

The purpose of the Graco Industrial Finishing demonstration and training lab is to provide customers with a resource to develop final validation of Graco finishing equipment before making an investment in new equipment. Customers often need a final validation before getting management approval and this service provides a way for customers to reduce risk and prove their investment will be successful. Some customers have complicated automated processes, and utilize the lab to prove out Graco equipment without disrupting their current production lines. Other customers are trying a new coating, and want to verify that the equipment will perform as needed. Many customers want to see and operate the equipment in person. No matter the reason, Graco has the resources and people needed to help customers as they improve their system and obtain their desired results.

Graco Industrial Finishing Demonstration and Training Lab

Equipment and Resources:

- Access to Graco Industrial Finishing equipment
- Multiple spray booths including 11' H x 20' W dry filter booth
- Multiple paint robots and reciprocator
- Large gas fired process oven (8' W x 9' L x 9' H)
- Small electric process oven (24" W x 18" L x 18" H)
- Lab technicians with robot programming capability

The Graco Industrial Finishing demonstration and training lab is located at the Graco world headquarters and technical center in Minneapolis. This facility contains our research and development team, but also serves as the worldwide manufacturing location for many of our industrial finishing products. This provides a unique customer experience for those that visit by providing a complete behind the scenes view of Graco. Our goal is ensure our customers are confident in the performance of our products, but also confident in Graco as a long term partner.
