## HydraMax<sup>®</sup> Sprayers

### HydraMax 225

3600 psi (248 bar, 24.8 MPa) Maximum Working Pressure

Model	Series	Direct Immersion	30 Gallon Suction	RAC <sup>®</sup> X, Silver Gun and Hose
233640	C	X		
233641	C		X	
233642	C	X		X
233643	C		X	X

### HydraMax 300

3600 psi (248 bar, 24.8 MPa) Maximum Working Pressure

Model	Series	Direct Immersion	30 Gallon Suction	RAC X, Silver Gun and Hose
233650	C		X	
233651	C		X	X

### HydraMax 350

4000 psi (276 bar, 27.6 MPa) Maximum Working Pressure

Model	Series	Direct Immersion	30 Gallon Suction	GHD, Texture Gun and Hose
233660	C		X	
233661	B		X	X

## ⚠ WARNING

**Fire and explosion hazard:** Solvent and paint fumes can ignite or explode.

To help prevent a fire and explosion:

- Use only in an extremely well ventilated area.
- Eliminate all ignition sources; such as pilot lights, cigarettes and plastic drop cloths (static arc hazard). Do not plug or unplug power cords or turn lights on or off in spray area.
- Ground Sprayer, object being sprayed, paint and solvent pails.
- Hold gun firmly to side of grounded pail when triggering into pail.
- Use only conductive airless paint hose.
- Do not use 1,1,1-trichloroethane, methylene chloride, other halogenated hydrocarbon solvents or fluids containing such solvents in pressurized aluminum equipment. Such use could result in a chemical reaction, with the possibility of explosion.
- To reduce risk of electric shock, use grounded outlet only. Shut OFF and unplug when repairing.

**Fluid injection and high pressure hazard:** High pressure spray or leaks can inject fluid into the body.

To help prevent injection, always:

- Engage trigger safety latch when not spraying.
- Keep clear of nozzle and leaks.
- Never spray without a tip guard.
- Do **PRESSURE RELIEF** if you stop spraying or begin servicing sprayer.
- Do not use components rated less than sprayer *Maximum Working Pressure*.
- Never allow children to use this unit.

**SKIN INJECTION HAZARD!** If high pressure fluid pierces your skin, the injury might look like "just a cut". But it is a serious wound! Get immediate surgical treatment.

## ⚠ MISE EN GARDE

**Danger d'incendie et d'explosion :** les gaz de solvant et de peinture peuvent s'enflammer ou exploser.

Pour éviter les risques d'incendie et d'explosion :

- N'utiliser l'appareil que dans une zone extrêmement bien aérée.
- Éliminer toute source d'inflammation ; telle que veilleuses, cigarettes et arcs d'électricité statique créés par les toiles de peintre en plastique. Ne pas brancher et débrancher de cordons électriques, ou allumer et éteindre des lumières dans la zone de pulvérisation.
- Mettre à la terre le pulvérisateur, l'objet à pulvériser ainsi que les seaux de peinture et de solvants.
- Tenir le pistolet fermement contre la paroi d'un seau mis à la terre lorsqu'on pulvérise dans le seau.
- N'utiliser qu'un flexible pour peinture pulvérisée sans air.
- Ne jamais utiliser de trichloroéthane 1,1,1, de chlorure de méthylène, d'autres solvants à base d'hydrocarbures halogénés, ni de produits contenant de tels solvants dans un équipement sous pression en aluminium. Cela pourrait provoquer une réaction chimique avec risque d'explosion.
- Pour réduire le risque de décharge électrique, employez la sortie au sol seulement. Coupez et débranchez quand la réparation.

**Danger d'injection de fluide et haute pression :** la pulvérisation sous haute pression ou les fuites peuvent injecter des fluides dans le corps.

Pour éviter les risques d'injection, toujours :

- Bloquer le loquet de sécurité de la gâchette à la fin de la pulvérisation.
- Se tenir loin de la buse et des fuites.
- Ne jamais pulvériser sans anti-gouttes.
- **DÉCHARGER LA PRESSION** à la fin de la pulvérisation ou avant de réparer le pulvérisateur.
- Ne pas utiliser de composants dont la pression nominale est inférieure à la *pression maximale de service du système*.
- Ne jamais permettre aux enfants d'utiliser cet appareil.

**Si un fluide haute pression perce la peau,** la blessure peut paraître une "simple coupure". Mais il s'agit bien d'une lésion grave! Consulter immédiatement un médecin.

## ⚠ ADVERTÊNCIA

**Perigo de incêndio e explosão:** os solventes e os vapores da pintura poderão explodir ou incendiá-los.

Para ajudar a evitar incêndio e explosão:

- Utilize unicamente em áreas extremamente bem ventiladas.
- Elimine todas as fontes de ignição, tais como luzes piloto, cigarros e arcos de estática resultantes dos plásticos de proteção. Não ligue nem desligue os cabos de alimentação ou as luzes numa área de pulverização.
- Ponha em contato com a terra o pulverizador, o objeto a ser pulverizado, e os baldes de tinta e de solventes.
- Segure a pistola firmemente de encontro ao lado do balde em contato com a terra, quando estiver descarregando para dentro do mesmo.
- Utilize somente tubos flexíveis condutores para pintura a alta pressão.
- Não utilize 1,1,1-tricloroetano, cloreto de metíleno, outros solventes de hidrocarbonetos halogenados ou líquidos contendo tais solventes em equipamento de alumínio pressurizado. Tal utilização poderá resultar numa reação química, com possibilidade de explosão.
- Para reduzir o risco de choque elétrico, use a tomada aterrada somente. Feche FORA e desconecte ao reparar.

**Perigo de injeção de líquidos à alta pressão:** a pulverização ou vazamentos à alta pressão podem injetar líquido no corpo.

Para ajudar a evitar injeção de líquido, faça sempre o seguinte:

- Engate o trinco de segurança do gatilho quando não estiver pulverizando.
- Mantenha-se afastado dos bocais e locais onde há vazamentos.
- Nunca pulverize sem que haja uma proteção na extremidade.
- **ALIVIE A PRESSÃO** quando parar de pulverizar e antes de iniciar a manutenção do pulverizador.
- Não utilize componentes com uma classificação inferior à do pulverizador *Pressão Máxima de Trabalho*.
- Nunca permita que crianças utilizem esta unidade.

**Se o líquido a alta pressão penetrar na sua pele,** o ferimento poderá parecer "simplesmente um corte". Mas é um ferimento grave! Procure o médico imediatamente.

## ⚠ ADVERTENCIA

**Peligro de incendio o explosión:** Los gases de los disolventes y de la pintura pueden inflamarse o provocar una explosión.

Para prevenir incendios y explosiones:

- Use únicamente en un área muy bien ventilada.
- Suprima todas las fuentes de ignición; como luces piloto, cigarrillos y arcos estáticos de carpetas plásticas para protección contra pintura. No enchufe ni desenchufe cables de alimentación ni apague ni encienda las luces en un área de pulverización.
- Ponga a tierra el pulverizador, el objeto que recibe el chorro pulverizado, las cubetas de pintura y disolvente.
- Sostenga firmemente la pistola a un lado de la cubeta puesta a tierra cuando dispare dentro de ella.
- Use solamente mangueras para pintura conductora sin aire.
- No utilice nunca tricloreto-1,1,1, cloruro de metíleno ni otros disolventes a base de hidrocarburos halógenos o fluidos que contengan dichos disolventes en un equipo a presión de aluminio. El uso de estas sustancias puede provocar una intensa reacción química, con riesgos de explosión.
- Para reducir el riesgo de la descarga eléctrica, utilice el enchufe puesto a tierra solamente. Apague y desenchufe al reparar.

**Peligro de inyección de fluido y alta presión:** por la pulverización o las filtraciones a alta presión se pueden inyectar fluidos en el organismo.

Para prevenir la inyección en la piel, siempre:

- Enganche el seguro del gatillo cuando no use el pulverizador.
- No se acerque a la boquilla ni a las filtraciones.
- Nunca aplique fluido pulverizado sin un guardaboquilla.
- Realice el **ALIVIO DE PRESIÓN** si deja de pulverizar fluido o repare el pulverizador.
- No use componentes de capacidad nominal inferior a la *presión máxima de operación del pulverizador*.
- No permita que niños usen esta unidad.

**Si fluido de alta presión le penetra la piel,** la lesión podría parecer "sólo un corte". ¡Es una lesión seria! Consulte de inmediato al médico.

# General Repair Information

## ⚠ WARNING

### MOVING PARTS HAZARD

To reduce risk of serious injury, do not touch moving parts with fingers or tools while testing repair. Shut off sprayer when repairing. Install all covers, gaskets, screws and washers before operating sprayer.

## ⚠ WARNING

### HOT SURFACES HAZARD

### EXPLOSION HAZARD

Hydraulic reservoir and engine may be very hot during operation and could burn skin if touched.

Flammable materials spilled on hot engine could cause fire or explosion. Have fan shroud in place during operation to reduce risk of burns, fire or explosion.

## ⚠ CAUTION

To reduce risk of pressure control malfunction:

- Use needle nose pliers to disconnect wires. Never pull on wire, pull on connector.
- Mate wire connectors properly. Center flat blade of insulated male connector in female connector.
- Route wires carefully to avoid interference with other connections of pressure control. Do not pinch wires between cover and control box.

1. **Keep all screws, nuts, washers, gaskets, and electrical fittings removed** during repair procedures. These parts are not normally provided with replacement assemblies.
2. **Test repair** after problem is corrected.
3. **If sprayer does not operate properly**, review repair procedure to verify procedure was done correctly. If necessary, see Troubleshooting Guide, page 5, for other possible solutions.

4. **Install fan shroud before operation** of sprayer and replace if damaged. Fan shroud directs cooling air around reservoir to prevent overheating. It can also reduce risk of burns, fire, explosion and pinching; see preceding **WARNING**.

## Grounding

Ground sprayer with grounding clamp to earth ground for safe sprayer operation. Fig. 1.

Fig. 1

06250

# Maintenance

## WARNING

### INJECTION HAZARD

The system pressure must be manually relieved to prevent the system from starting or spraying accidentally. Fluid under high pressure can be injected through the skin and cause serious injury. To reduce the risk of an injury from injection, splashing fluid, or moving parts, follow the **Pressure Relief Procedure** whenever you:

- are instructed to relieve the pressure,
- stop spraying,
- check or service any of the system equipment,
- or install or clean the spray tip.

## Pressure Relief Procedure

1. Lock gun trigger safety.
2. Turn engine ON/OFF switch to OFF.
3. Move pump switch to OFF and turn pressure control knob fully counterclockwise.
4. Unlock trigger safety. Hold metal part of gun firmly to side of grounded metal pail, and trigger gun to relieve pressure.
5. Lock gun trigger safety.
6. Open pressure drain valve. Leave valve open until ready to spray again.

*If you suspect that the spray tip or hose is completely clogged, or that pressure has not been fully relieved after following the steps above, VERY SLOWLY loosen tip guard retaining nut or hose end coupling to relieve pressure gradually, then loosen completely. Now clear tip or hose.*

## CAUTION

For detailed engine maintenance and specifications, refer to separate Honda Engines Owner's Manual, supplied.

**DAILY:** Check engine oil level and fill as necessary.

**DAILY:** Check hydraulic oil level and fill as necessary.

**DAILY:** Check hose for wear and damage.

**DAILY:** Check gun safety for proper operation.

**DAILY:** Check pressure drain valve for proper operation.

**DAILY:** Check and fill the gas tank.

**DAILY:** Check that displacement pump is tight.

**DAILY:** Check level of TSL in displacement pump packing nut. Fill nut, if necessary. Keep TSL in nut to help prevent fluid buildup on piston rod and premature wear of packings and pump corrosion.

### AFTER THE FIRST 20 HOURS OF OPERATION:

Drain engine oil and refill with clean oil. Reference Honda Engines Owner's Manual for correct oil viscosity.

**WEEKLY:** Remove engine air filter cover and clean element. Replace element, if necessary. If operating in an unusually dusty environment: check filter daily and replace, if necessary.

Replacement elements can be purchased from your local HONDA dealer.

**WEEKLY/DAILY:** Remove any debris or media from hydraulic rod.

### AFTER EACH 100 HOURS OF OPERATION:

Change engine oil. Reference Honda Engines Owner's Manual for correct oil viscosity.

### SEMI-ANNUALLY:

Check belt tension, page 8; adjust if necessary.

### YEARLY OR 2000 HOURS:

Replace hydraulic oil and filter element with Graco hydraulic oil 169236 (5 gallon/20 liter) or 207428 (1 gallon/3.8 liter) and filter element 244990; page 6.

**SPARK PLUG:** Use only BPR6ES (NGK) or W20EPR-U (NIPPONDENSO) plug. Gap plug to 0.028 to 0.031 in. (0.7 to 0.8 mm). Use spark plug wrench when installing and removing plug.

# Troubleshooting

## WARNING

### INJECTION HAZARD

To reduce risk of serious injury, when instructed to relieve pressure, follow steps 1. - 6.; page 4.

PROBLEM	CAUSE	SOLUTION
Gas engine pulls hard (won't start)	Hydraulic pressure is too high	Turn hydraulic pressure knob ccw to lowest setting
Gas engine will not start	Switch OFF, low oil, no gasoline	Consult engine manual, supplied
Gas engine races to high rpm at stall - bogs down on operation	Engine governor worn	Contact Honda Engine Service Center
Gas engine operates, but displacement pump does not	Directional valve not switching  Pump switch is OFF  Pressure setting too low  Displacement pump outlet filter (if used) is dirty or clogged  Tip or tip filter (if used) is clogged  Hydraulic fluid too low  Hydraulic pump worn or damaged  Displacement pump rod seized by dried paint	Turn pump switch OFF, then ON; manual 309379  Turn pump switch ON  Increase pressure, manual 309378  Clean the filter  Remove tip and/or filter and clean  Shut off sprayer immediately. Add fluid*; page 4.  Bring sprayer to Graco distributor for repair  Service pump; manual 309277
Displacement pump stays in down-stroke	Powered off sprayer with engine ON/OFF. Magnet below bottom sensor.	Start engine. Turn pump switch OFF, then ON. Increase pressure.
Displacement pump operates, but output is low on upstroke	Piston ball check not seating properly. Piston packings worn or damaged.	Service piston ball check; manual 309277. Replace packings; manual 309277.
Displacement pump operates but output is low on downstroke and/or on both strokes	Piston packings worn or damaged. Intake valve ball check not seating properly.	Remove clip and retighten or replace packings; manual 309277. Service intake valve ball check; manual 309277
Paint leaks and runs over side of wetcup	Loose wet-cup Throat packings worn or damaged	Tighten just enough to stop leakage Replace packings; manual 309277
Excessive leakage around hydraulic motor piston rod wiper	Piston rod seal worn or damaged	Replace these parts; manual 309379
Fluid delivery is low	Pressure setting too low  Displacement pump outlet filter (if used) is dirty or clogged  Intake line to pump inlet is not tight  Hydraulic motor is worn or damaged  Large pressure drop in fluid hose	Increase pressure, manual 309378  Clean filter  Tighten  Bring sprayer to Graco distributor for repair  Use larger diameter hose
The sprayer overheats	Cooler is damaged	Replace
	Oil level is low	Fill with oil. See page 6.
Spitting from gun	Air in fluid pump or hose	Check for loose connections on siphon assembly, tighten, then reprime pump
	Loose intake suction	Tighten
	Fluid supply is low or empty	Refill supply container
DTS does not display	Loose wiring	Remove cover and correct poor connections
	Bad LCD or board	Bring sprayer to Graco distributor for repair
DTS displays error codes	Various over-pressure conditions	Page 11

\*Check hydraulic fluid level often. Do not allow it to become too low. Use only Graco approved hydraulic fluid, page 4.

# Hydraulic Pump

## Removal

Relieve pressure; page 4.

1. Let hydraulic system cool before beginning service.
2. Fig 2. Use 3.5 gallon container to catch hydraulic fluid. Remove reservoir drain plug (133) and drain hydraulic fluid.
3. Remove two screws (141) and fan shroud (23).
4. Remove eight screws (136), washers (81) and reservoir cover (50).
5. Remove cooler clip screw (141).
6. Loosen four engine mounting fasteners and belt tension adjustment screw (Fig. 3). Slide engine to left (rear view) to relieve tension on belt (6). Remove belt.
7. Remove two set screws (18) and fan (19).
8. Disconnect hydraulic tube (52) from elbow (54) and hydraulic motor manifold (46).
9. Disconnect strainer (25) with elbows (58, 30) assembled, from elbow (139).
10. Remove case drain tube (67).
11. Turn compensator stem (A) clockwise until stop. Loosen set screw (B). Pull compensator stem out. Remove holder (C), spring (D) and coupler (E).
12. Remove two pump bolts (94) from reservoir.
13. Lift hydraulic pump (2) up and toward front of reservoir to remove.

## Installation

1. Transfer fittings (53, 139) to new pump (2).
2. Place strainer (25) with fittings (30, 58) assembled, into reservoir prior to installing pump.
3. Attach hydraulic tube (52) to pump (2) with elbow (53). Install new o-ring (56) on hydraulic pump flange

4. Fig 2. Set hydraulic pump (2) down and toward rear of reservoir to install.
5. Install two pump bolts (94) in reservoir with copper washers (64) on outside under screw heads. Torque to 31–35 ft-lb.
6. Connect strainer (25) to elbow (139).
7. Connect elbow (54) to hydraulic motor manifold (46). Connect hydraulic tube (52) to elbow (54). Torque hex nuts on elbows (139) and (53) to 38 – 42 ft-lb.
8. Insert spring (D) into coupler (E) and put holder (C) on exposed end of spring. Slide assembly (D, E, C) over compensator stem (A). Align flat on compensator stem with set screw (B). Hold compensator stem knob and torque set screw to 90 in-lb.
9. Install key (F) on pump shaft and install fan (19) with two set screws (18). Fan hub must overhang shaft approximately 0.20 in.
10. Install belt (6). Do **Fan Belt Installation**, page 8.
11. Install reservoir drain plug (133).
  - a. Fill pump with hydraulic oil.
  - b. Install case drain elbow (24) and tube (67).
  - c. Fill reservoir to fill level (approximately 2.75 gallons) with Graco hydraulic fluid.
12. Install reservoir cover (50) with eight washers (81) and screws (136). Torque to 95–100 in-lb.
13. Install cooler clip screw (141).
14. Install fan shroud (23) with two screws (141).
15. Verify hydraulic pump operation:
  - a. Run sprayer with hydraulic motor slow stroking and minimum pressure for 2 minutes.
  - b. Set hydraulic pressure at maximum. Turn pump switch OFF.
  - c. Check for hydraulic oil leaks. Add hydraulic oil as needed.

**Fig. 2**

TI11476b

# Fan Belt

## Removal

1. Fig. 3. Remove two screws (141) and slide shroud (23) up and off of sprayer.
2. Loosen four fasteners on underside of engine (1).
3. Loosen belt tension adjustment screw.
4. Slide engine to left (rear view) to remove tension on belt.
5. Remove belt (6).

## Installation

1. Thread new belt around bottom drive pulley, and install on fan pulley.
  - a. lightly snug four engine fasteners.
  - b. Loosen jam nut on belt tension adjustment screw and slowly tighten screw. (This adjusts belt tension.) Tighten jam nut after belt is properly adjusted.
2. Adjust belt tension to be able to twist belt about 45°.
3. Align engine flush to front of alignment lip. Tighten four fasteners at base of engine.
4. Install fan shroud (23) with two screws (141).

# Pressure Control

## Display and Control Board

### Removal

1. Relieve pressure; page 4.
2. Fig. 4. Remove four screws (100) and pressure control cover (99). Disconnect display connector from control board and remove display.
3. Disconnect wiring from switch (93).
4. Remove two screws (74) and switch panel (97).
5. Remove six screws (72).

6. Disconnect leads and remove control board (315).

### Installation

1. Install control board (315) (Manual 309452) and connect leads.
2. Install six screws (72).
3. Install switch panel (97) with two screws (74).
4. Connect wiring to switch (93).
5. Install display and connect display connector to control board. Install pressure control cover (99) with four screws (100).

Fig. 4

ti1430a

# Pressure Control

## Digital Tracking System™ (DTS)

The DTS contains stored data to assist with job control, troubleshooting and maintenance.

### General

The DTS has Main and Secondary operation menus:

**Main Menu** – Three modes/displays (four if AutoClean is installed). The sprayer automatically enters the Main Menu when the engine starts.

- Pressure – Fluid pressure at sprayer. Pressure is default display and is displayed at start-up.
- Job Gallon – Job material pumped above 1000 psi (70 bar) since Job Gallon was last reset to zero. Counts in 1 gallon or 10 liter increments.
- Lifetime Gallon – Total material pumped above 1000 psi (70 bar) over lifetime of sprayer. Counts in 1 gallon or 10 liter increments.
- AutoClean Shut-Off Timer – Automatically shuts pump off after approximately 4.5 gallons of material have been pumped. Used with AutoClean kit 245159

**Secondary Menu** – Consists of sprayer set-up, and diagnostic tools. To enter this menu requires that you start the engine, hold down the DTS button and turn on the pump switch

### Sprayer Set-Up

- Resettable Hour Meter – Total engine on or running hours since the resettable hour meter was last reset to zero. Counts in 1 hour increments.
- Lifetime Hour Meter – Total engine on or running hours over the lifetime of the sprayer. Counts in 1 hour increments.

- Lifetime Gallon Counter – Total material pumped at all pressures over the lifetime of the sprayer. Counts in 1 gallon or 10 liter increments.

Diagnostic Tools – uP and dn displays indicate whether current is present at proximity sensors

### Diagnostics

#### UP

- UP – displays to indicate no current is present at electronic valve
- Pump moves to up position, and gal LED light indicates a complete circuit to upper proximity sensor

#### dn

- dn – displays to indicate current is present at electronic valve
- Pump moves to down position, and liter LED lights indicates a completed circuit to lower proximity sensor

### Software/Equipment information

There are two informational displays that may be accessed:

Software revision level  
Equipment model number

### Operation

The operation instructions for the DTS are contained in Operation Manual 309378.

# DTS Error Codes

No display does not mean that sprayer is not pressurized. Relieve pressure before repair; page 4.

DISPLAY	SPRAYER OPERATION	INDICATION	ACTION
E:02	Engine runs. Pump stops.	Pressure exceeded 4900 psi (338 bar, 34 MPa)	Correct over-pressure. Check transducer assembly. Take to service.
E:03	Engines runs. Pump operates. No pressure displays.	Pressure transducer faulty, bad connection or broken wire.	Check transducer connection. Open drain valve. Substitute new transducer for faulty one in sprayer. If spray pump fails, replace transducer.
E:07 (AutoClean)	Engine runs. AutoClean timer cancels.	Pressure exceeded 2000 psi (338 bar, 34 MPa) while in AutoClean.	Turn directional valve OFF.
E:07 (Setup)	Engine runs. Setup is exited.	Pressure exceeded 500 psi (34 bar, 3.4 MPa) while in Setup.	Turn directional valve OFF, then ON.
-----	Engine runs. Pump switch OFF	Normal condition	Turn pump switch ON. Increase pressure.

## After a fault, follow these steps to restart sprayer:

1. Correct fault condition
2. Turn pump switch OFF
3. Turn pump switch ON

# Engine

## Removal

1. Do **Fan Belt, Removal**; page 8.
2. Fig. 5. Disconnect all necessary wiring.
3. Fig. 6. Remove four engine mounting fasteners from underside of engine.

**NOTE:** All service to the engine must be performed by an authorized HONDA dealer.

Fig. 5

ti1477a

Fig. 6

ti1474a

## Installation

1. Fig. 6. Install four engine mounting fasteners on underside of engine and secure with locknuts (71). Torque to 200 in-lb (22.6 N•m).
2. Fig. 5. Connect all necessary wiring.
3. Do **Fan Belt, Installation**; page 8.

# Hydraulic Motor

## Removal

1.  Relieve pressure; page 4.
2. Remove screw (183), sensor bracket (184), sensor (47) and lock washer (185) from cylinder sleeve (36).
3. Fig. 7. Remove four cap screws (33), washers (128) and cylinder cap (34).
4. Remove o-ring (44) from cylinder sleeve (36).
5. Remove screw (141) and cover (106).
6. Disconnect magnetic sensor (47).
7. Check for set screw (186). If installed, remove.
8. Remove cylinder sleeve (36).
9. Remove hydraulic cylinder (37) and o-ring (44).

## Installation

1. Install o-ring (44) and hydraulic cylinder (37).
2. Install sensor bracket (184), sensor (47) and lock washer (185) to cylinder sleeve (36) with screw (183).
3. Install cylinder sleeve (36).
4. Tighten set screw (186).
5. Connect magnetic sensor (47).
6. Install cover (106) with screw (141).
7. Install cylinder sleeve (36) and o-ring (44).
8. Install cylinder cap (34) with four washers (128) and cap screws (33). Torque capscrews (33) in an alternating 1, 2, 3, 4 sequence at a torque of 55 +/- 5 ft-lb.

# Directional Valve and Hydraulic Motor Switches

## Directional Valve

### Removal

1.   Relieve pressure; page 4.
2. Fig. 7. Remove large hex nut (F) on top of valve (32).
3. Slide coil off valve.
4. Remove valve body.

### Installation

1. Install valve body by tightening large nut next to hydraulic manifold. Torque to 65 +/- 5 ft-lb.

2. Slide coil onto valve.

3. Install large hex nut (F) on top of valve (32).  
Torque nut to 10 +/- 1 ft-lb.

## Hydraulic Motor Switches

The magnetic motor switches sense the piston position and energize/de-energize the solenoid to change the hydraulic fluid flow.

1.   Relieve pressure; page 4.
2. Follow Hydraulic Motor Removal/Installation.

# Displacement Pump

See manual 309277 for pump repair instructions.

## Removal

1. Flush pump.

2.  Relieve pressure; page 4.

3. Fig. 8. Remove suction tube and paint hose (remove at swivel end).

Fig. 8

4. Fig. 9. Push retaining spring up; push out pin (21).

Fig. 9

5. Fig. 10. Loosen locknut with hammer. Unscrew pump.

Fig. 10

## Installation

### WARNING

If pin works loose, parts could break off and project through the air and result in serious injury or property damage. Make sure pin is properly installed.

### CAUTION

If the pump jam nut loosens during operation, the threads of the bearing housing and drive train will be damaged. Tighten jam nut as specified.

1. Fig. 11. Enter Diagnostic (Manual 309378). Short press DTS button to send hydraulic piston rod down. Screw in pump until holes in pump rod and hydraulic rod align.

Fig. 11

ti1478a

2. Fig. 9. Push pin (21) into hole. Push retaining spring into groove.

Fig. 12. Screw pump into hydraulic motor manifold until it is positioned as shown. Back off pump to align pump outlet with hose. Hand tighten jam nut, then tap 1/8 turn with hammer or torque to 150 ft-lb (203 N·m) (233640/641), 200 ft-lb (271 N·m).

Fig. 12

ti1478a

3. Fig. 13. Fill packing nut with Graco TSL.

Fig. 13

ti1478a

## **Parts Drawing - HydraMax 225 Sprayers**

 1 Apply anaerobic adhesive and torque to 190 - 210 in-lb

**TO PLACE AN ORDER**, contact your Graco distributor, or call this number to identify the distributor closest to you: **1-800-690-2894 Toll Free.**

# Graco Standard Warranty

Graco warrants all equipment listed in this manual which is manufactured by Graco and bearing its name to be free from defects in material and workmanship on the date of sale to the original purchaser for use. With the exception of any special extended or limited warranty published by Graco, Graco will, for a period of 12 months from the date of sale, repair or replace any part of the equipment determined by Graco to be defective. This warranty applies only when the equipment is installed, operated and maintained in accordance with Graco's written recommendations.

This warranty does not cover, and Graco shall not be liable for general wear and tear, or any malfunction, damage or wear caused by faulty installation, misapplication, abrasion, corrosion, inadequate or improper maintenance, negligence, accident, tampering, or substitution of non-Graco component parts. Nor shall Graco be liable for malfunction, damage or wear caused by the incompatibility of Graco equipment with structures, accessories, equipment or materials not supplied by Graco, or the improper design, manufacture, installation, operation or maintenance or structures, accessories, equipment or materials not supplied by Graco.

This warranty is conditioned upon the prepaid return of the equipment claimed to be defective to an authorized Graco distributor for verification of the claimed defect. If the claimed defect is verified, Graco will repair or replace free of charge any defective parts. The equipment will be returned to the original purchaser transportation prepaid. If inspection of the equipment does not disclose any defect in material or workmanship, repairs will be made at a reasonable charge, which charges may include the costs of parts, labor, and transportation.

Graco's sole obligation and buyer's sole remedy for any breach of warranty shall be as set forth above. The buyer agrees that no other remedy (including, but not limited to, incidental or consequential damages for lost profits, lost sales, injury to person or property, or any other incidental or consequential loss) shall be available. Any action for breach of warranty must be brought within 2 years of the date of sale.

**GRACO MAKES NO WARRANTY, AND DISCLAIMS ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE IN CONNECTION WITH ACCESSORIES, EQUIPMENT, MATERIALS OR COMPONENTS SOLD BUT NOT MANUFACTURED BY GRACO.** These items sold, but not manufactured by Graco (such as electric motors, gas engines, switches, hose, etc.), are subject to the warranty, if any, of their manufacturer. Graco will provide purchaser with reasonable assistance in making any claim for breach of these warranties.

In no event will Graco be liable for indirect, incidental, special or consequential damages resulting from Graco supplying equipment hereunder, or the furnishing, performance, or use of any products or other goods sold hereto, whether due to a breach of contract, breach of warranty, the negligence of Graco, or otherwise.

## **FOR GRACO CANADA CUSTOMERS**

The parties acknowledge that they have required that the present document, as well as all documents, notices and legal proceedings entered into, given or instituted pursuant hereto or relating directly or indirectly hereto, be drawn up in English. Les parties reconnaissent avoir convenu que la rédaction du présent document sera en Anglais, ainsi que tous documents, avis et procédures judiciaires exécutés, donnés ou intentés à la suite de ou en rapport, directement ou indirectement, avec les procédures concernées.

## **ADDITIONAL WARRANTY COVERAGE**

Graco does provide extended warranty and wear warranty for products described in the "Graco Contractor Equipment Warranty Program".

*All written and visual data contained in this document reflects the latest product information available at the time of publication.*

*Graco reserves the right to make changes at any time without notice.*
