

Crop's, a Belgian company located in Ooigem, produces sauces, bakery supplies, fruit concentrates and other foodstuffs. They needed a good solution to pump 2 different types of sauces from an IBC container (1000L) to 2 different hoppers (stock). The system had to be mobile and automated, with an automatic level meter.

Mobile and automated system

A local Graco distributor, Atlantic Engineering, took up this challenge and used Graco equipment for a high quality solution. They proposed a tailored system using the Graco SaniForce HS 3150 pump. This is one of the new pumps from the SaniForce range launched in autumn 2011 which was implemented on a mobile skid with valves and sensors to meet the requirements of the customer.

Increased safety for workers

The system was installed on-site by Atlantic Engineering for testing only. However, the results were so satisfying for Crop's, that it never left the factory! The full system was purchased and another investment including two additional SaniForce HS pumps is planned in 2013.
