fittings and replacement parts.
- **ALWAYS** ensure fire extinguishing equipment is readily available and properly maintained.

**WARNING**

Do not use halogenated solvents in this system. The prime valve, 2 gun manifold and most airless guns have aluminum parts and may explode. Cleaning agents, coatings, paints or adhesives may contain halogenated hydrocarbon solvents. DON’T TAKE CHANCES! Consult your material suppliers to be sure. Some of the most common of these solvents are: Carbontetrachloride, Chlorobenzene, Dichloroethane, Dichloroethyl Ether, Ethylbromide, Ethylchloride, Tetrachloethane. Alternate valves and guns are available if you need to use these solvents.
WHEN ADDING FUEL
- Turn engine OFF and let engine cool at least 2 minutes before removing gas cap.
- Fill fuel tank outdoors or in well ventilated area.
- Do not overfill fuel tank. Fill tank to approximately 1½ inches below top of neck to allow for fuel expansion.
- Keep gasoline away from sparks, open flames, pilot lights, heat and other ignition sources.
- Check fuel lines, tank, cap and fittings frequently for cracks or leaks. Replace if necessary.

• NEVER use cleaning solvents with flash points below 140°F. Some of these are: acetone, benzene, ether, gasoline and naphtha. Consult your supplier to be sure.
• NEVER smoke in the spraying/cleaning area.

PREVENT STATIC SPARKING FIRE/EXPLOSIONS
ALWAYS be sure all equipment and objects being sprayed are properly grounded. Always ground sprayer, paint bucket and object being sprayed. See "grounding" on page 4 for detailed grounding information.

Vapors created when spraying can be ignited by sparks. To reduce the risk of fire, do not plug in or unplug any electrical cords in an enclosed spray area. This can create sparks when there is any chance of igniting vapors still in the air. Follow the coating & solvent manufacturers safety warnings and precautions.

Use only conductive fluid hoses for airless applications. Be sure gun is grounded through hose connections. Check ground continuity in hose & equipment. Overall (end to end) resistance of un-pressurized hose must not exceed 29 megohms for any coupled length or combination of hose length. Use only high pressure airless hoses with static wire approved for 3000 psi.

WHEN SPRAYING & CLEANING WITH FLAMMABLE PAINTS OR PAINT THINNERS:
1. When spraying with flammable liquids, unit must be located a minimum of 25 feet away from spraying area in a well ventilated area. Ventilation must be sufficient enough to prevent the accumulation of vapors.
2. To eliminate electrostatic discharge, ground the spray unit, paint bucket and spraying object. Use only high pressure airless hoses approved for 3000 psi which is conductive.
3. Remove spray tip before cleaning gun and hose. Make contact of gun with bucket and spray without the tip in a well ventilated area, into the grounded steel bucket.
4. Never use high pressure in the cleaning process. USE MINIMUM PRESSURE.
5. Do not smoke in spraying/cleaning area.

GAS ENGINE PRECAUTIONS
WHEN ADDING FUEL
- Turn engine OFF and let engine cool at least 2 minutes before removing gas cap.
- Fill fuel tank outdoors or in well ventilated area.
- Do not overfill fuel tank. Fill tank to approximately 1½ inches below top of neck to allow for fuel expansion.
- Keep gasoline away from sparks, open flames, pilot lights, heat and other ignition sources.
- Check fuel lines, tank, cap and fittings frequently for cracks or leaks. Replace if necessary.

• ALWAYS follow the PRESSURE RELIEF PROCEDURE on page 10.
• ALWAYS remove the spray tip before flushing. Hold a metal part of the gun firmly to the side of a metal pail and use the lowest possible fluid pressure during flushing.
• NEVER use cleaning solvents with flash points below 140°F. Some of these are: acetone, benzene, ether, gasoline and naphtha. Consult your supplier to be sure.

Important: United States Government safety standards have been adopted under the Occupational Safety & Health Act. These standards, particularly the General Standards, Part 1910, & the Construction Standards, part 1926 should be consulted.

WHEN STARTING ENGINE
- Make sure spark plug, muffler, fuel cap and air cleaner are in place.
- Do not crank engine with spark plug removed.
- If fuel spills, wait until it evaporates before starting engine.
- If engine floods, set choke to OPEN/RUN position, place throttle in FAST and crank until engine starts.

WHEN OPERATING EQUIPMENT
- Do not tip engine or equipment at angle which causes gasoline to spill.
WHEN TRANSPORTING EQUIPMENT
- Transport with fuel tank EMPTY or with fuel shut-off valve OFF.

WHEN STORING GASOLINE OR EQUIPMENT WITH FUEL IN TANK
- Store away from furnaces, stoves, water heaters and other appliances that have pilot lights or other ignition source. They can ignite gasoline vapors.
- If there is natural or LP gas leakage in area, do not start engine.
- Do not use pressurized starting fluids because vapors are flammable.

Starting engine creates sparking.
Sparking can ignite nearby flammable gases.
Explosion and fire could result.

WARNING

Rapid retraction of starter cord (kickback) will pull hand and arm toward engine faster than you can let go.
Broken bones, fractures, bruises or sprains could result.

WARNING

When starting engine, pull cord slowly until resistance is felt, then pull rapidly.
Remove all external equipment/engine loads before starting engine.
Direct coupled equipment components such as, but not limited to, blades, impellors, pulleys, sprockets, etc. must be securely attached.

Rotating parts can contact or entangle hands, feet, hair, clothing or accessories.
Traumatic amputation or severe laceration can result.

WARNING

Engines give off carbon monoxide, an odorless, colorless, poison gas.
Breathing carbon monoxide can cause nausea, fainting or death.

WARNING

Running engines produce heat. Engine parts, especially mufflers, become extremely hot.
Severe thermal burns can occur on contact. Combustible debris, such as leaves, grass, brush, etc. can catch fire.

WARNING

Allow muffler, engine cylinder and fins to cool before touching.
Remove accumulated combustibles from muffler area and cylinder area.
Install and maintain in working order a spark arrester before using equipment on forest covered, grass covered and brush covered unimproved land. The state of California requires this (Section 4442 of the California Public Resources Code). Other states may have similar laws. Federal laws apply on federal land.

Unintentional sparking can result in fire or electric shock.
Unintentional start up can result in entanglement, traumatic amputation, or lacerations.

BEFORE PERFORMING ADJUSTMENTS OR REPAIRS
- Disconnect spark plug wire and keep it away from spark plug.
- Disconnect battery at negative terminal (only engines with electric start).

WHEN TESTING FOR SPARK
- Use approved spark plug tester.
- Do not check for spark with spark plug removal.

BEFORE PERFORMING ADJUSTMENTS OR REPAIRS
- Disconnect spark plug wire and keep it away from spark plug.
- Disconnect battery at negative terminal (only engines with electric start).

WARNING

Start and run engine outdoors.
Do not start or run engine in enclosed area, even if doors or windows are open.
How to Flush

FIGURE 1
LOCK TRIGGER TO REMOVE SPRAY TIP

FIGURE 2
CONTROL VALVE

1. Be sure the gun safety latch is engaged and there is no spray tip in the gun. Refer to Fig. 1. Refer to your separate instruction manual provided with your gun on its safety features and how to engage safety latch.

2. Pour enough clean, compatible solvent (or water when using water-base paint) into a large, empty metal pail to fill the pump and hoses.

3. Place the suction tube into the pail

4. Turn the control valve to the prime position or fully counterclockwise. Refer to Fig. 2.

5. Turn the engine ON/OFF switch to ON.

6. Move the choke to the closed position. Refer to Fig 3.

7. Move the throttle lever slightly to the FAST position. Refer to Fig 3.

8. Turn the fuel valve ON (Honda only). Pull the start rope. Pull the engine over against compression stroke and then let the rope rewind slowly into the starter. Pull firmly and rapidly to start the engine. Do NOT drop the rope. Hold onto the handle while rewinding, or the rope may rewind improperly and jam the assembly. If the engine does not start, open the choke half way. If the engine floods, open the choke all the way and continue cranking.

9. After the engine is warm, gradually open the choke lever, increase the RPM of engine by squeezing the throttle control trigger on the handlebars.

10. Point the gun into the metal pail and hold a metal part of the gun firmly against the pail Refer to Fig. 4.

11. Disengage the gun safety latch and squeeze the gun trigger. Turn the control valve clockwise just enough to move liquid at low pressure.

12. Allow the pump to operate until clean solvent comes from the gun.

13. Release the trigger and engage the gun safety latch.

14. If you are going to start spraying, place the pump or suction tube into the supply container. Release the gun safety latch and trigger the gun into another empty, metal container, holding a metal part of the gun firmly against the metal pail (Fig. 4) and force the solvent from the pump and hose. When paint starts coming from the gun, turn control valve to prime or fully counter clockwise position and engage the gun safety latch.

15. If you are going to store the sprayer, remove the suction tube or pump from the solvent pail force the solvent from the pump and hose. Engage the gun safety latch and refer to the “Storage” Procedure on page 8.

16. Whenever you shut off the sprayer follow the Pressure Relief Procedure warning on page 10.

To reduce the risk of static sparking, which can cause fire or explosion, always hold a metal part of the gun firmly against the metal pail when flushing. This also reduces splashing. Refer to Fig.4.
Flushing

Read prior to using your sprayer

1. New Sprayer
   Your Airlessco unit was factory tested in an antifreeze solution which was left in the pump. Before using oil-base paint, flush with mineral spirits only. Before using water-base paint flush with soapy water, then do a clean water flush.

2. Changing Colors
   Flush with a compatible solvent such as mineral spirits or water.

3. Changing from Water-Base to Oil-Base Paint
   Flush with soapy water, then mineral spirits.

4. Changing from Oil-Base to Water-Base Paint
   Flush with mineral spirits, followed by soapy water, then do a clean water flush.

5. Storage
   Oil-base paint: Flush with mineral spirits.
   Water-base paint: Flush with water, then mineral spirits and leave the pump, hose and gun filled with mineral spirits. For longer storage, use mixture of mineral spirits and motor oil (half & half). Shut off the sprayer, follow Pressure Relief Procedure on page 10
1. Connect the hose and gun.
   a. If the hose is not already installed on the striper, remove the plastic cap plug from the outlet tee at the spray pump, and screw a conductive or grounded 3000 psi airless spray hose onto fluid outlet.
   b. Connect an airless spray gun to the other end of the hose.
   c. Do not use steel braided airless hose. Use nylon braided airless hose only.

   NOTE: Do not use thread sealer on swivel unions as they are made to self-seal. Use thread seal on tapered male threads only.

2. Remove the snap-on cover plate over the piston.

3. Grounding

   WARNING

   To reduce the risk of static sparking, fire or explosion which can result in serious bodily injury and property damage, always ground the sprayer and system components and the object being sprayed, as instructed in the safety warning section of this manual.

   A small steel chain grounding strap is installed at the factory to prevent static build-up.

4. Flush the sprayer

   As per “Flushing Procedure” in this manual.

3. Fill the packing nut/wet cup with 5 drops of Airlessco Throat Seal Oil (TSO) and then reinstall snap-on piston cover plate.

   Failure to lubricate the piston properly with throat seal oil can cause premature wear and damage to piston and packings.
Pressure Relief Procedure

To avoid possible serious bodily injury, including injection, always follow this procedure whenever the sprayer is shut off, when checking or servicing it, when installing or changing the tips, whenever you stop spraying or when you are instructed to relieve the pressure.

1. Engage gun safety latch. Refer to instruction manual provided with your gun on its safety features and how to engage safety latch.

2. Turn engine off using OFF switch on the engine.

3. Disengage safety latch & trigger gun to relieve residual fluid pressure. Hold metal part of the gun in contact with grounded metal pail.

4. Re-engage gun safety latch.

5. Turn Control Valve (Prime/Pressure Relief Valve) as shown open (priming) to relieve fluid pressure.

Daily Maintenance

1. Keep the displacement pump packing nut/wet cup lubricated with Airlessco TSO (Throat Seal Oil) at all times. The TSO helps protect the rod and the packings.

2. Inspect the packing nut daily. Your pump has a patented Triple Life Packing System. Packing life will be extended a minimum of three times if the following "Packing Adjustment" procedure is followed:

   If seepage of paint into the packing nut and/or movement of the piston upward is found (while not spraying), the packing nut should be tightened enough to stop leakage only, but not any tighter. Overtightening will damage the packings and reduce the packing life.

3. Tighten suction nut daily.
Starting Up

1. Learn how to operate the control valve.

The control valve sets the prime or pressure position as well as the spraying pressure. When the valve is fully counter-clockwise the unit is in the prime position. As the control valve is turned clockwise, the unit’s output pressure to the gun is gradually increased until the control valve is fully clockwise and the unit is at its maximum output pressure of 2500 psi. This will fully atomize any stain or paint without needing to dilute the material.

g. Disengage gun safety latch & squeeze gun trigger. Turn control valve clockwise just enough to move liquid at low pressure.

h. Allow the pump to operate until clean solvent comes from the gun.

i. Install spray tip onto gun.

j. If so equipped, turn engine switch to ON position, then pull starter rope vigorously until engine starts.

k. Turn Control Valve clockwise to the desired spray pressure required to properly atomize your material (Sprayer is limited to a maximum of 2500 psi).

l. Disengage the gun safety lock and you are ready to start spraying.

If you spray into the paint bucket, always use the lowest spray pressure and maintain firm metal to metal contact between gun and container.

FOLLOW “PRESSURE RELIEF PROCEDURES” ON PAGE 10 WHENEVER YOU:
- are instructed to relieve pressure
- stop spraying
- checking or servicing any of the system equipment.
- install or clean the spray tip.

To stop the unit in an emergency or before performing any service or maintenance procedure follow the Pressure Relief Procedure on page 10 to relieve the fluid pressure.

HANDLE THE SPRAY SYSTEM AS YOU WOULD A LOADED FIREARM!!

2. Prepare the Material

a. Prepare the material according to the manufacturer’s material recommendations.

b. Place the suction tube into the material container.

3. Starting the Sprayer

Refer to Figure above for steps a - c

a. Pressure Control Knob must be in the low pressure position.

b. Control Valve must be open to the priming position or fully counterclockwise.

Refer to Fig 3 Page 7 for steps c - h.

c. Move the choke to the closed position.

d. Move the throttle lever slightly to the FAST position.

e. Turn fuel valve ON (Honda only). Pull the start rope. Pull engine over against compression stroke & let the rope rewind slowly into the starter. Pull firmly & rapidly to start engine. Do NOT drop the rope. Hold onto handle while rewinding or the rope may rewind improperly & jam the assembly. If the engine does not start, open the choke half way. If engine floods, open the choke all the way & continue cranking.

f. After the engine is warm, gradually open the choke lever, increase the RPM of engine by squeezing the throttle control trigger on the handlebars.

g. Disengage gun safety latch & squeeze gun trigger. Turn control valve clockwise just enough to move liquid at low pressure.

h. Allow the pump to operate until clean solvent comes from the gun.

i. Install spray tip onto gun.

j. If so equipped, turn engine switch to ON position, then pull starter rope vigorously until engine starts.

k. Turn Control Valve clockwise to the desired spray pressure required to properly atomize your material (Sprayer is limited to a maximum of 2500 psi).

l. Disengage the gun safety lock and you are ready to start spraying.

If you spray into the paint bucket, always use the lowest spray pressure and maintain firm metal to metal contact between gun and container.

5. Adjusting the Pressure

a. Turn the Control Valve clockwise to increase pressure and counter clockwise to decrease pressure.

b. Always use the lowest pressure and engine RPM necessary to completely atomize the material.

c. If wider coverage is needed, use a larger tip rather than increasing the pressure.

d. Check the spray pattern. The tip size and angle determines the pattern width and flow rate.

e. A trigger locking button is provided on the engine speed and spray gun actuation levers to prevent hand cramping and user fatigue during extended striping sessions.

Operating the sprayer at higher engine RPM or higher pressure than needed wastes material, causes early tip wear and shortens engine and sprayer pump life!
1. Choose handle location

The choices are, installing the handle opposite of the single wheel assembly (standard set up) or placing the handle directly over the single wheel assembly. The handle location is really a matter of personal preference, however having the handle away from the single wheel assembly allows for easier loading/unloading from a van or truck.

2. Cable Tension Adjustment

Once the handle and gun arm assemblies are set up to the preferred positions, pressurize the unit and trigger each gun to ensure that they activate and release correctly. If not, adjust the cable tension as follows:

a. Locate the adjustment knobs on the base of the gun trigger, where the cable connects to the gun trigger assembly.

b. Loose the locking nut & move the adjusting screw until the slack has been removed from the cable.

c. Tighten locking nut and retest gun triggers for proper function.

*Note: There is an additional cable adjustment where the cable attaches to the gun holder assembly. Use only if the gun trigger adjustment is insufficient.*

3. Miscellaneous Operations

**CURBS:** To paint at a 90 degree angle to spray the sides of curbs install a part # 032-028 swivel between gun head and tip guard and aim guard sideways towards the curb.

**WIDE STRIPES:** Install wider fan striping tips and raise the gun height to achieve the desired width line.

**STENCILS:** Install standard spray tip on the outer gun. Rotate gun to remove from the gun holder and use the gun to spray within your stencils. Use of an extension pole will make this job a lot easier on the operators back and is highly recommended.

**STANDARD PAINTING:** Install the appropriate size and type of paint spraying tip (standard paint spray, “W” wide pattern, or “Fine Finish”). Remove gun and spray just as you do for stencils. Additional paint hose may be required depending on the distance between the job and the equipment.

---

1. Setting the Swivel Wheel

Refer to figure below

a. Release Swivel Wheel Trigger to adjust the wheel to desired angle.

b. To set the angle for constant arch loosen the jam nuts on the Turnbuckle. Place Turnbuckle onto the mounting nub located on the striper frame. Adjust the turnbuckle until it fits over the mounting nub located on the wheel frame. Tighten jam nuts on the turnbuckle to affix the length.

*Note: If you have archs that you paint regularly, purchase additional Turnbuckles (P.N. 136-163) and keep them set to those arc sizes for easy use.*
Striping Tip Guide

<table>
<thead>
<tr>
<th>STRIPING TIP - ORIFICE SIZE (inches)</th>
</tr>
</thead>
<tbody>
<tr>
<td>in</td>
</tr>
<tr>
<td>1-2</td>
</tr>
<tr>
<td>2-4</td>
</tr>
<tr>
<td>4-6</td>
</tr>
<tr>
<td>6-8</td>
</tr>
</tbody>
</table>

Striping Tips should not be used for regular spraying. Striping tips are designed for a single pass application, while spray tips are designed for the 1/3 overlap technique used for spray painting.

Spray Tip Replacement: During use high pressure will cause the orifice to grow larger. This destroys the flat spray pattern or will leave tailing or two heavy lines on the outside of the pattern. When this occurs replace the spray tip or excessive paint will be wasted.

**REV-TIP™** for Striping
P.N. 562-xxxxST
Includes Rev-Tip™, Metal Seal & O-Ring Seal.

Sample:

560-215

**REV-GUARD™** Super Compact
P.N. 561-001
11/16-16 "F" Thread. Fits: Airlessco, and some ASM, Wagner, and Campbell Hausfeld.

P.N. 561-002
Spray Gun Operation

Spray Gun Operation

Spray Gun

Attach spray gun to airless unit and tighten fittings securely. Set the gun safety latch. (Also may be called gun safety lock, or trigger lock)

* The gun safety latch should always be set when the gun is not being triggered.

Read all warnings and safety precautions supplied with the spray gun and in product manual.

Major Components of Spray Gun & Reversible REV-TIP™

Spray Gun

Reversible Spray Tip

Tip Guard

Trigger Guard

Gun Safety Latch or Lock

Press up here & pull gently to remove trigger guard

Metal Seat

REV-TIP™ Cylinder

Guard Housing Assembly

REV-GUARD™

Spray Plug

Cleaning Spray Gun

Immediately after the work is finished, flush the gun out with a solvent. Brush pins with solvent and oil them lightly so they will not collect dried paint.

Cleaning Filter in Gun Handle

To clean the filter, use a brush dipped in an appropriate solvent. Change or clean filters at least once a day. Some types of latex may require a filter change after four hours of operation.

To Remove Clogs from Spray Tip

1. Lock gun safety latch.
2. Turn REV-TIP™ handle 180 degrees.
3. Disengage trigger lock and trigger gun into the pail.
4. If the REV-TIP™ handle appears locked (resists turning), loosen the retaining nut. The handle will now turn easily.
5. Engage gun safety latch and return handle to the spray position.

Clogged Flat Tip

Should the spray tip become clogged, relieve pressure from hose by following the "Pressure Relief Procedure." Secure gun with the safety latch, take off guard, take out the tip, soak in appropriate solvent & clean with a brush. (Do not use a needle or sharp pointed instrument to clean the tip. The tungsten carbide is brittle and can chip.)

Servicing the Fluid Pump

Fluid Pump Disconnect

Refer to Figure 1

1. Follow the Pressure Relief Procedure on page 10.
2. Flush the material you are spraying out of the machine.
3. Remove the connecting rod shield (331-111).
4. Move the piston rod (331-093) to its lowest position by cycling pump slowly.
5. Remove the retaining ring (331-062) from the connecting rod (331-038) and slide the sleeve (331-117) down revealing the connecting rod pin (331-065).
6. Remove the suction tube assembly from the fluid pump (331-209) by unscrewing the suction nut (331-034) with the packing adjustment tool.
7. Using a 1/2” wrench unscrew the two bolts (100-318) from the cover assembly (331-234). The fluid pump (331-209) will be hanging loosely at this point.
8. Remove the connecting rod pin (331-065) out of the connecting rod (331-038), allowing the removal of the fluid pump (331-209) from the machine.

Fluid Pump Reinstall

Refer to Figure 1 & 4

1. Loosen the packing nut and ensure that the piston rod (331-093) is in its upper position in the fluid pump body (331-011). Slip the sleeve (331-117) & the retaining ring (331-062) over the piston rod.
2. Push the piston rod up into the connecting rod (331-038) & align the holes. Insert the connecting rod pin (331-065) through the connecting rod & piston. Slip the sleeve up over the connecting rod pin and insert the retaining ring into the groove on the connecting rod.
3. Push the two bolts (100-318) through the tube spacers (331-074) & screw them into the cover assembly (331-234). Using a 1/2” wrench, tighten the two bolts evenly (alternating between them) until you reach 20 ft-lbs.
4. Reassemble lower suction valve assembly by placing the suction seat (331-409), O-ring (106-011), suction ball (331-030) & suction ball guide (331-029) in the suction nut (331-034) & screw onto fluid pump body.
5. Start the machine and operate slowly to check the piston rod for binding. Adjust the two bolts, holding the fluid pump body to the cover assembly, if necessary. This will eliminate any binding.
6. Tighten the packing nut clockwise until resistance is felt against the Belleville Springs, then go 3/4 of a turn more. Put five drops of Airlessco Throat Seal Oil into the packing nut.
7. Run the machine at full pressure for several minutes. Release the pressure by following the Pressure Relief Procedure & readjust the packing nut per step 6 above.
8. Install the connecting rod shield (331-111) so that the small hole is in the upper right hand corner.
**DISASSEMBLY OF THE OUTLET VALVE**  
**REFER TO FIGURE 3**

1. Disconnect the Fluid Pump following instructions on page 17.
2. Place piston holder (331-195) in a vise. Slide piston into the holder & lock in place with a 3/8” dowel (331-196).
3. Use a 1/4” allen wrench to unscrew the outlet seat retainer (331-026) from the piston.
4. Remove the outlet seat (331-026), O-ring (331-100) and outlet ball (331-027).
5. Inspect outlet ball & seat for wear. Replace as necessary.
6. While piston is still locked in the holder, install parts back into the piston in the following order:  
   **ball, outlet seat and O-ring**

   Before reinstalling the outlet seat support, apply two drops of Loctite No. 242 (blue) on the threads & torque to 20 ft-lbs.

---

**NOTE:** Airlessco LP pump tool kit 188-197 is suggested for this task.  
Kit includes: Packing Tightening Bar (189-211), Packing Removal Tool (331-153), Piston Holder (331-195), 3/8” dowel (331-196).

---

**Servicing the Suction Assembly**

**REFER TO FIGURE 4**

1. Un-thread and remove suction nut from the fluid pump body.
2. Remove suction seat (331-409), O-ring (106-011), suction ball (331-030) and suction retainer (331-029).
3. Clean all parts and inspect them for wear or damage, replacing parts as needed.
4. Clean inside of the fluid pump body.
5. Reassemble lower suction valve assembly by placing the suction seat (331-409), O-ring (106-011), suction ball (331-030) & suction ball guide (331-029) in the suction nut (331-034) &
Packing Replacement Procedures

Replacement Instructions:

**Fluid Pump Removal - Refer to Figure 1**
1. Follow the Pressure Relief Procedure on page 9.
2. Flush material you are spraying out of the machine.
3. Remove the connecting rod shield (331-111).
4. Move the piston rod (331-093) to its lowest position by cycling pump slowly.
5. Remove the retaining ring (331-062) from the connecting rod (331-038) and slide the sleeve (331-117) down revealing the connecting rod pin (331-065).
6. Remove the suction tube assembly from the fluid pump (331-209) by unscrewing the suction nut (331-034) with the packing adjustment tool.
7. Using a 1/2” wrench unscrew the two bolts (100-318) from the cover assembly (331-234). The fluid pump (331-209) will be hanging loosely at this point.
8. Remove the connecting rod pin (331-065) out of the connecting rod (331-038), allowing the removal of the fluid pump (331-209) from the machine.

**Disassembly of the Fluid Pump - Figure 6**
1. Unscrew & remove the packing nut (331-037).
2. Push the piston rod (331-708) down through the packings & out of the pump.
3. Now push the packing removal tool (331-465) up through the pump & remove from the top bringing packings, spacer & springs along with it, leaving fluid body (331-011) empty.

*Make sure all old packings & glands have been removed from fluid pump.

5. Disassemble all parts & clean for reassembly. Discard any old packings.
6. Lubricate leather packing in lightweight oil for 10 minutes prior to reassembly.

**Disassembly of the Outlet Valve - Figure 3**
1. Place piston holder (331-195) in a vise. Slide piston into the holder & lock in place with a 3/8” dowel.
2. Use a 1/4” allen wrench to unscrew the outlet seat retainer (331-026) from the piston.
3. Remove the outlet seat (331-026), O-ring (331-100) and outlet ball (331-027).
4. Inspect outlet ball & seat for wear. Replace as necessary.
5. While piston is still locked in the holder, install parts back into the piston in the following order:

   **ball, outlet seat and O-ring**

   Before reinstalling the outlet seat support, apply two drops of Loctite No. 242 (blue) on the threads & torque to 20 ft-lbs.

6. Take assembled glands & packings (13 pieces) & slide on to the lower half of the piston.
7. Take the spacer (331-018) & slide over the top of the piston (it doesn’t matter which direction it sits), falling onto lower packings.
8. Take three Belleville Springs (331-025) & slide over the top of the piston in the following order:
   * First spring, curve facing down
   * Second spring, curve facing up
   * Third spring, curve facing down
9. Take the upper male gland (331-022) & place it rounded side up.
10. Take three upper polyethylene packings (331-016) & two of the leather packings (331-306) & place onto the male gland in the following order with the inverted side down:
   - Polyethylene, leather, polyethylene, leather, polyethylene.
11. Take upper female gland (331-021) & place on top of the assembled upper packings with the inverted side down.
12. Take assembled upper glands & packings (7 pieces) & slide on over the top of the piston, making sure inverted sides are down.
13. Take the packing holder (331-019) & replace the white O-ring (106-009) & the black O-ring (106-010) with new ones from the packing kit.
14. Slide the packing holder over the top of the upper packings so they fit inside.
15. Lubricate inside of the fluid pump body & the outside of the packings with a light weight oil.
   * To keep packings secured in correct position, hold the pump body upside down & push the completed assembly upwards into the pump body. Once placed inside, tilt pump body back up to keep all pieces in.
17. Tighten packing nut (331-037) onto the top of the fluid pump body & tighten until you feel slight resistance against the Belleville Springs (331-025). Using the Packing Adjustment Tool (189-211), tighten another 3/4 of a turn.

**Fluid Pump Reinstallation - Figure 1 & 4**
1. Loosen packing nut & ensure that the piston rod (331-093) is in its upper position in the fluid pump body (331-011). Slip the sleeve (331-117) & the retaining ring (331-062) over the piston rod.
2. Push piston rod up into the connecting rod (331-038) & align the holes. Insert the connecting rod pin (331-065) through the connecting rod & piston. Slip the sleeve up over the connecting rod pin & insert retaining ring into the groove on the connecting rod.
3. Push the two bolts (100-318) through the tube spacers (331-074) & screw into the cover assembly (331-234). Using a 1/2" wrench, tighten the two bolts evenly (alternating between them) until you reach 20 ft-lbs.

4. Reassemble lower suction valve assembly by placing the suction seat (331-409) O-ring (106-011), suction ball (331-030) and suction ball guide (331-029) in the suction nut (331-034) & screw onto the fluid pump body.

5. Start the machine & operate slowly to check the piston rod for binding. Adjust the bolts, holding the fluid pump body to the cover assembly, if necessary. This will eliminate any binding.

76 Tighten packing nut clockwise until resistance is felt against the Belleville Springs, then go 3/4 of a turn more. Put five drops of Airlessco Throat Seal Oil into the packing nut.

7. Run the machine at full pressure for several minutes. Release the pressure by following the Pressure Relief Procedure & readjust the packing nut per step 6 above.

8. Install the connecting rod safety shield (Fig. 1 Part # 331-111) so that the small hole is in the upper right hand corner.
Inspection & Replacement of Control Valve, Ball & Seat

1. Use a wrench to unscrew the control valve with ring seal.
2. Make sure that the control valve knob turns freely and that its stem is not worn unevenly, mushroomed or otherwise damaged.
3. Remove TC guide, verify that it is unbroken, clean and notch side is up.
4. Remove control ball. Inspect for any cuts, scratches, chips, rust or other damage.
5. Use a 7/16” allen wrench to unscrew the control seat from the valve body. Clean seat and inspect bevel edge for damage. Also ensure that the gasket on the underside of the seat is intact.
6. If no obvious damage to the control ball and seat, place ball into seat and fill with water. If water leaks out between ball and seat, they must be replaced.
7. Replace control valve, ball, seat and/or TC guide as necessary.
8. Clean and inspect valve body opening, where the control seat was installed.
9. Grease valve body opening with multipurpose grease.
10. Screw control seat into valve body and torque to 85 ft-lbs.
11. Place TC guide into control seat with notched side up.
12. Drop control ball into TC guide.
13. Screw control valve with ring seal into pump head. Torque to 15 ft-lbs.
14. If a new control valve, ball or seat is installed, complete the Pressure Calibration Procedure.

A repair kit with the control ball and seat is available as KIT-3-3100.

Pressure Control Calibration

DO NOT USE THIS PROCEDURE WITHOUT A TEST GAUGE!

1. Install a gun, flexible airless hose and Airlessco part # 111-045 glycerin filled test gauge onto unit.
2. Prime unit.
3. Turn the control valve knob fully clockwise (maximum pressure setting).
4. Read the gauge, it should be approximately 2500 PSI.
5. If maximum pressure is incorrect, remove the black plastic cap from the control valve knob. Insert a 3/16” allen wrench into the control valve knob set screw, turn clockwise to increase pressure and counter-clockwise to decrease pressure. Replace black plastic cap.
6. NEVER set the maximum pressure above 2500 PSI.

*Not Shown*
**XTEND-A-POLE SYSTEM**

Tip Extensions - Complete with Patented SPRAY CLEAN REV-GUARD

- **032-170**: 6” Long
- **032-171**: 12” Long
- **032-172**: 18” Long
- **032-173**: 24” Long

SWIVEL EXTENSION, “G” THREAD

- **032-184**: 36” Long

**Swivel “G” Thread Adapters**

- **032-035**: 7/8” - 14 Swivel

**Extensions (Bare Poles)**

Add Tip Extension or Swivel Extension to create desired length

- **032-053**: 24” Long
- **032-054**: 36” Long

**Flat Tip Washers**

- **120-008**: Flat Tip Washer
- **120-090**: Flat Tip Washers 25 Pack

**Flat Tip Washers**

- **120-090CX**: Coarse
- **120-090FX**: Fine
- **120-088**: Filter Spring

**GUN FILTERS**

- **114-030**: 20 oz. can

**STAY CLEAN™**

Spray protectant for your machine to prevent paint from sticking to it.

**THROAT SEAL OIL**

Used in the wet cup of a piston pump to prevent paint from drying on the piston & causing damage to the upper packing. Use with all piston pumps.

- **188-187**: 6 oz. Bottle
- **188-392**: 1 qt. Bottle

**HIGH PRESSURE HOSE**

Strong yet flexible, suitable for airless equipment up to 3300 PSI

**PUMP CONDITIONER**

Should be used on piston pumps between uses to prevent paint from drying on the piston & causing packing wear.

- **010-001**: Display of 48 - 1 oz. bottles
- **010-009**: 1 quart bottle
- **010-019**: 1 Gallon bottle

Case order quantity: 12 on quarts, 4 on gallons

**PAINT STRAINERS**

Prefilter your paint using strainers. One dozen per pack.

- **100-064**: Used to cover suction filter

**REV-TIP™**

Part # 560-xxx REV-TIP for Spray Painting
562-xxxST REV-TIP for Striping

- POSI-LOC™ SYSTEM
  - Snap in centering of tip. No leaks, splashback or mess.
- SEAL LOCATING HANDLE
  - Tip handle simplifies installing & aligning the seal.
- EASIEST ASSEMBLY
  - Fewer parts - Less complicated takes only seconds!
- INTERCHANGEABLE
  - Can be used with most tip guards.
- HIGHEST QUALITY CARBIDE
  - Micro-ground for extra long life, consistent tip size & pattern.
- STRINGER HOLE
  - Hang tip from hole for cleaning
- SINGLE-SEAL
  - Metal seal - no leaks - sprays all coatings.

---

**Quick Flush**

Cuts Cleaning Time & Saves Paint!
Part # 170-005
Simple to Use...Fast to Finish!

Connect adapter to any “F” or “G” thread airless spray gun & to a garden hose. Lock trigger open, turn on water flow to backflush paint into the original bucket for reuse while cleaning gun, hose, and pump.

---
