Installation Instructions

1. Locate hole or drill and ream a 5/8" hole in frame rail.
2. Mount module through hole in frame with lock washer against hex on stud. **Do not overtighten.**
3. Tie wrap each set of tubing bundles together and run down to axle brake cans following the air lines for each respective side.
4. Anchor the first tie at frame fitting and the last tie of this bundle at the fitting on brake can. This will prevent strain on air hose.
5. Cut main line and insert the "tee" supplied in the kit or install another connector into one of the three inlets in the module. This module can be in line with others or at the end of line depending on the application and location of the axle.
