Repair

Electric Airless Sprayers

For portable spray application of architectural paints and coatings. For professional use only.

Not approved to European explosive atmosphere requirements.

Models
24F562 (SP400 Hi Boy)
24F564 (Mustang 4700 Hi Boy)
24F561 (SP400 Stand)
24F563 (Mustang 4700 Stand)

3300 psi (22.7MPa, 227 bar) Maximum Working Pressure

Important Safety Instructions
Read all warnings and instructions in this manual. Save these instructions.

Warnings

The following warnings are for the setup, use, grounding, maintenance, and repair of this equipment. The exclamation point symbol alerts you to a general warning and the hazard symbols refer to procedure-specific risks. When these symbols appear in the body of this manual, refer back to these Warnings. Product-specific hazard symbols and warnings not covered in this section may appear throughout the body of this manual where applicable.

**WARNING**

**GROUNDING**

This product must be grounded. In the event of an electrical short circuit, grounding reduces the risk of electric shock by providing an escape wire for the electric current. This product is equipped with a cord having a grounding wire with an appropriate grounding plug. The plug must be plugged into an outlet that is properly installed and grounded in accordance with all local codes and ordinances.

- Improper installation of the grounding plug is able to result in a risk of electric shock.
- When repair or replacement of the cord or plug is required, do not connect the grounding wire to either flat blade terminal.
- The wire with insulation having an outer surface that is green with or without yellow stripes is the grounding wire.
- Check with a qualified electrician or serviceman when the grounding instructions are not completely understood, or when in doubt as to whether the product is properly grounded.
- Do not modify the plug provided; if it does not fit the outlet, have the proper outlet installed by a qualified electrician.
- This product is for use on a nominal 120V circuit and has a grounding plug similar to the plug illustrated in the figure below.

![Grounding Plug Illustration]

- Only connect the product to an outlet having the same configuration as the plug.
- Do not use an adapter with this product.

**Extension Cords:**

- Use only a 3-wire extension cord that has a 3-blade grounding plug and a 3-slot receptacle that accepts the plug on the product.
- Make sure your extension cord is not damaged. If an extension cord is necessary, use 12 AWG (2.5 mm²) minimum to carry the current that the product draws.
- An undersized cord results in a drop in line voltage and loss of power and overheating.
FIRE AND EXPLOSION HAZARD
Flammable fumes, such as solvent and paint fumes, in work area can ignite or explode. To help prevent fire and explosion:

- Do not spray flammable or combustible materials near an open flame or sources of ignition such as cigarettes, motors, and electrical equipment.
- Paint or solvent flowing through the equipment is able to result in static electricity. Static electricity creates a risk of fire or explosion in the presence of paint or solvent fumes. All parts of the spray system, including the pump, hose assembly, spray gun, and objects in and around the spray area shall be properly grounded to protect against static discharge and sparks. Use Airlessco conductive or grounded high-pressure airless paint sprayer hoses.
- Verify that all containers and collection systems are grounded to prevent static discharge.
- Connect to a grounded outlet and use grounded extensions cords. Do not use a 3-to-2 adapter.
- Do not use a paint or a solvent containing halogenated hydrocarbons.
- Keep spray area well-ventilated. Keep a good supply of fresh air moving through the area. Keep pump assembly in a well ventilated area. Do not spray pump assembly.
- Do not smoke in the spray area.
- Do not operate light switches, engines, or similar spark producing products in the spray area.
- Keep area clean and free of paint or solvent containers, rags, and other flammable materials.
- Know the contents of the paints and solvents being sprayed. Read all Material Safety Data Sheets (MSDS) and container labels provided with the paints and solvents. Follow the paint and solvents manufacturer's safety instructions.
- Fire extinguisher equipment shall be present and working.
- Sprayer generates sparks. When flammable liquid is used in or near the sprayer or for flushing or cleaning, keep sprayer at least 20 feet (6 m) away from explosive vapors.
### ELECTRIC SHOCK HAZARD

This equipment must be grounded. Improper grounding, setup, or usage of the system can cause electric shock.

- Turn off and disconnect power cord before servicing equipment.
- Use only grounded electrical outlets.
- Use only 3-wire extension cords.
- Ensure ground prongs are intact on power and extension cords.
- Do not expose to rain. Store indoors.

### SKIN INJECTION HAZARD

Do not aim the gun at, or spray any person or animal.

- Keep hands and other body parts away from the discharge. For example, do not try to stop leaks with any part of the body.
- Always use the nozzle tip guard. Do not spray without nozzle tip guard in place.
- Use Airlessco nozzle tips.
- Use caution when cleaning and changing nozzle tips. In the case where the nozzle tip clogs while spraying, follow the **Pressure Relief Procedure** for turning off the unit and relieving the pressure before removing the nozzle tip to clean.
- Do not leave the unit energized or under pressure while unattended. When the unit is not in use, turn off the unit and follow the **Pressure Relief Procedure** for turning off the unit.
- High-pressure spray is able to inject toxins into the body and cause serious bodily injury. In the event that injection occurs, **get immediate surgical treatment**.
- Check hoses and parts for signs of damage. Replace any damaged hoses or parts.
- This system is capable of producing 3000 psi. Use Airlessco replacement parts or accessories that are rated a minimum of 3000 psi.
- Always engage the trigger lock when not spraying. Verify the trigger lock is functioning properly.
- Verify that all connections are secure before operating the unit.
- Know how to stop the unit and bleed pressure quickly. Be thoroughly familiar with the controls.
# Warnings

## Equipment Misuse Hazard
Misuse can cause death or serious injury.

- Always wear appropriate gloves, eye protection, and a respirator or mask when painting.
- Do not operate or spray near children. Keep children away from equipment at all times.
- Do not overreach or stand on an unstable support. Keep effective footing and balance at all times.
- Stay alert and watch what you are doing.
- Do not leave the unit energized or under pressure while unattended. When the unit is not in use, turn off the unit and follow the **Pressure Relief Procedure** for turning off the unit.
- Do not operate the unit when fatigued or under the influence of drugs or alcohol.
- Do not kink or over-bend the hose.
- Do not expose the hose to temperatures or to pressures in excess of those specified by Airlessco.
- Do not use the hose as a strength member to pull or lift the equipment.

## Pressurized Aluminum Parts Hazard
Use of fluids that are incompatible with aluminum in pressurized equipment can cause serious chemical reaction and equipment rupture. Failure to follow this warning can result in death, serious injury, or property damage.

- Do not use 1,1,1-trichloroethane, methylene chloride, other halogenated hydrocarbon solvents or fluids containing such solvents.
- Many other fluids may contain chemicals that can react with aluminum. Contact your material supplier for compatibility.

## Moving Parts Hazard
Moving parts can pinch, cut or amputate fingers and other body parts.

- Keep clear of moving parts.
- Do not operate equipment with protective guards or covers removed.
- Pressurized equipment can start without warning. Before checking, moving, or servicing equipment, follow the **Pressure Relief Procedure, page 7** and disconnect all power sources.

## Toxic Fluid or Fumes Hazard
Toxic fluids or fumes can cause serious injury or death if splashed in the eyes or on skin, inhaled, or swallowed.

- Read MSDSs to know the specific hazards of the fluids you are using.
- Store hazardous fluid in approved containers, and dispose of it according to applicable guidelines.

## Personal Protective Equipment
You must wear appropriate protective equipment when operating, servicing, or when in the operating area of the equipment to help protect you from serious injury, including eye injury, hearing loss, inhalation of toxic fumes, and burns. This equipment includes but is not limited to:

- Protective eyewear, and hearing protection.
- Respirators, protective clothing, and gloves as recommended by the fluid and solvent manufacturer.
**Installation**

**Grounding and Electric Requirements**

The sprayer cord includes a grounding wire with an appropriate grounding contact.

**The sprayers require:**
110-120V Units: 100-130 VAC, 50/60 Hz, 11A, 1 phase, circuit with a grounding receptacle.

Never use an outlet that is not grounded or an adapter.

**Recommended extension cords:**
- 110-120V: 3-wire, 12 AWG (2.5 mm²) minimum.

**NOTE:** Smaller gauge or longer extension cords may reduce sprayer performance.

**Spray gun:** ground through connection to a properly grounded fluid hose and pump.

**Fluid supply container:** follow local code.

**Solvent and Oil-based fluids:** follow local code. Use only conductive metal pails placed on a grounded surface such as concrete. Do not place the pail on a non-conductive surface such as paper or cardboard, which interrupts grounding continuity.

**Grounding the metal pail:** connect a ground wire to the pail by clamping one end to pail and other end to ground such as a water pipe.

**To maintain grounding continuity when flushing or relieving pressure:** hold metal part of the spray gun firmly to the side of a grounded metal pail, then trigger the gun.

Do not use the sprayer if the electrical cord has a damaged ground contact. Only use an extension cord with an undamaged ground contact.
Pressure Relief Procedure

Follow this **Pressure Relief Procedure** whenever you are instructed to relieve pressure, stop spraying, check or service equipment or install or clean spray tip.

1. Turn OFF power and turn pressure control to lowest pressure setting.

2. Hold gun against side of grounded metal flushing pail. Trigger gun to relieve pressure.

3. Turn prime valve down.

   *If you suspect the spray tip or hose is clogged or that pressure has not been fully relieved after following the steps above, VERY SLOWLY loosen tip guard retaining nut or hose end coupling to relieve pressure gradually, then loosen completely. Clear hose or tip obstruction.*

4. Engage trigger safety lock on gun if unit is being shut down or left unattended.
General Repair Information

Flammable materials spilled on hot, bare, motor could cause fire or explosion. To reduce risk of burns, fire or explosion, do not operate sprayer with cover removed.

To reduce risk of serious injury, including electric shock:

- Do not touch moving or electric parts with fingers or tools while testing repair.
- Unplug sprayer when power is not required for testing.
- Install all covers, gaskets, screws and washers before you operate sprayer.

- Keep all screws, nuts, washers, gaskets, and electrical fittings removed during repair procedures. These parts usually are not provided with replacement kits.

- Test repairs after problems are corrected.

- If sprayer does not operate properly, review repair procedure to verify you did it correctly. See Troubleshooting, page 9.

- Overspray may build up in the air passages. Remove any overspray and residue from air passages and openings in the enclosures whenever you service sprayer.

- Do not operate the sprayer without the motor shroud in place. Replace if damaged. Motor shroud directs cooling air around motor to prevent overheating and insulates the control board from accidental electric shock.

NOTICE

- Do not run sprayer dry for more than 30 seconds. Doing so could damage pump packings.
- Protect the internal drive parts of this sprayer from water. Openings in the cover allow for air cooling of the mechanical parts and electronics inside. If water gets in these openings, the sprayer could malfunction or be permanently damaged.
- Prevent pump corrosion and damage from freezing. Never leave water or water-base paint in sprayer when it's not in use in cold weather. Freezing fluids can seriously damage sprayer. Store sprayer with Pump Armor to protect sprayer during storage.
## Troubleshooting

<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Basic Fluid Pressure</td>
<td>1. Pressure control knob setting. Motor will not run if set at minimum (fully counter-clockwise).</td>
<td>Slowly increase pressure setting to see if motor starts.</td>
</tr>
<tr>
<td></td>
<td>2. Spray tip or fluid filter may be clogged.</td>
<td>Relieve pressure, page 7. Then clear clog or clean gun filter. Refer to gun instruction manual, 312363.</td>
</tr>
<tr>
<td>Basic Mechanical</td>
<td>1. Pump frozen or hardened paint</td>
<td>Thaw sprayer if water or water-based paint has frozen in sprayer. Place sprayer in warm area to thaw. Do not start sprayer until thawed completely. If paint hardened (dried) in sprayer, replace pump packings. See Displacement Pump Replacement, page 13.</td>
</tr>
<tr>
<td></td>
<td>2. Displacement pump connecting rod pin. Pin must be completely pushed into connecting rod and retaining spring must be firmly in groove or pump pin.</td>
<td>Push pin into place and secure with spring retainer. See Displacement Pump Replacement, page 13.</td>
</tr>
</tbody>
</table>

<tr>
<td>Motor runs but pump does not stroke</td>
<td>1. Displacement pump pin damaged or missing.</td>
<td>Replace pump pin if missing. Be sure retaining spring is fully in groove all around connecting rod. See Displacement Pump Replacement, page 13.</td>
</tr>
<tr>
<td></td>
<td>3. Gears or drive housing.</td>
<td>Inspect drive housing assembly and gears for damage and replace if necessary. See Drive Housing Replacement, page 15.</td>
</tr>
<tr>
<td>Motor is hot and runs intermittently</td>
<td>1. Be sure ambient temperature where sprayer is located is not more than 115°F (46°C) and sprayer is not located in direct sun.</td>
<td>Move sprayer to shaded, cooler area if possible.</td>
</tr>
<tr>
<td></td>
<td>2. Motor has burned windings indicated by removing positive (red) brush and seeing burned adjacent commutator bars.</td>
<td>Replace motor. See Motor Replacement, page 27.</td>
</tr>
</tbody>
</table>
Displacement Pump Replacement

See manual 312362 for pump repair instructions.

Removal

2. Loosen two screws (11) and remove pail hanger (10).

3. Loosen nut (37) and remove suction tube (39). Loosen nut (B) and remove coupled hose (42).

4. Cycle pump until pin (31) is in position to be removed.

5. Disconnect power cord from outlet.

7. Loosen pump jam nut (34). Unscrew and remove pump (33).
Installation

1. Extend pump piston rod fully. Apply grease to top of pump rod (D). Install jam nut (34) on pump threads.

2. Install pump rod (D) into connecting rod (30).

3. Install pump pin (31). Verify retainer spring (30a) is in groove over pump pin.

4. Push pump (33) up until pump threads engage.

5. Screw in pump until threads are flush with top of drive housing opening.

6. Align pump outlet (E) to back.

7. Screw jam nut (34) up onto pump until nut stops. Tighten jam nut by hand, then tap 1/8 to 1/4 turn with a 20 oz (maximum) hammer to approximately 75 ft-lb (102 N·m).

8. Install suction tube (39) and coupled hose (42). Tighten nuts (37) and (B).

9. Fill packing nut with ASM Packing Seal® until fluid flows onto top of seal. Install pail hanger (10) with screws (11).

**NOTICE**

If pump pin works loose, parts could break off due to force of pumping action. Parts could project through air and result in serious injury or property damage.

If the pump jam nut loosens during operation, the threads of the drive housing will be damaged.

If pump pin works loose, parts could break off due to force of pumping action. Parts could project through air and result in serious injury or property damage.
Drive Housing Replacement

Removal
1. Relieve pressure, page 7.
3. Disconnect power cord from outlet.
4. Remove two screws (11) and cover (32).
5. Remove screw (13) and four screws (4).
6. Pull drive housing (29) out of motor front endbell.
7. Remove gear cluster (27) and (26) and thrust bearing (28) from drive housing.

NOTICE
Do not drop gear cluster (27) and (26) when removing drive housing (29). Gear cluster may stay engaged in motor front endbell or drive housing.

Installation
1. Apply a liberal coat of grease to gears and needle bearing surfaces. Install thrust bearing (28) and gears (26) and (27) in motor front endbell.
2. Push drive housing (29) into motor front endbell. Insert gear crank (27) through hole in connecting rod (30).
3. Install four screws (4) and screw (13).
4. Install cover (32) with two screws (11).
**Spin Test**

*See Wiring Diagrams, page 28.*

To check armature, motor winding and brush electrical continuity:

1. **Relieve Pressure, page 7.** Disconnect power cord from outlet.

2. **Hi-Boy Models Only** - Disconnect high-pressure hose at pump outlet *(see page 13).*

3. Remove two screws (4) and shroud (12).

4. Remove drive housing (29) *(see page 15).*

5. Disconnect motor connector (H).

**Armature Short Circuit Test**

Quickly turn motor fan by hand. If motor coasts two or three revolutions before complete stop, there are no electrical shorts. If motor does not spin freely, armature is shorted. **Replace motor, page 27.**

**Armature, Brushes, and Motor Wiring Open Circuit Test (Continuity)**

1. Connect red and black motor leads with test lead. Turn motor fan by hand at about two revolutions per second.

2. If uneven or no resistance, check for missing brush caps, broken brush springs, brush leads, and worn brushes. Repair as needed, page 18.

3. If still uneven or no resistance, **replace motor, page 27.**

4. Reattach motor connector (H).

5. Replace drive housing *(see page 15).*

6. Replace shroud (12) and two screws (4).

7. **Hi-Boy Models Only** - Connect high-pressure hose at pump outlet *(see page 14).*
Fan Replacement

Removal

1. **Relieve Pressure, page 7.** Disconnect power cord from outlet.

2. **Hi-Boy Models Only** - Disconnect high-pressure hose at pump outlet (see page 13).

3. Remove two screws (4) and shroud (12).

4. Remove spring clip (57b) on back of motor.

5. Pull off fan (57a).

Installation

1. Slide new fan (57a) in place on back of motor. Be sure blades of fan face motor as shown.

2. Install spring clip (57b).

3. Replace shroud (12) and two screws (4).

4. **Hi-Boy Models Only** - Connect high-pressure hose at pump outlet (see page 14).
Motor Brush Replacement

*See Wiring Diagram, page 28.*

**Removal**

Replace brushes worn to less than 1/4 in. (6 mm). Brushes wear differently on each side of motor, check both sides.

1. **Relieve pressure, page 7.** Disconnect power cord from outlet.
2. **Hi-Boy Models Only** - Disconnect high-pressure hose at pump outlet (see page 13).
3. Remove two screws (4) and shroud (12) (see illustration on page 17).
4. Disconnect motor connector (D) from control board (18).
5. Cut tie wrap (F).
6. Locate two yellow wires (C). Cut each yellow wire at the center.
7. Pry off two brush caps (A). Remove brushes (B) from motor.
9. Rotate fan by hand and blow compressed air into top brush holder to remove brush dust.

**NOTE:** Place end of a shop vacuum hose over lower brush holder. Turn on shop vacuum when you blow compressed air into top brush holder.

**Installation**

**NOTE:** Use all new parts included in brush kit. Do not reuse old parts if new replacement parts are provided.

1. Install new brushes (B) in motor with wires facing toward front of motor. Install positive (red) brush lead in top of motor and negative (black) brush lead in side of motor.
2. Push each cap (A) into place over brush. Orient each cap with the two projections on either side of the brush lead. You will hear a snap when cap is securely in place.
3. Strip approximately 1/4 inch (6 mm) of insulation from end of each yellow wire (C) from motor.
4. Insert stripped end into end of a butt splice (E) on new brush assembly.
5. Crimp ends of butt splice (E) around each wire. Pull gently on each wire to be sure wire does not pull out of butt splice.
6. Wrap new tie wrap around motor and wires only. Trim off excess. Be sure pressure hose is not caught in tie wrap.
7. Connect motor connector (D) to control board (18).
8. Replace shroud (12) and two screws (4) (see illustration, page 17).
9. **Hi-Boy Models Only** - Connect high-pressure hose at pump outlet (see page 14).
Control Board Replacement

See Wiring Diagram, page 28.

Removal

1. Relieve pressure, page 7. Disconnect power cord from outlet.

2. Hi-Boy Models Only - Disconnect high-pressure hose at pump outlet (see page 13).

3. Remove two screws (4) and shroud (12) (see illustration, page 17).

4. Disconnect pressure control assembly connector (A) from control board (18).

5. Disconnect motor connector (D) from control board (18).

6. Remove three screws (11) securing control board to housing (two are located on the front and one on the back next to the power cord).

7. Pull control board out slightly and then slide control board back and off of frame.

   NOTE: Make sure power cord is free and not wrapped around cord wrap.

8. Remove grommet and wires from strain relief.

   NOTE: Ground wire remains attached to sprayer with grounding screw.

9. Remove two power cord (C) connectors from control board.

   ti16079a
Control Board Replacement

Installation

1. Push grommet and power cord wires into strain relief in control board (18).

![Grommet and power cord wires](ti6122a)

2. Connect power cord connectors to terminals indicated on control board (18).

![Power cord connectors](ti16079a)

3. Slide control board into place on side of motor front endbell.

![Control board](ti11553a)

4. Replace three screws (11). Torque to 30-35 in-lb (3.4-3.9 N.m).

![Screws](ti16079a)

5. Connect motor connector (D) and pressure control assembly connector (A).

6. Install shroud (12) with two screws (4) *(see page 17)*.

7. **Hi-Boy Models Only** - Connect high-pressure hose at pump outlet *(see page 14)*.

**NOTE:** Route power cord (19) between coupled hose (42) to filter manifold and sprayer frame.
Fuse Replacement

If the fuse is blown, check for:

- Pinched or shorted wires
- A defective motor (see Spin Test, page 16)
- A locked or frozen pump

Correct defective condition before replacing fuse.

Removal
1. Relieve pressure, page 7. Disconnect power cord from outlet.
2. Hi-Boy Models Only - Disconnect high-pressure hose at pump outlet (see page 13).
3. Remove two screws (4) and shroud (12) (see illustration, page 17).
4. Remove fuse from control board.

Installation
1. Install Fuse 119277 on control board.
2. Install shroud (12) and two screws (4) (see illustration, page 17).
3. Hi-Boy Models Only - Connect high-pressure hose at pump outlet (see page 14).
Pressure Control Assembly Replacement

See Wiring Diagram, page 28.

Removal

1. **Relieve pressure, page 7.** Disconnect power cord from outlet.

2. **Hi-Boy Models Only -** Disconnect high-pressure hose at pump outlet *(see page 13).*

3. Remove two screws (4) and shroud (12) *(see illustration, page 17).*

4. Disconnect pressure switch connector (A) from control board (18). Pull bushing (23) from hole (K).

5. Pull wires through hole (K).

6. Turn pressure control knob (17) counter clockwise as far as you can to access flats on either side of pressure control.

7. Loosen and unscrew pressure control.

8. Remove pressure control.

**NOTICE**

If you plan to reuse pressure control, be careful not to damage or tangle wires when unscrewing pressure control.
Installation

1. Inspect pressure control before installation to verify o-ring is installed.

2. Align pressure control wire cap (21) on fluid manifold so opening faces toward motor.

3. Apply loctite to pressure control knob (B) threads.

4. Screw pressure control threads (B) into manifold and torque to 150 in-lb (17.0 N.m).

**NOTE:** Be careful when tightening pressure control knob that wires are not pinched between pressure control and fluid manifold.

5. Tuck wires into pressure control wire cap (21) and route wires toward cap opening. Feed wires through housing hole (K).

6. Insert bushing (23) in hole (K).

7. Connect pressure switch connector (A) to control board (18).

8. Install shroud (12) and two screws (4) (**see illustration, page 17**).

9. **Hi-Boy Models Only** - Connect high-pressure hose at pump outlet (**see page 14**).
Drain Valve Replacement

Removal

1. **Relieve pressure, page 7.** Disconnect power cord from outlet.
2. Remove pin (47) from drain valve handle (46).
3. Pull drain valve handle and valve base (45) from drain valve (44).
4. Unscrew drain valve from filter manifold (43).
5. Remove valve seat (44b) and seat gasket (44a) from inside of filter manifold or end of drain valve.

Installation

1. Install new seat gasket (44a) and valve seat (44b) on end of drain valve.
2. Screw drain valve (44) into filter manifold (43). Torque to 120 to 130 in-lb.
3. Push valve base (45) over drain valve (44) and then valve drain handle (46) over valve base.
4. Install pin (47) in drain valve handle. If necessary, use a hammer to tap pin in place completely.
Drain Line Replacement

Removal
1. Cut drain line (49) from barbed fitting (51).
2. Unscrew barbed fitting from filter manifold (43).

NOTE: To reuse existing barbed fitting (51) and drain line (49), cut and remove remaining drain line material from end of barbed fitting.

Installation
1. Screw barbed fitting (51) into filter manifold (43).
2. Push drain line (49) onto barbed fitting.

NOTE: To make drain line more pliable and easier to install over barbed fitting, heat end of drain line (49) with a hair dryer or place end in hot water a few seconds.
Power Cord Replacement

See Wiring Diagram, page 28.

Removal
1. Remove control board, Control Board Replacement, Removal, page 19.
2. Remove green ground screw (20) and disconnect green ground wire (G) from frame.

Installation
1. Connect green ground wire (G) to frame with green ground screw (20). Be sure green ground wire terminal faces up or wires could get caught in shroud.
2. Install control board, Control Board Replacement, Installation, page 20.
Motor Replacement

See Wiring Diagram, page 28.

**NOTICE**
Do not drop gear cluster (27) and (26) when removing drive housing (29). Gear cluster may stay engaged in motor front end bell or drive housing.

**Removal**

1. **Relieve pressure, page 7.** Disconnect power cord from outlet.
2. **Hi-Boy Models Only** - Disconnect high-pressure hose at pump outlet (see page 13).
3. Remove pump, **Displacement Pump Replacement, page 13.**
4. Remove drive housing, **Drive Housing Replacement, page 15.**
5. Remove control board, **Control Board Replacement, page 19.**
6. Remove two screws (4) and filter manifold (43).
7. Remove green ground screw (20) and ground wire (G) from motor endbell.
8. Remove cover (14). Remove four screws (4) and motor (57) from frame (1).

**Installation**

1. Install cover (14) on motor (57). Install motor on frame (1) with four screws (4).
2. Connect green ground wire (G) to frame with green ground screw (20). Be sure green ground wire terminal faces up or wires could get caught in shroud. (see illustration, page 25.)
3. Install manifold (43) with two screws (4).
4. Install control board, **Control Board Replacement, page 19.**
5. Install drive housing. **Drive Housing Replacement, page 15.**
6. Install pump. **Displacement Pump Replacement, page 13.**

![Motor Replacement Diagram]

**Liberally apply grease**

- Gear cluster may stay engaged in motor front end bell or drive housing.
- Ensure screws and parts are tightened securely.

Airlessco Standard Warranty

Airlessco warrants all equipment referenced in this document which is manufactured by Airlessco and bearing its name to be free from defects in material and workmanship on the date of sale to the original purchaser for use. With the exception of any special, extended, or limited warranty published by Airlessco, Airlessco will, for a period of twelve months from the date of sale, repair or replace any part of the equipment determined by Airlessco to be defective. This warranty applies only when the equipment is installed, operated and maintained in accordance with Airlessco’s written recommendations.

This warranty does not cover, and Airlessco shall not be liable for general wear and tear, or any malfunction, damage or wear caused by faulty installation, misapplication, abrasion, corrosion, inadequate or improper maintenance, negligence, accident, tampering, or substitution of non-Airlessco component parts. Nor shall Airlessco be liable for malfunction, damage or wear caused by the incompatibility of Airlessco equipment with structures, accessories, equipment or materials not supplied by Airlessco, or the improper design, manufacture, installation, operation or maintenance of structures, accessories, equipment or materials not supplied by Airlessco.

This warranty is conditioned upon the prepaid return of the equipment claimed to be defective to an authorized Airlessco distributor for verification of the claimed defect. If the claimed defect is verified, Airlessco will repair or replace free of charge any defective parts. The equipment will be returned to the original purchaser transportation prepaid. If inspection of the equipment does not disclose any defect in material or workmanship, repairs will be made at a reasonable charge, which charges may include the costs of parts, labor, and transportation.

THIS WARRANTY IS EXCLUSIVE, AND IS IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.

Airlessco’s sole obligation and buyer’s sole remedy for any breach of warranty shall be as set forth above. The buyer agrees that no other remedy (including, but not limited to, incidental or consequential damages for lost profits, lost sales, injury to person or property, or any other incidental or consequential loss) shall be available. Any action for breach of warranty must be brought within two (2) years of the date of sale.

AIRLESSCO MAKES NO WARRANTY, AND DISCLAIMS ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IN CONNECTION WITH ACCESSORIES, EQUIPMENT, MATERIALS OR COMPONENTS SOLD BUT NOT MANUFACTURED BY Airlessco. These items sold, but not manufactured by Airlessco (such as electric motors, switches, hose, etc.), are subject to the warranty, if any, of their manufacturer. Airlessco will provide purchaser with reasonable assistance in making any claim for breach of these warranties.

In no event will Airlessco be liable for indirect, incidental, special or consequential damages resulting from Airlessco supplying equipment hereunder, or the furnishing, performance, or use of any products or other goods sold hereto, whether due to a breach of contract, breach of warranty, the negligence of Airlessco, or otherwise.

FOR AIRLESSCO CANADA CUSTOMERS
The Parties acknowledge that they have required that the present document, as well as all documents, notices and legal proceedings entered into, given or instituted pursuant hereto, be drawn up in English. Les parties reconnaissent avoir convenu que la rédaction du présent document sera en Anglais, ainsi que tous documents, avis et procédures judiciaires exécutés, donnés ou intentés, à la suite de ou en rapport, directement ou indirectement, avec les procédures concernées.
