CONTENT

Graco is a world leader in systems and components for fluid handling. Since 1926 we have been offering products that move, measure, control, dispense and apply a wide range of fluids and viscous materials. Graco owes its success to its unwavering commitment to technical excellence, the high quality of its manufacturing and its customer service. The company works exclusively with qualified distributors to provide equipment for spray finishing, protective coating, paint circulation, lubrication, and dispensing sealants and adhesives, along with power application equipment.

Airless or HVLP

WHEN TO CHOOSE WHICH SPRAYER?

Whether you want to spray a radiator, a door, a wall or indeed, a complete house, the correct paint sprayer is essential for a consistent and professional finish. But when should you use an airless sprayer and when is it best to use an HVLP unit? We pit them against each other.

Both an airless and an HVLP sprayer allow you to apply paint flawlessly. They make for a smoother, more attractive finish compared to traditional painting methods. Yet, in certain situations, it is better to use an airless rather than an HVLP sprayer, and vice versa. On the basis of three relevant factors, we explain the difference.

FACTOR 1 The kind of paint job

Airless sprayers can spray litres of paint in just minutes. They are, therefore, better suited for jobs where speed is more important than detail. They are mainly used by professional contractors for large paint jobs, such as walls, facades or indeed, entire buildings. Unlike their airless counterpart, HVLP sprayers atomize less paint. Therefore, they are better suited for more detailed and finer painting. Radiators, furniture or doors spring to mind.

FACTOR 2 The material sprayed

The type of materials that you spray is crucial in the choice between airless or HVLP. Airless sprayers can spray virtually all materials, ranging from thin varnishes, stains, lacquers right through to thick ceiling and wall paints. Due to high pressure, the majority of paints do not even have to be diluted. HVLP sprayers, however, can only handle thin materials, like varnishes, stains, lacquers and diluted paints. So for undiluted thick materials, you always need an airless sprayer.

FACTOR 3 Control of the spraying

For projects that require a superior level of finish – such as retouching and repairs – HVLP sprayers are better suited, because their paint spraying is much more precise. With airless sprayers, atomization is not as controllable. Moreover, they require slightly more preparation, because the surface and adjacent areas must be taped.

Airless Air-Assisted: where airless and HVLP meet

In an HVLP sprayer (High Volume Low Pressure), paint is atomized by air. The pressure of that air is below 1 bar – the volume and velocity of air for atomization. Airless paint sprayers work without air (hence “airless”). They atomize the material by the very high pressure (130-230 bar) developed to squeeze

through a nozzle. You can also choose Airless Air-Assisted (AAA) sprayers. Then both techniques are combined in the same sprayer. In terms of pressure and level of finish, AAA sprayers are somewhere between airless and HVLP sprayers.

AIRLESS

VS

HVLP

Airless and HVLP sprayers are complementary to each other. The choice of one in favour of the other depends on your paint job. If you want to spray large areas quickly and efficiently, then opt for airless. If, on the other hand, you have a paint job where finish prevails, then HVLP is the sprayer you are looking for.

Faster

thanks to high pressure

For thin and thick materials, no dilution required
(varnishes, stains, lacquers and emulsions)

Especially suited for **big jobs**
(such as walls or facades)

Spray paint in **one opaque layer**

More detailed

thanks to low pressure

Mainly for **thin materials**
(varnishes, stains and lacquers)

Suitable for **finer paintwork**
(such as radiators, doors, garages, shutters)

Multiple layers
needed

What is the professionals' verdict?

On the following pages, we present our latest Fine Finish sprayers and give the floor to professional painters/decorators. They explain why and when they use their airless or HVLP sprayers.

ZOOMING IN ON GRACO'S 'FINE FINISH' IMPROVEMENTS

The nature of your paint jobs can differ considerably. Big or small, indoors or outdoors, lacquer or emulsion, you expect a flawless result each time. At Graco, therefore, we constantly consider how we can extend our range, improve and innovate.

THE NEW GX™ FF

The GX FF is our latest, extremely affordable 'Fine Finish' sprayer. This airless sprayer is much lighter than all competing systems and is perfect for finishing surfaces that require a very precise finish, such as wood and metal. If you are looking for unmatched quality at an unbeatable price, then look no further.

- ✓ The **5.7 litre hopper** is ideal for spraying small areas. In combination with the thin, short hose (3/16" x 7.5 m) you can spray anything from 1 litre of paint.
- ✓ The **ProX™ Power piston pump** is an extremely durable piston pump. Thanks to the ProXChange™-system, you can easily replace the pump yourself.
- ✓ The **RAC X Fine Finish Switch Tip** with dual atomization provides a softer spray pattern so you can better check the layer thickness in overlaps.
- ✓ The **contoured handle of the FTx™ spray gun** ensures optimum control and maximum comfort when spraying.

It felt like I was working 100 times faster.

GABRIEL FISCHER, OWNER OF GABRIEL FISCHER RAUM UND BODEN

A MARK V™ MAX PLATINUM, an ST™ MAX 395 and an HVLP 3800™: Gabriel Fischer's equipment reveals he is a Graco fan. His latest acquisition is another piece of Graco equipment: the GX FF. "It's true, I have been using Graco sprayers for years," admits Gabriel. "Their quality and durability

are just second to none!" So the latest acquisition did not disappoint. "I bought the GX FF for a fairly large job where I was asked to apply a coat of lacquer on old doors. It felt like I was working 100 times faster. The end result was excellent, and the client was very pleased indeed!"

THE RENEWED HVLP SERIES

Our HVLP sprayers were designed with one goal in mind: to make paint spraying easy. "Plug & Spray" is what we call it: just fill up the material cup, switch on the unit and start! This new generation of HVLP sprayer obviously remains perfect for a fine finish. If anything, the equipment is even more efficient, lighter and quieter.

✓ The Edge® II gun

Thanks to the **Flex Liner™ Bag-system**, you can spray paint 360°, so even upside down.

Thanks to the **EasyGlide™ technology**, you require 75% less power than with other guns.

The new **Edge II gun** sprays 4 times as much material.

✓ The new TurboForce™ II-turbine

The new **TurboForce II-turbine** is not only 30% more efficient, it is also 15% quieter.

The '**Tough Box**'-design protects the turbine better during the job and transport.

Thanks to the **Smart Start technology** of the ProContractor series, the turbine automatically shuts off when you stop spraying.

✓ The Super-Flex™ hose

The **Super-Flex hose** of 6 m (Standard series) or 9 m (ProContractor series) is 20% lighter than hoses from other brands. It is easy to connect them to the gun, without any fittings.

The result was simply stunning.

DAVID DEAN, OWNER OF DAVID DEAN DECORATING

With more than 34 years of experience under his belt and his own painting company, David Dean has little to learn when it comes to painting. Even paint spraying holds no secrets for him anymore after ten years. For a new house, David was asked

to coat 16 oak doors with two layers of varnish. The contractor decided to have the doors painted on site; as they were cheaper to buy untreated. "A perfect job for my HVLP", David said: "In one hour and twenty minutes, I was ready – with a roller and brush, that would have taken me eight hours. And the result ... was just stunning."

David's son Jonathan

FINISHPRO™ II: TWO SPRAYERS IN ONE

Although the FinishPro II is not new, we would still like to put it in the spotlight. After all, the FinishPro II offers the best of both worlds: You can use the sprayer air-assisted, but also airless. Which spray mode you choose depends on your paint job. You can use the FinishPro II for spraying both light and heavy material, directly from the bucket with minimal overspray. This makes the sprayer suitable for both residential and commercial projects.

Better and healthier results for Wim Woudenberg

The manpower which traditional rollers require, is now being taken over by the sprayer.

WIM WOUDENBERG, OWNER OF SCHILDERSBEDRIJF WIM WOUDENBERG

Wim Woudenberg's paint company celebrated its tenth anniversary in the summer of 2016. High time to switch to airless spraying, thought founder and owner Wim. His first reaction is positive.

"After ten years of painting in the traditional way, it was just time to switch to spray painting", Wim began his story. "To finish projects faster, and also for health reasons." He chose the FinishPro™ 595 PC PRO with roller.

Especially walls and ceilings

When Wim uses his FinishPro 595 depends on the space and size of the project: "I use the sprayer mostly for painting walls and ceilings. It's quicker and I can deliver a smooth finish. And the

texture that you obtain is much nicer than if you were to use a manual roller."

Ergonomic benefit

Wim also made headway ergonomically speaking: "Due to using a manual roller, my arm had been in pain for a while. I even wondered how long I would still be able to carry on. But with the FinishPro 595, those problems are now a thing of the past. The manpower which traditional rollers require is now being taken over by the machine."

On rare occasions the traditional way

Only for small paint jobs does Wim choose in favour of the traditional roller. "But only if it takes more time to tape everything off, start the unit and clean it than the actual painting," he concludes.

NEW

THE NEW RAC X™ FF LP TIPS

For a clean finish, you not only need the right equipment, the spray tip is essential. “Despite their importance, painters still buy their tips too often based on the price. That

means that many tips being used are of a lesser quality. With our new RAC X FF LP Tips, we are now launching tips which we think painters will find the extra benefits difficult to ignore.

They are available for the smallest handsets to the largest airless sprayers,” says Global Marketing Manager Accessories **Mark Andersen.**

What makes the RAC X FF LP Tips so special?

“The new RAC X FF LP Tips offer the same basic benefits as the ‘old’ (green) FFA RAC X tips,” says Mark. “The big difference is that with the new RAC X FF LP Tips, you use 30 to 50% less pressure. And spraying with lower pressure provides additional benefits.”

✓ **Better finish**

“The paint is sprayed more evenly, without getting stripes on the side of the spray fan. You have more control over the thickness and can avoid ‘runners’ more easily.”

✓ **Increased reliability**

“The RAC X FF LP Tips allow you to spray all materials, the result will always be elegant. They are also much more efficient in cold temperatures.”

✓ **Less overspray**

“The softer, better-managed spray fan also ensures that you have less overspray. So it prevents you from using too much paint.”

✓ **Longer life**

“Less pressure also means less pressure on the sprayer. Your pump and spray tip wear out less quickly, so you can use them longer.”

Revolutionary design...

OLD NEW

Design with pre-opening

... for an even better result

OLD NEW

Softer, better managed spray fan

NEW

ULTRAMAX™ AIRLESS HANDHELD DC

The UltraMax Airless HH DC is our newest portable cordless airless handset. It will become the ultimate sprayer for your repairs and quick chores up to 50 m2. It is not only a perfect fit for the palm of your hand, it is also 15% lighter than its predecessor. Moreover, you use it for both water- and solvent-based paints and varnishes. The UltraMax Airless HH DC is ready to spray within seconds, you do not even need to dilute the material for a perfect finish.

Triax™ Piston pump

The Triax Piston pump made from durable stainless steel will always guarantee a professional finish, whatever you spray. And with the ProConnect system, you can replace the pump yourself in seconds.

ProControl™ II technology

With the ProControl II technology, you can adjust the pump speed to your needs: low speed (and small tip) for precision work, a higher speed (and larger tip) for more flow.

SmartControl™ pressure control

The SmartControl pressure control keeps your set pressure constant. That way, you always have the optimum pressure for the material you spray, overspray is reduced and the battery's life is extended.

FlexLine™ paint system

With the FlexLine cups and bags, it is easy to keep your sprayer clean. You decant the paint into the bag and afterwards, you can dispose of them or recycle them. The system also ensures that you can spray 360°.

DeWalt XR lithium-ion battery

The UltraMax Airless HH DC has a DeWalt XR lithium-ion battery. Your advantage? It is easy to buy a replacement battery – with or without more capacity – and you can use the battery/ies in other appliances.

Our other Ultra-handheld sprayers...

ULTRA® AIRLESS HANDHELD CORDED AC

This sprayer is the same as the Ultra Airless HH Cordless DC, but has a power cord instead of an 18V battery.

ULTRA® AIRLESS HANDHELD CORDLESS DC

The lower priced version of the UltraMax. This sprayer only sprays water-based wall paints and lacquers without dilution.

www.graco.com/ultra

The UltraMax Airless HandHeld DC combines all the benefits of airless spraying in one compact, portable device. Ideal for repairs and smaller paint jobs.

RAF WILLEN, PRODUCT MANAGER AT GRACO

Tested for you: the UltraMax Airless HandHeld DC

There is testing and testing. When Simone Adams had the chance to try out the UltraMax Airless HandHeld DC, she took her job more than seriously.

“I didn’t just take the UltraMax Airless HandHeld DC to one of our sites,” Simone started her story. “I first explored the sprayer’s possibilities at our workshop. I tested it with some paints and quickly saw its potential.” She subsequently used the UltraMax on the job. “A new building, where both the windows and walls needed painting.”

Convenient pressure control

The pressure control particularly jumped out at me. Simone: “Depending on the application and the space in which you have to paint, you can adjust the pressure. The larger the space, the higher you can set the pressure. A small storage room, for example, I sprayed on a setting of 2-3, the windows on 5-6 and the walls on setting 8-10. Whatever the setting, the UltraMax always delivers enough power. That pressure control is a huge asset.”

Especially for smaller jobs

For big jobs, Simone will continue to use other sprayers. “But for

repairs and smaller jobs, such as windows and some interior walls, it really is the perfect sprayer. It’s a handset, so I think you get the most out of it if you take the battery version. Then you can really work in complete freedom. Moreover, the unit is very easy to clean,” she concludes.

APPLYING TEXTURED MATERIAL

Making your work easier, even when you apply thin plasters or textured materials. To do this, we listened to you, the end user. This resulted in new sprayers, like the APX series and updates of existing sprayers, like the RTX series.

THE NEW APX™ 6200 & APX™ 8200

Thick materials that refuse to feed into the pump, uncontrollable spray fans when using undiluted materials ... These are problems which end users faced when applying thin plaster. We put the feedback to good use and designed a completely new texture sprayer: the APX. Here, you will discover what makes the APX 6200 and its big brother, the APX 8200, so unique.

✓ Strong, modular frame

Thanks to its steel frame, the APX can take a beating. Yet, it is lightweight and easy to handle by one person. In addition, you can remove the hopper and pump without any tools.

✓ SmartControl™ 3.0

APX has powerful, brushless DC motors. Thanks to the SmartControl 3.0 technology, you can adjust the pressure with a single switch. The digital display shows the pressure level and how many litres you are spraying.

✓ NEW: Vibra Flo™ shaker hopper

The shaker hopper ensures a constant material flow. Even the toughest materials get to the pump easily. Mixing and diluting are almost superfluous.

✓ Optimized Endurance pump

The APX boasts a powerful pump that sucks up the material. The 207 bar ensures that you can spray nearly all texture materials. Also in terms of life, the pump scores better.

APX 6200 ▲

- 4 bags in the hopper
- 1.85 kW (2.5 pk)
- 6 litres/minute

APX 8200 ►

- 6 bags in the hopper
- 3 kW (4 pk)
- 8 litres/minute

Interested in our new texture sprayers?

Find a distributor near you via the tab 'Where to buy' on www.graco.com.

IS EVEN EASIER

NEW: Bag roller

The perfect accessory! Fit the bag roller above the hopper to squeeze the last bit of material from the bag as efficiently as possible. Tip: you can tailor it perfectly to the length of the material bag.

NEW: Flo™ hose

The APX comes with a customized hose which absorbs pulsations in the spray pattern even better. It delivers a constant flow of material to the special HD Inline texture gun.

Our other texture sprayers

Mark Max

A versatile electric airless unit to apply paint, plaster and flame-retardant materials

T-Max™

The best choice if you want to spray both premixed plasters, decorative materials, like powder plaster

RTX™ 5500

The perfect solution for interior and exterior finishes and decorative materials

The advantages of the new APX series in a nutshell

- Cheaper to buy
- Can spray all thin plasters
- Superior, consistent finish
- Small and lighter than similar sprayers
- Cheaper to maintain than similar sprayers
- Easy to use and maintain

FROM NOW ON FUME-FREE LINE STRIPING

The LineLazer series already met your needs adequately before. That does not mean that we have rested on our laurels. We want to improve not only your end result, but also the actual experience of doing the job. That is why we have launched the LineLazer™ ES 1000, an innovation within the line-striping equipment.

THE NEW LINELAZER ES 1000

The LineLazer ES 1000 is a powerful innovative line marker, our first line marker based on battery technology. This is not only better for the environment, it also gives you yet other – unique – benefits.

Options to extend

Depending on the requirements of the workplace, you can expand your LineLazer ES 1000:

- A **lazer pointer** to follow preliminary marks and apply even cleaner lines
- A **glass bead system** to apply lines and glass beads at night
- A **LineDriver™** to apply lines outdoors over long distances tirelessly
- A **second battery** to increase your litre capacity per day or to connect a safety lamp

✓ Fume-free striping

The traditional combustion engine has been replaced by batteries. So no more fumes. You can also use the LineLazer ES 1000 in environments where previously, the work had to be done manually or, worse, you had to turn it down, for example, due to the risk of contaminating the goods.

✓ No sound of a combustion engine

A combustion engine used indoors can make for unwanted noise (and its reverberation). With the LineLazer ES 1000, the work can be done in almost complete silence. It makes for a more enjoyable work environment for you and those around you.

✓ Cleaner lining

If you draw stripes electrically, it means that there is no combustion engine that can cause vibrations. And no vibrations, in turn, mean cleaner lines. The LineLazer ES 1000 guarantees a flawless finish.

✓ One unit for inside and out

Since the LineLazer ES 1000 makes no noise, you can use it both indoors and outdoors, day and night. You want to do line-striping in an underground garage or a logistics centre during the day and apply lines along roads in a village at night? You can do it all with the same unit, without hindering your direct and indirect environment.

Tested... and approved!

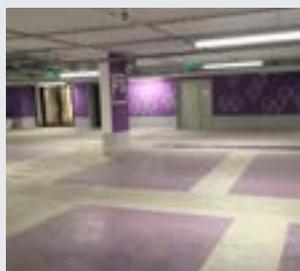

“The perfect solution for our shops and depots”

“With the LineLazer ES 1000, we found the perfect solution for applying lines in our stores and depots. The fact that the machine is not powered by an internal combustion engine, but a battery, offers many advantages. There are no health or safety risks, the

equipment is easy to operate and makes no noise. And because it doesn't vibrate, the result is even better.”

Painting more quickly with the JetRoller™

EFFICIENCY AT LONELY HEIGHTS

‘Always looking to improve’, is no empty promise at Pijl Vastgoedonderhoud. “Every new project we take on, we examine how we can arrive at the best result in the most efficient way possible”, says manager Maarten Timmermans. “Especially with a contract like this one in Rotterdam, this is crucial.”

What began almost a century ago as a small painting company, has grown into an all-encompassing maintenance company. “We tackle all possible facade works,” says Maarten Timmermans, Managing Director at Arrow Property Maintenance. “From small to large, from painting only to complete renovation. We particularly like projects in which we’re involved from day one.

Sitting together with the client, brainstorming together, creating concepts ... that’s when we are at our best!”

Remain within the agreed budget

Also for this Rotterdam project, the brainstorming stage proved invaluable. Maarten: “Since it was a tender-based project, we had to be able to complete it within the agreed budget. Unforeseen

With the JetRollers we can paint a facade in less than a day. Manually, it would take you about three days.

MAARTEN TIMMERMANS, PIJL VASTGOEDONDERHOUD MANAGER

Thanks to the JetRoller, the painters/decorators don't need to lug buckets of paints upstairs.

Pijl Vastgoedonderhoud has used over 1,500 litres of paint for the make-over.

additional work would have been at our expense, for sure. Working efficiently was, therefore, an absolute must.”

To deliver a flawless result within budget, Pijl Vastgoedonderhoud relied on Graco. Maarten: “We have a Mark VII and an UltraMax 1095, but we mainly use them for private villa construction work and for interior projects. It was the first time we tackled an outside project of this scale with our Mark VII.”

JetRollers to save time and increase efficiency

When Maarten asked Graco for advice, it was suggested we work with two 18 cm JetRollers. “With the Graco pump and JetRollers, we can spray and roll in a single movement, and save a lot of time

that way! That’s how we were able to paint a facade in less than a day. If you’d use a manual roller for the same job, it would take about three days. Also, the display shows how many litres of paint have been used. So we can prove to the client that we’re using enough paint.”

Less strain on the staff

Besides the price, it was also ease-of-use that was the deciding factor for choosing Graco. “It’s true, another advantage is that my staff are less stressed,” says Maarten. “They don’t have to lug paint buckets upstairs. This doesn’t only save time, it also makes the work easier. And the equipment is incredibly easy to clean.” ■

JETROLLER

A flexible and lightweight tool to make paint jobs using the roller more efficiently

- Combines rolling and spraying in one movement
- Prevents splashing and dripping
- Having to dip the roller into the paint is a thing of the past
- The length of the roller can be adjusted, depending on the project
- Less preparation, because virtually no overspray

For more information, please visit jetroller.graco.eu.com

PIJL VASTGOEDONDERHOUD

- Established in June 1923
- Operates from Zwijndrecht, The Netherlands
- backed by 55 permanently employed
- Specialised in maintenance painting/decorating and facade maintenance

THIS IS YOUR OPINION ABOUT THE CONTRACTORMAG

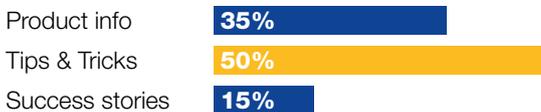

Does ContractorMag meet your expectations and what topics interest you the most? On the basis of a short survey, we asked your opinion about this magazine. And the results were clear-cut. We are grateful to everyone who participated in the survey. Thanks to you, we know how we can make ContractorMag even more interesting.

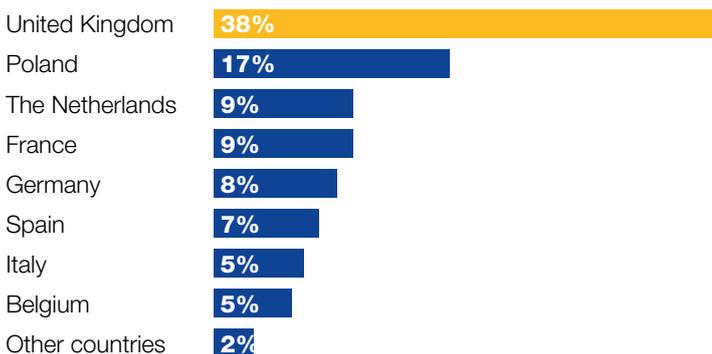

What do you think of this magazine?

What information would you like to see in this magazine?

From which countries came the biggest response?

Winner of the GX™ 21

“NEVER THOUGHT I’D WIN. I JUST ENTERED FOR FUN.”

‘What would the ultimate GX look like’, we asked in this magazine’s previous edition. The person who submitted a design and yielded the most votes was able to take one home straight away. And meanwhile, we have a winner: Ralf Metze.

Ralf’s winning design

Having been a painter/decorator for 29 years, Ralf has always used Graco equipment – the company he works for has six no less. When he saw the competition in the magazine, he decided to enter for fun. “I never thought I’d win. To get some votes, I shared my design on Facebook, in the group Maler und Lackierer - Mit Herz und Seele. Apparently with success”, smiles Ralf.

We wish Ralf all the best with his new GX!
