Instructions/Parts List

SaniForce® High Sanitation Diaphragm Pumps
Models 1590 HS, 1590 3A, 3150 HS, 3150 3A

For use in sanitary applications. For professional use only.
See Models on page 3 for model numbers, descriptions, and compliance approvals.

120 psi (0.8 MPa, 8 bar) Maximum Fluid Working Pressure
120 psi (0.8 MPa, 8 bar) Maximum Air Input Pressure

Important Safety Instructions. Read all warnings and instructions in this manual. Save these instructions.
See page 2 for Table of Contents.

</tbody>
</table>

*ATEX T-code rating is dependent on the temperature of the fluid being pumped. Fluid temperature is limited by the materials of the pump interior wetted parts. See Model 1590 Technical Data, page 45, and Model 3150 Technical Data, page 48, for the maximum fluid operating temperature for your specific pump model.

**NOTE:** See pages 41-42 for parts.
Warnings

The following warnings are for the setup, use, grounding, maintenance, and repair of this equipment. The exclamation point symbol alerts you to a general warning and the hazard symbol refers to procedure-specific risk. When these symbols appear in the body of this manual, refer back to these warnings. Additional, product-specific warnings may be found throughout the body of this manual where applicable.

---

**WARNING**

**FIRE AND EXPLOSION HAZARD**

Flammable fumes, such as solvent and paint fumes, in work area can ignite or explode. To help prevent fire and explosion:

- Use equipment only in well ventilated area.
- Eliminate all ignition sources; such as pilot lights, cigarettes, portable electric lamps, and plastic drop cloths (potential static arc).
- Keep work area free of debris, including solvent, rags and gasoline.
- Do not plug or unplug power cords, or turn power or light switches on or off when flammable fumes are present.
- Ground all equipment in the work area. See Grounding instructions.
- Use only grounded hoses.
- Hold gun firmly to side of grounded pail when triggering into pail.
- If there is static sparking or you feel a shock, **stop operation immediately**. Do not use equipment until you identify and correct the problem.
- Keep a working fire extinguisher in the work area.

**PRESSURIZED EQUIPMENT HAZARD**

Fluid from the gun/dispense valve, leaks, or ruptured components can splash in the eyes or on skin and cause serious injury.

- Follow the Pressure Relief Procedure when you stop spraying and before cleaning, checking, or servicing equipment.
- Tighten all fluid connections before operating the equipment.
- Check hoses, tubes, and couplings daily. Replace worn or damaged parts immediately.
### EQUIPMENT MISUSE HAZARD

Misuse can cause death or serious injury.

- Do not operate the unit when fatigued or under the influence of drugs or alcohol.
- Do not exceed the maximum working pressure or temperature rating of the lowest rated system component. See **Technical Data** in all equipment manuals.
- Use fluids and solvents that are compatible with equipment wetted parts. See **Technical Data** in all equipment manuals. Read fluid and solvent manufacturer’s warnings. For complete information about your material, request MSDS from distributor or retailer.
- Do not leave the work area while equipment is energized or under pressure. Turn off all equipment and follow the **Pressure Relief Procedure** when equipment is not in use.
- Check equipment daily. Repair or replace worn or damaged parts immediately with genuine manufacturer’s replacement parts only.
- Do not alter or modify equipment.
- Use equipment only for its intended purpose. Call your distributor for information.
- Route hoses and cables away from traffic areas, sharp edges, moving parts, and hot surfaces.
- Do not kink or over bend hoses or use hoses to pull equipment.
- Keep children and animals away from work area.
- Comply with all applicable safety regulations.

### TOXIC FLUID OR FUMES HAZARD

Toxic fluids or fumes can cause serious injury or death if splashed in the eyes or on skin, inhaled, or swallowed.

- Read MSDSs to know the specific hazards of the fluids you are using.
- Route exhaust away from work area. If diaphragm ruptures, fluid may be exhausted into the air.
- Store hazardous fluid in approved containers, and dispose of it according to applicable guidelines.

### BURN HAZARD

Equipment surfaces and fluid that’s heated can become very hot during operation. To avoid severe burns:

- Do not touch hot fluid or equipment.

### PERSONAL PROTECTIVE EQUIPMENT

You must wear appropriate protective equipment when operating, servicing, or when in the operating area of the equipment to help protect you from serious injury, including eye injury, hearing loss, inhalation of toxic fumes, and burns. This equipment includes but is not limited to:

- Protective eyewear, and hearing protection.
- Respirators, protective clothing, and gloves as recommended by the fluid and solvent manufacturer.
Installation

General Information

- The typical installation shown in Fig. 3 is only a guide for selecting and installing system components. Contact your Graco distributor for assistance in planning a system to suit your needs.
- Always use genuine Graco parts and accessories.
- Reference numbers and letters in parentheses refer to the callouts in the figures and the parts lists on pages 32 - 42.

**Leak Detection System**

**NOTE:** A leak detection system is included with all approved pumps. See manual 311200 included with leak detector for leak detector installation instructions.

**Tighten Clamps Before First Use**

After you unpack the pump, and before you use it for the first time, check all clamps, and tighten as necessary.

**Stand**

**NOTE:** See pages 38 and 39 for parts.

1. Place the stand assembly on a level surface.
2. Mount the pump securely to the brackets using bolts provided.

**NOTE:** To drain or service the pump, pull on the quick-release pins (638e, one on each side) to allow the pump to rotate while still securely mounted to the bracket.

**Grounding**

**NOTE:** Ground the pump and all other equipment used or located in the pumping area. Grounding reduces the risk of static and electric shock by providing an escape wire for the electrical current due to static build up or in the event of a short circuit. Check your local electrical code for detailed grounding instructions for your area and type of equipment.

- Pump: Connect a ground wire and clamp as shown in Fig. 2. Loosen the grounding screw (W). Insert one end of a 12 ga (1.5 mm²) minimum ground wire (X) behind the grounding screw and tighten the screw securely. Connect the clamp end of the ground wire to a true earth ground. To order a ground wire and clamp, order part number 222011.

Keep clear of moving parts.
Installation

Fig. 2: Ground Wire Connection

- Air and fluid hoses: Use only grounded hoses with a maximum of 500 ft (150 m) combined hose length to ensure grounding continuity.
- Air compressor: Follow the manufacturer’s recommendations.
- Fluid supply container: Follow the local code.

Mountings

NOTE: The pump exhaust air may contain contaminants. Ventilate to a remote area if the contaminants could affect your fluid supply. See Air Exhaust Ventilation on page 12.

- Be sure the mounting surface can support the weight of the pump, hoses, and accessories, as well as the stress caused during operation.
- For ease of operation and service, mount the pump so the air valve cover, air inlet, and fluid inlet and outlet ports are easily accessible.

Air Line

A bleed-type master air valve (B) is required in the system to relieve air trapped between this valve and the pump. Trapped air can cause the pump to cycle unexpectedly, which could result in serious injury including splashing in the eyes or on the skin, injury from moving parts, or contamination from hazardous fluids. See Fig. 3.

1. Install the air line accessories as shown in Fig. 3. Mount these accessories on the wall or on a bracket. Be sure the air line supplying the accessories is grounded.
   a. Install an air regulator (C) and gauge to control the fluid pressure. The fluid outlet pressure will be the same as the setting of the air regulator.
   b. Locate one bleed-type master air valve (B) close to the pump and use it to relieve trapped air. Locate the other master air valve (E) upstream from all air line accessories and use it to isolate them during cleaning and repair.
   c. The air line filter (F) removes harmful dirt and moisture from the compressed air supply.

2. Install a grounded, flexible air hose (A) between the accessories and the 1/2 npt(f) pump air inlet (M). Use a minimum 3/8 in. (9.5 mm) ID air hose. Screw an air line quick disconnect coupler (D) onto the end of the air hose (A), and screw the mating fitting into the pump air inlet snugly.

Fluid Suction Line

1. Use flexible, grounded fluid hoses (G) where possible.

2. For best sealing results, use a standard tri-clamp or DIN style sanitary gasket of a flexible material such as EPDM, Buna-N, fluoroelastomer, or silicon.

NOTE: Compliance with 3A sanitary standards requires DIN connections to use certain gaskets. See CCE Coordination Bulletin Number 2011-3. Two such gaskets are the Siersema Komponent System (S.K.S.), the Netherlands, and the ASEPTO-STAR k-flex gasket from Kieselmann GmbH, Germany.

3. If the fluid inlet pressure to the pump is more than 25% of the outlet working pressure, the ball check valves will not close fast enough, resulting in inefficient pump operation. Excessive inlet fluid pressure also will shorten diaphragm life. Approximately 3-5 psi (0.02-0.03 MPA, 0.21-0.34 bar) should be adequate for most materials.

4. See the Technical Data on pages 45 and 48 for maximum suction lift (wet and dry). For best results, always install the pump as close as possible to the material source.
Fluid Outlet Line

1. Use flexible, grounded fluid hoses (L) where possible.
2. For best sealing results, use a standard tri-clamp or DIN style sanitary gasket of a flexible material such as EPDM, Buna-N, fluoroelastomer, or silicon.
3. Install a fluid drain valve (J) near the fluid outlet. See Fig. 3.
4. Install a shutoff valve (K) in the fluid outlet line.

Typical Installation

Key:
A  Air supply line
B  Bleed-type master air valve
   (required for pump)
C  Air regulator
D  Air line quick disconnect
E  Master air valve (for accessories)
F  Air line filter
G  Flexible fluid suction line
J  Fluid drain valve
K  Fluid shutoff valve
L  Flexible fluid line
M  1/2 npt (f) air inlet
X  Ground wire (required; see page 8 for installation instructions)

Fig. 3: Typical Floor-Mount Installation
Changing the Orientation of the Fluid Inlet and Outlet Ports

The pump is shipped with the ports facing the same direction. To reorient the ports into any position:

1. Remove the clamps (130) holding the inlet and/or outlet tee to the elbows.
2. Rotate the manifold tee (339) and reattach. Install the clamps (130) and tighten handtight.

Air Exhaust Ventilation

Be sure the system is properly ventilated for your type of installation. You must vent the exhaust to a safe place, away from people, animals, food handling areas, and all sources of ignition when pumping flammable or hazardous fluids.

Diaphragm failure can cause the fluid being pumped to exhaust with the air. Place an appropriate container at the end of the air exhaust line to catch the fluid. See Fig. 5.

The air exhaust port is 3/4 npt(f). Do not restrict the air exhaust port. Excessive exhaust restriction can cause erratic pump operation.

To provide a remote exhaust:

1. Remove the muffler (P) from the pump air exhaust port. See Fig. 5.
2. Install a grounded air exhaust hose (T) and connect the muffler (P) to the other end of the hose. The minimum size for the air exhaust hose is 3/4 in. (19 mm) ID. If a hose longer than 15 ft (4.57 m) is required, use a larger diameter hose. Avoid sharp bends or kinks in the hose.
3. Place a grounded container (U) at the end of the air exhaust line to catch fluid in case of a diaphragm rupture. See Fig. 5.

Fig. 4: Orientation of Fluid Ports (tri-clamp model shown)
**Key:**
A  Air supply line
B  Bleed-type master air valve (required for pump)
C  Air regulator
D  Air line quick disconnect
E  Master air valve (for accessories)
F  Air line filter
P  Muffler
T  Grounded air exhaust hose
U  Container for remote air exhaust

**Fig. 5: Venting Exhaust Air**
Operation

Pressure Relief Procedure

1. Shut off the air to the pump.
2. Open any available outbound fluid valve to relieve fluid pressure from the pump.
3. If fluid is still in the outbound fluid lines, isolate this fluid as follows:
   a. Close the outbound fluid valves.
   b. Slowly remove the fluid connections from the pump, and have a container ready to catch any fluid that runs out.

NOTE: If fluid inlet pressure to the pump is more than 25% of the outlet working pressure, the ball check valves will not close fast enough, resulting in inefficient pump operation.

Sanitizing the Pump Before First Use

NOTE: The pump was built and tested using a food grade lubricant.

It is the user's responsibility to properly sanitize the pump before first use. It is up to the user whether this will include disassembling and cleaning individual parts or simply flushing pump with a sanitizing solution. As necessary, follow the steps under Starting and Adjusting the Pump below, under Flushing on page 14, or under Disassembly in the Service section on pages 21, 23, and 26.

Starting and Adjusting the Pump

1. Be sure the pump is properly grounded. See Grounding, page 8.
2. Check connections to be sure they are tight. Tighten fluid inlet and outlet connections securely.
3. Place the suction tube (if used) in fluid to be pumped.

Pump Shutdown

At the end of the work shift, relieve pressure.
Maintenance

Lubrication
The air valve is designed to operate unlubricated. If lubrication is desired, every 500 hours of operation (or monthly) remove the hose from the pump air inlet and add two drops of machine oil to the air inlet.

NOTICE
Do not over-lubricate the pump. Oil is exhausted through the muffler and could contaminate your fluid supply or other equipment. Excessive lubrication can also cause the pump to malfunction.

Flushing
Insert suction tube into cleaning solution. Open air regulator to supply low pressure air to the pump. Run the pump long enough to thoroughly clean the pump and hoses. Close the air regulator. Remove the suction tube from the cleaning solution and drain pump. Place suction tube in the fluid to be pumped.

Flush the pump often enough to prevent the fluid you are pumping from drying or freezing in the pump and damaging it. Flushing schedule will be based on what the pump is being used for. Use a compatible cleaning solution and always cycle the pump during the entire flushing process.

Always flush the pump and relieve the pressure before storing it for any length of time.

Routine Cleaning of Product Contact Section of Pump
NOTE: The pump and the system should be cleaned in accordance with your state sanitary standard codes and local regulations.

1. Flush the system. See Flushing above.
2. Follow the Pressure Relief Procedure, page 13.
4. Using a brush or other C.O.P. methods, wash all product contact pump parts with an alkaline detergent at the manufacturer’s recommended temperature and concentration.
5. Rinse these parts again with water and allow parts to completely dry.
6. Inspect the parts and re-clean any soiled parts.
7. Immerse all product contact parts in an approved sanitizer before assembly. Leave the parts in the sanitizer, taking them out only one by one as needed for assembly. See Check Valve Repair, page 21, and Standard Diaphragm Repair, page 23, or 3A/Overmolded Diaphragm Repair, page 26.
8. Lubricate the clamps, clamping surfaces, and gaskets with waterproof sanitary lubricant.
9. Circulate the sanitizing solution through the pump and the system prior to use. Cycle the pump as the sanitizing solution is circulated.

Tightening Connections
Before each use, check all hoses for wear or damage, and replace as necessary. Check to be sure all connections are tight and leak-free.
Preventive Maintenance Schedule

Establish a preventive maintenance schedule based on the pump's service history. This is especially important for prevention of spills or leakage due to diaphragm failure.

The following is a list of recommended maintenance procedures and frequencies. Maintenance must be performed by trained personnel per the established schedule.

<table>

Troubleshooting

- Follow the **Pressure Relief Procedure**, page 13, before checking or servicing the equipment.
- Check all possible problems and causes before disassembling the pump.

<table>

Service

Repairing the Air Valve

Tool Required
- Torque wrench
- Torx (T20) screwdriver or 7 mm (9/32 in.) socket wrench
- Needle-nose pliers
- O-ring pick
- Lithium base grease

Air Valve Repair Kit 255122 is available. Refer to Parts on page 40. Parts included in the kit are marked with ◆ symbol. Use all the parts in the kit for the best results.

Disassembly

1. Follow the Pressure Relief Procedure, page 13.

2. With a Torx (T20) screwdriver or 7 mm (9/32 in.) socket wrench, remove the six screws (103), air valve cover (102), and gasket (104). See Fig. 6.

3. Move the valve carriage (105) to the center position and pull it out of the cavity. Using a needle-nose pliers, pull the pilot block (116) straight up and out of the cavity. See Fig. 7.

4. Pull the two actuator pistons (111). Remove the u-cups (110) from the pistons. Pull the pilot pins (114). Remove the o-rings (115) from the pilot pins. See Fig. 8.
5. Inspect the valve plate (108) in place. If damaged, use a Torx (T20) screwdriver or 7 mm (9/32 in.) socket wrench to remove the three screws (103). Remove the valve plate (108). See Fig. 9.

6. Inspect the bearings (112, 117) in place. See Parts on page 40. The bearings are tapered and, if damaged, must be removed from the outside. This requires disassembly of the fluid section. See page 28.

7. Clean all parts and inspect for wear or damage. Replace as needed. Reassemble, page 19.

Reassembly

1. If you replaced the bearings (112, 117), reinstall as explained on page 28. Reassemble the fluid section.

2. Install the valve plate (108) in the cavity, seal down. Install the three screws (103), using a Torx (T20) screwdriver or 7 mm (9/32 in.) socket wrench. Tighten until the screws bottom out on the housing. See Fig. 9.

3. Install an o-ring (115) on each pilot pin (114). Grease the pins and o-rings. Insert the pins into the bearings, narrow end first. See Fig. 10.

4. Install u-cups (110) on each actuator piston (111), so the lips of the packings face the narrow end of the pistons. See Fig. 10.

5. Lubricate the u-cups (110) and actuator pistons (111). Insert the actuator pistons in the bearings, wide end first. Leave the narrow end of the pistons exposed. See Fig. 10.
6. Grease the lower face of the pilot block (116) and install so its tabs snap into the grooves on the ends of the pilot pins (114). See Fig. 11.

7. Grease the lower face of the valve carriage (105). See Fig. 11.

8. Install the valve carriage (105) so its tabs slip into the grooves on the narrow end of the actuator pistons (111). See Fig. 11.

9. Align the valve gasket (104) and cover (102) with the six holes in the center housing (101). Secure with six screws (103), using a Torx (T20) screwdriver or 7 mm (9/32 in.) socket wrench. Torque to 50-60 in-lb (5.7-6.8 N•m). See Fig. 12.
Check Valve Repair

Disassembly

Reference numbers with an asterisk (*) are replacement parts. For a complete list of replacement parts see Parts, page 32 and following.

1. Follow the Pressure Relief Procedure, page 13. Disconnect all hoses.

2. Pull the quick release pins and tilt the pump to drain.

3. From the outlet manifold, remove both upper clamps (132a).

4. Remove outlet manifold leaving elbows (128), gaskets (129), clamps (130), and tee (339) assembled.

5. For 3A Ball Check pumps: remove ball gasket (240). Remove middle clamp (132c) and ball stop housing (2XA). Remove middle gasket (240) and ball (541). Remove lower clamp (132b), seat (2XB), and gasket (240). Clean all parts and inspect for wear or damage. Replace parts as needed.

FIG. 13: 3A Ball Check Assembly
For Sanitary Ball Check pumps: remove ball gasket (242) and ball (541). Remove lower clamp (132b), seat (233), and gasket (240). Clean all parts and inspect for wear or damage. Replace parts as needed.

For Flapper Check pumps: remove gasket (240). Remove middle clamp (132c) and housing (252). Remove middle gasket (240), and flapper valve (251). Remove lower clamp (132b), lower flapper housing (248), and gasket (240). Clean all parts and inspect for wear or damage. Replace parts as needed.
6. Disassemble the outlet manifold. Remove clamps (130), tee (339), gasket (129), and elbow (128). Clean all parts and inspect for wear or damage. Replace parts as needed.

7. Repeat for inlet manifold.

Reassembly

NOTE: Apply waterproof, sanitary lubricant to the clamps and clamping surfaces. Apply food grade anti-seize lubricant to clamp threads.

1. Reassemble inlet and outlet fluid manifolds in reverse order. See step 6. Tighten clamps hand-tight.

2. Reassemble ball or flapper check assembly in reverse order. See step 5. Tighten clamps hand-tight.

NOTE: For flapper check, make sure flapper check (251) is placed properly in housing (248) groove. Ensure that the flapper check moves freely.

Standard Diaphragm Repair

NOTE: See page 26 for overmolded diaphragms, including all 3A diaphragms.

Tools Required

- Torque wrench
- 5/8 in. wrench
- 19 mm open end wrench
- O-ring pick
- Lithium-base grease
- Spanner wrench

Disassembly

1. Follow the Pressure Relief Procedure, page 13.

2. Remove the manifolds and disassemble the ball check valves as explained on page 21.

3. Hold fluid covers in place and remove the clamps (135). Pull the fluid covers (234) off the pump.
4. With both fluid covers removed, using two 5/8 in. wrenches hold the wrench flats (Y) on the plates of each diaphragm assembly and loosen. One diaphragm assembly will come free and the other will remain attached to the shaft.

5. Disassemble the free diaphragm assembly.

6. Remove plate (444) with bolt (143) installed, diaphragm (446), backer (447) if present, and plate (445).

7. Pull the other diaphragm assembly and the diaphragm shaft (121) out of the center housing (101). Hold the shaft flats with a 19 mm open end wrench, and remove the diaphragm assembly from the shaft. Disassemble the remaining diaphragm assembly.

8. Inspect the diaphragm shaft (121) for wear or scratches. If it is damaged, inspect the bearings (117) in place. If the bearings are damaged, refer to Bearing and Air Gasket Removal on page 28.

9. Reach into the center housing (101) with an o-ring pick and hook the u-cups (110), then pull them out of the housing. This can be done with the bearings (117) in place. See Fig. 24, page 28.

10. Clean all parts and inspect for wear or damage. Replace parts as needed.
Reassembly

1. Install the shaft u-cups (110) so the lips face **out** of the housing (101). Lubricate the u-cups. See **Reassembly of Bearing**, page 28.

2. Assemble diaphragm (446), backer (447) if present, and plate (445) onto plate (444) with screw (143). Rounded side of plate (445) should face diaphragm. Make sure the side marked AIR SIDE faces the center housing.

**NOTE:** Thread locker must be applied to screw (143) as shown in **Fig. 19** for all diaphragm assemblies.

3. Screw assembled diaphragm assembly into shaft (121) and hand tighten.

4. Grease the length of the diaphragm shaft (121), and slide it through the housing (101).

5. Assemble the other diaphragm assembly to the shaft as explained in step 2.

6. Using a 5/8 in. wrench hold the wrench flats of one diaphragm assembly and torque the other diaphragm to 60-70 ft-lb (81-94 N•m).

**NOTE:** Apply waterproof, sanitary lubricant to the clamps and clamping surfaces. Apply food grade anti-seize lubricant to clamp threads.

7. Align the fluid covers (234) and the center housing. Secure the covers with the clamps (135) and hand tighten.

8. Reassemble the ball check valves and manifolds as explained on page 23.

---

**Fig. 19**

![Diagram](TI8774a)

⚠️ Apply a high-strength thread locker to attach the screw to the diaphragm plate, if needed.

⚠️ Apply a medium-strength thread locker to the shaft side of the screw.

**Fig. 20**

![Diagram](TI8771a)
3A/Overmolded Diaphragm Repair

NOTE: If your pump uses standard diaphragms, see page 23.

Tools Required
- Torque wrench
- 19 mm open end wrench
- O-ring pick
- Lithium-base grease

Disassembly

1. Follow the Pressure Relief Procedure, page 13.
2. Remove the manifolds and disassemble the ball check valves as explained on page 21.
3. Remove the clamps (135) holding the fluid covers (234) to the air covers (120). Pull the fluid covers (234) off the pump. See Fig. 21.
4. Once the fluid covers are removed, the diaphragm on the side of the pump which was last pressurized with air will be separated from the center section/air cover. This allows you to grip the diaphragms.
5. Diaphragms are assembled handtight. To loosen, grip both diaphragms securely around the outer edge and rotate counterclockwise. One diaphragm assembly will come free and the other will remain attached to the shaft. Remove the freed diaphragm (446) and air side plate (445).
6. Pull the opposite diaphragm assembly and shaft (121) out of the center housing (101). Hold the shaft flats with a 19 mm open end wrench and remove the diaphragm and air side plate from the shaft.
7. Inspect the diaphragm shaft (121) for wear or scratches. If it is damaged, inspect the bearings (117) in place. If the bearings are damaged, refer to page 28.
8. Reach into the center housing (101) with an o-ring pick and hook the u-cup packings (110), then pull them out of the housing. This can be done with the bearings (117) in place.
9. Clean all parts and inspect for wear or damage. Replace parts as needed.

Fig. 21
Reassembly

1. Install the shaft u-cup packings (110°) so the lips face out of the housing (101). Lubricate the packings. See FIG. 24, page 28.

2. Apply high-strength (red) Loctite® or equivalent to attach the bolt (446a) to the diaphragm (446), if needed. Assemble the air side plate (445) onto the diaphragm (446). The wide, radiused side of the plate must face the diaphragm. Apply medium-strength (blue) Loctite® or equivalent to the threads of the diaphragm assembly. Screw the assembly into the shaft (121) hand tight.

3. Grease the length and ends of the diaphragm shaft (121). Insert the shaft/diaphragm assembly into one side of the pump.

4. Assemble the other diaphragm assembly to the shaft as explained in step 2. This diaphragm will be lifted off the air cover at this point.

5. Supply the pump with low pressure air (less than 7 psi [0.05 MPa, 0.5 bar]). The diaphragm will very slowly pull onto the air cover (120). Find the pressure that keeps the diaphragm close enough to clamp, but does not let it contact the pilot pin.

6. Assemble the fluid cover (234) and clamp (135) so the cover is aligned to the center housing. Tilt pump for easier assembly. Securely tighten the clamp.

NOTE: If the diaphragm contacts the pilot pin and is forced away from the air cover, try Step 5 again. If necessary, return to Step 3.

7. Reassemble the ball check valves and manifolds as explained on page 21.

NOTE: To reduce the risk of serious injury, including amputation, do not put your fingers or hand between the air cover and the diaphragm.

NOTE: Apply waterproof, sanitary lubricant to the clamps and clamping surfaces. Apply food grade anti-seize lubricant to clamp threads.

To reduce the risk of serious injury, including amputation, do not put your fingers or hand between the air cover and the diaphragm.

NOTE: Apply waterproof, sanitary lubricant to the clamps and clamping surfaces. Apply food grade anti-seize lubricant to clamp threads.

Apply a high-strength thread locker to attach the screw to the diaphragm, if needed.

Apply a medium-strength thread locker to the shaft side of the screw.
Bearing and Air Gasket Removal

Tools Required

- Torque wrench
- 10 mm socket wrench
- Bearing puller
- O-ring pick
- Press, or block and mallet

Disassembly

**NOTE:** Do not remove undamaged bearings.

1. Follow the **Pressure Relief Procedure**, page 13.
2. Remove the manifolds and disassemble the ball check valves as explained on page 21.
3. Remove the fluid covers and diaphragm assemblies as explained on page 23 (standard) or page 26 (3A/O vermolded).

**NOTE:** If you are removing only the diaphragm shaft bearing (117), skip step 4.

4. Disassemble the air valve as explained on page 18.
5. Using a 10 mm socket wrench, remove the screws (122) holding the air covers (120) to the center housing (101).

6. Remove the air cover gaskets (119). Always replace the gaskets with new ones.
7. Use a bearing puller to remove the diaphragm shaft bearings (117), air valve bearings (112) or pilot pin bearings (113). Do not remove undamaged bearings.

8. If you removed the diaphragm shaft bearings (117) reach into the center housing (101) with an o-ring pick and hook the u-cups (110), then pull them out of the housing. Inspect the u-cups. See Fig. 24. Replace parts as needed.

Reassembly

**NOTE:** Adhesive must be applied to the outside surface of the bearing (112) and the inside surface of bore (Z) prior to assembly.

1. Install the shaft u-cups (110) so the lips face out of the housing.
2. Insert new bearings (112, 113, and 117) into the center housing (101), **tapered end first**. Using a press or a block and rubber mallet, press-fit the bearing so it is flush with the surface of the center housing.

3. Reassemble the air valve as explained on page 18.
4. Align the new air cover gasket (119) so the pilot pin (114) protruding from the center housing (101) fits through the proper hole in the gasket.

5. Align the air cover (120) so the pilot pin (114) fits in the middle hole (M) of the three small holes near the center of the cover.

6. Apply medium-strength (blue) Loctite® or equivalent to the threads of the screws (122). Install the screws (122), handtight. Using a 10 mm socket wrench, torque the screws oppositely and evenly to 130-150 in-lb (15-17 N•m). Install the diaphragm assemblies and fluid covers as explained on page 23.

7. Reassemble the ball check valves and manifolds as explained on page 21.
### SaniForce 3150 Stainless Steel Sanitary Pumps

Your Model No. is marked on the pump’s serial plate. To determine the Model No. of your pump from the following matrix, select the six digits which describe your pump, working from left to right. The first digit is always S, designating Graco Sanitary diaphragm pumps. The remaining five digits define the pump configuration, size, and materials of construction. For example, a sanitary ball check pump with a three inch inlet and outlet, Santoprene balls and diaphragms, a pump stand, and no leak detector is model **SB 3661**. To order replacement parts, refer to the part lists on pages 32 - 41. The digits in the matrix do not correspond to the reference numbers in the parts drawing and lists.

Apply a high-strength thread locker to attach the screw to the diaphragm plate (sanitary pump) or to the diaphragm (3A pump), if needed.

Apply a medium strength thread locker to shaft side of screw threads.

Apply waterproof, sanitary lubricant to the clamps and clamping surfaces. Apply food grade anti-seize lubricant to clamp threads.

Parts not included on BES/ram models (Part Numbers 24xxxx).

* Indicates replacement parts.
† Indicates a recommended spare part.
Apply medium strength adhesive to outside surface of piston bearing and inside surface of center housing bore.

Apply a medium strength thread locker to screw threads and torque to 130-150 in-lbs (14.6-16.9 N•m).

Torque to 50-60 in-lb (5.7-6.8 N•m).
Apply a high-strength thread locker to attach the screw to the diaphragm plate (sanitary pump) or to the diaphragm (3A pump), if needed.

Apply a medium strength thread locker to shaft side of screw threads.

Apply waterproof, sanitary lubricant to the clamps and clamping surfaces. Apply food grade anti-seize lubricant to clamp threads.

Parts not included on BES/ram models (Part Numbers 24xxxx).

Accessories

15D990 Leak Detector
Sensor and control package that monitors the diaphragm condition. In case of diaphragm failure, the control will provide an audible alarm and relay contacts for remote alarms or solenoids. See Leak Detector manual 311200.

NOTE: To be approved, a leak detection system must be used on the pump. Any pump with a leak detector installed is NOT Atex approved.

NOTE: To replace a sensor, order Part No. 24B290 Leak Detector Sensor Replacement Kit. The kit includes one sensor.

3150 Conversion Kits

15H461 3A Approved Ball Check Conversion Kit
Converts flapper check valve to 3A ball check valve. Includes four seats and four ball stops. Balls need to be ordered separately.

Model 1590 Dimensional Drawing

NOTE: Dimensions are identical for tri-clamp and DIN models.
Model 1590 Technical Data

Maximum fluid working pressure ................. 120 psi (0.8 MPa, 8 bar)
Air pressure operating range ...................... 20-120 psi (0.14-0.8 MPa, 1.4-8 bar)
Maximum air consumption .......................... 125 scfm
Air consumption at 70 psi air inlet pressure/60 gpm .... 50 scfm (see chart)
Maximum free-flow delivery ...................... 100 gpm (378.5 l/min)
Maximum pump speed .............................. 200 cpm
* Gallons (Liters) per cycle ........................ 0.5 (1.96)
Maximum suction lift (varies widely based on ball/seat selection and wear, operating speed, material properties, and other variables) ........................ 28 ft (8.5 m) wet, 15 ft (4.57 m) dry
Maximum size pumpable solids .................... 5/8 in. (15.9 mm)

** Maximum Noise Level at 100 psi, full flow ........ 90 dBA
** Sound Power Level ............................. 103 dBA
** Noise Level at 70 psi and 50 cpm ............... 85 dBA

Maximum fluid operating temperature is based on the following maximum diaphragm, ball, and seat temperature ratings.

- PTFE balls; PTFE/EPDM 2-piece diaphragm .... 220°F (104.4°C)
- PTFE/EPDM Overmolded (HD) diaphragm .... 180°F (82.2°C)
- Santoprene balls or diaphragm .................. 180°F (82.2°C)
- 3A Approved EPDM Overmolded diaphragm .... 275°F (135°C)

Air inlet size ...................................... 0.5 in. npt(f)

Wetted parts
***All fluid contact materials are FDA-compliant and meet the United States Code of Federal Regulations (CFR) Title 21, Section 177.

All fluid contact materials are FDA-compliant.
Wetted materials on all models .................... 316 SST, 3A Approved EPDM, PTFE,
Wetted material depending on model ............ Santoprene®, 3A Approved EPDM, PTFE

CAUTION:
Santoprene® may be used only with non-fatty, non-oily foods or alcohols up to 15%.

Non-wetted external parts .......................... 300 series stainless steel, polyester (labels), LDPE foam (gasket)

Weight .............................................. 97 lb (44 kg)

Santoprene® is a registered trademark of the Monsanto Co.
Loctite® is a registered trademark of the Loctite Corporation.

* Displacement per cycle may vary based on suction condition, discharge head, air pressure, and fluid type.

** Noise levels measured with the pump mounted on the stand. Sound power measured per ISO Standard 9614-1.

*** The pump user must verify that the construction materials meet their specific application requirements.
Model 1590 Performance Chart

Test Conditions: Pump tested in water with inlet submerged

To find Fluid Outlet Pressure

(psi/MPa/bar) at a specific fluid flow (gpm/lpm) and operating air pressure (psi/MPa/bar):

1. Locate fluid flow rate along bottom of chart.
2. Follow vertical line up to intersection with selected fluid outlet pressure curve.
3. Follow left to scale to read fluid outlet pressure.

To find Pump Air Pressure

(scfm or m³/min) at a specific fluid flow (gpm/lpm) and operating air pressure (psi/MPa/bar):

1. Locate fluid flow rate along bottom of chart.
2. Read vertical line up to intersection with selected air consumption curve.
3. Follow left to scale to read fluid outlet pressure.

Model 3150 Performance Chart

Test Conditions: Pump tested in water with inlet submerged

To find Fluid Outlet Pressure

(ksi/MPa/bar) at a specific fluid flow (gpm/lpm) and operating air pressure (ksi/MPa/bar):

1. Locate fluid flow rate along bottom of chart.
2. Follow vertical line up to intersection with selected fluid outlet pressure curve.
3. Follow left to scale to read fluid outlet pressure.

To find Pump Air Pressure

(scfd or m^3/min) at a specific fluid flow (gpm/lpm) and operating air pressure (ksi/MPa/bar):

1. Locate fluid flow rate along bottom of chart.
2. Read vertical line up to intersection with selected air consumption curve.
3. Follow left to scale to read fluid outlet pressure.
Graco Warranties

Graco Standard Pump Warranty

Graco warrants all equipment manufactured by Graco and bearing its name to be free from defects in material and workmanship on the date of sale to the original purchaser for use. With the exception of any special, extended, or limited warranty published by Graco, Graco will, for a period of twelve months from the date of sale, repair or replace any part of the equipment determined by Graco to be defective. This warranty applies only when the equipment is installed, operated and maintained in accordance with Graco’s written recommendations.

This warranty does not cover, and Graco shall not be liable for general wear and tear, or any malfunction, damage or wear caused by faulty installation, misapplication, abrasion, corrosion, inadequate or improper maintenance, negligence, accident, tampering, or substitution of non-Graco component parts. Nor shall Graco be liable for malfunction, damage or wear caused by the incompatibility of Graco equipment with structures, accessories, equipment or materials not supplied by Graco, or the improper design, manufacture, installation, operation or maintenance of structures, accessories, equipment or materials not supplied by Graco.

This warranty is conditioned upon the prepaid return of the equipment claimed to be defective to an authorized Graco distributor for verification of the claimed defect. If the claimed defect is verified, Graco will repair or replace free of charge any defective parts. The equipment will be returned to the original purchaser transportation prepaid. If inspection of the equipment does not disclose any defect in material or workmanship, repairs will be made at a reasonable charge, which charges may include the costs of parts, labor, and transportation.

THIS WARRANTY IS EXCLUSIVE, AND IS IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.

Graco’s sole obligation and the buyer’s sole remedy for any breach of warranty shall be as set forth above. The buyer agrees that no other remedy (including, but not limited to, incidental or consequential damages for lost profits, lost sales, injury to person or property, or any other incidental or consequential loss) shall be available. Any action for breach of warranty must be brought within two years of the date of sale.

Graco makes no warranty, and disclaims all implied warranties of merchantability and fitness for a particular purpose in connection with accessories, equipment, materials or components sold but not manufactured by Graco. These items sold, but not manufactured by Graco (such as electric motors, switches, hose, etc.), are subject to the warranty, if any, of their manufacturer. Graco will provide purchaser with reasonable assistance in making any claim for breach of these warranties.

In no event will Graco be liable for indirect, incidental, special or consequential damages resulting from Graco supplying equipment hereunder, or the furnishing, performance, or use of any products or other goods sold hereto, whether due to a breach of contract, breach of warranty, the negligence of Graco, or otherwise.

FOR GRACO CANADA CUSTOMERS

The parties acknowledge that they have required that the present document, as well as all documents, notices and legal proceedings entered into, given or instituted pursuant hereto or relating directly or indirectly hereto, be drawn up in English. Les parties reconnaissent avoir convenu que la rédaction du présent document sera en Anglais, ainsi que tous documents, avis et procédures judiciaires exécutés, donnés ou intentés, à la suite de ou en rapport, directement ou indirectement, avec les procédures concernées.
