XM Mix Manifold Kits

For mixing two component reactive materials with XM plural-component sprayers. Not for use on mechanical proportioners. Approved for use in explosive atmospheres.

For professional use only.

Part No. 255684
Mix Manifold

Part No. 256980
Remote Mix Manifold Conversion Kit with protective guard

7250 psi (50 MPa, 500 bar) Maximum Working Pressure
160°F (71°C) Maximum Fluid Temperature

Warnings

The following warnings are for the setup, use, grounding, maintenance, and repair of this equipment. The exclamation point symbol alerts you to a general warning and the hazard symbol refers to procedure-specific risk. Refer back to these warnings. Additional, product-specific warnings may be found throughout the body of this manual where applicable.

WARNING

FIRE AND EXPLOSION HAZARD
Flammable fumes, such as solvent and paint fumes, in work area can ignite or explode. To help prevent fire and explosion:

- Use equipment only in well ventilated area.
- When flammable liquid is sprayed or used for flushing or cleaning, keep sprayer at least 20 feet (6 meters) away from explosive vapors.
- Eliminate all ignition sources; such as pilot lights, cigarettes, portable electric lamps, and plastic drop cloths (potential static arc).
- Keep work area free of debris, including solvent, rags and gasoline.
- Do not plug or unplug power cords, or turn power or light switches on or off when flammable fumes are present.
- Ground all equipment in the work area. See Grounding instructions.
- Use only grounded hoses.
- Hold gun firmly to side of grounded pail when triggering into pail.
- If there is static sparking or you feel a shock, stop operation immediately. Do not use equipment until you identify and correct the problem.
- Keep a working fire extinguisher in the work area.

EQUIPMENT MISUSE HAZARD
Misuse can cause death or serious injury.

- Do not operate the unit when fatigued or under the influence of drugs or alcohol.
- Do not exceed the maximum working pressure or temperature rating of the lowest rated system component. See Technical Data in all equipment manuals.
- Use fluids and solvents that are compatible with equipment wetted parts. See Technical Data in all equipment manuals. Read fluid and solvent manufacturer's warnings. For complete information about your material, request MSDS forms from distributor or retailer.
- Check equipment daily. Repair or replace worn or damaged parts immediately with genuine manufacturer's replacement parts only.
- Do not alter or modify equipment.
- Use equipment only for its intended purpose. Call your distributor for information.
- Route hoses and cables away from traffic areas, sharp edges, moving parts, and hot surfaces.
- Do not kink or over bend hoses or use hoses to pull equipment.
- Keep children and animals away from work area.
- Comply with all applicable safety regulations.

SKIN INJECTION HAZARD
High-pressure fluid from gun, hose leaks, or ruptured components will pierce skin. This may look like just a cut, but it is a serious injury that can result in amputation. Get immediate surgical treatment.

- Do not point gun at anyone or at any part of the body.
- Do not put your hand over the spray tip.
- Do not stop or deflect leaks with your hand, body, glove, or rag.
- Do not spray without tip guard and trigger guard installed.
- Engage trigger lock when not spraying.
- Follow Pressure Relief Procedure in this manual, when you stop spraying and before cleaning, checking, or servicing equipment.
**WARNING**

**PRESSURIZED EQUIPMENT HAZARD**
Fluid from the gun/dispense valve, leaks, or ruptured components can splash in the eyes or on skin and cause serious injury.
- Follow **Pressure Relief Procedure** in this manual, when you stop spraying and before cleaning, checking, or servicing equipment.
- Tighten all fluid connections before operating the equipment.
- Check hoses, tubes, and couplings daily. Replace worn or damaged parts immediately.

**EQUIPMENT MISUSE HAZARD**
Misuse can cause death or serious injury.
- Do not operate the unit when fatigued or under the influence of drugs or alcohol.
- Do not exceed the maximum working pressure or temperature rating of the lowest rated system component. See **Technical Data** in all equipment manuals.
- Use fluids and solvents that are compatible with equipment wetted parts. See **Technical Data** in all equipment manuals. Read fluid and solvent manufacturer’s warnings. For complete information about your material, request MSDS forms from distributor or retailer.
- Check equipment daily. Repair or replace worn or damaged parts immediately with genuine manufacturer’s replacement parts only.
- Do not alter or modify equipment.
- Use equipment only for its intended purpose. Call your distributor for information.
- Route hoses and cables away from traffic areas, sharp edges, moving parts, and hot surfaces.
- Do not kink or over bend hoses or use hoses to pull equipment.
- Keep children and animals away from work area.
- Comply with all applicable safety regulations.

**TOXIC FLUID OR FUMES HAZARD**
Toxic fluids or fumes can cause serious injury or death if splashed in the eyes or on skin, inhaled, or swallowed.
- Read MSDS’s to know the specific hazards of the fluids you are using.
- Store hazardous fluid in approved containers, and dispose of it according to applicable guidelines.
- Always wear impervious gloves when spraying or cleaning equipment.

**PERSONAL PROTECTIVE EQUIPMENT**
You must wear appropriate protective equipment when operating, servicing, or when in the operating area of the equipment to help protect you from serious injury, including eye injury, inhalation of toxic fumes, burns, and hearing loss. This equipment includes but is not limited to:
- Protective eyewear
- Clothing and respirator as recommended by the fluid and solvent manufacturer
- Gloves
- Hearing protection
Isocyanate Hazard

Isocyanates (ISO) are catalysts used in two component foam and polyurea coatings. ISO will react with moisture (such as humidity) to form small, hard, abrasive crystals, which become suspended in the fluid. Eventually a film will form on the surface and the ISO will begin to gel, increasing in viscosity. If used, this partially cured ISO will reduce performance and the life of all wetted parts.

NOTE:
The amount of film formation and rate of crystallization varies depending on the blend of ISO, the humidity, and the temperature.

To prevent exposing ISO to moisture:
- Always use a sealed container with a desiccant dryer in the vent, or a nitrogen atmosphere. Never store ISO in an open container.
- Keep the ISO lube pump reservoir filled with Graco Throat Seal Liquid (TSL), Part 206995. The lubricant creates a barrier between the ISO and the atmosphere.
- Use moisture-proof hoses specifically designed for ISO, such as those supplied with your system.
- Never use reclaimed solvents, which may contain moisture. Always keep solvent containers closed when not in use.
- Never use solvent on one side if it has been contaminated from the other side.
- Always park pumps when you shutdown.
- Always lubricate threaded parts with Part 217374 ISO pump oil or grease when reassembling.

Spraying materials containing isocyanates creates potentially harmful mists, vapors, and atomized particulates.

Read material manufacturer’s warnings and material MSDS to know specific hazards and precautions related to isocyanates.

Prevent inhalation of isocyanate mists, vapors, and atomized particulates by providing sufficient ventilation in the work area. If sufficient ventilation is not available, a supplied-air respirator is required for everyone in the work area.

To prevent contact with isocyanates, appropriate personal protective equipment, including chemically impermeable gloves, boots, aprons, and goggles, is also required for everyone in the work area.

Material Self-Ignition

Some materials may become self-igniting if applied too thick. Read material manufacturer’s warnings and material MSDS.

Moisture Sensitivity of Isocyanates

Spraying materials containing isocyanates creates potentially harmful mists, vapors, and atomized particulates.

Read material manufacturer’s warnings and material MSDS to know specific hazards and precautions related to isocyanates.

Prevent inhalation of isocyanate mists, vapors, and atomized particulates by providing sufficient ventilation in the work area. If sufficient ventilation is not available, a supplied-air respirator is required for everyone in the work area.

To prevent contact with isocyanates, appropriate personal protective equipment, including chemically impermeable gloves, boots, aprons, and goggles, is also required for everyone in the work area.

Some materials may become self-igniting if applied too thick. Read material manufacturer’s warnings and material MSDS.
Keep Components A and B Separate

**NOTICE**
To prevent cross-contamination of the equipment’s wetted parts, *never* interchange component A (isocyanate) and component B (resin) parts. The gun is shipped with the A side on the left. The fluid manifold, fluid housing, side seal assembly, check valve cartridge, and mix chamber are marked on the A side.

**Changing Materials**

- When changing materials, flush the equipment multiple times to ensure it is thoroughly clean.
- Always clean the fluid inlet strainers after flushing.
- Check with your material manufacturer for chemical compatibility.
- Most materials use ISO on the A side, but some use ISO on the B side.
- Epoxies often have amines on the B (hardener) side. Polyureas often have amines on the B (resin) side.

- V Static Mixer Adapter
- W Static Mixing Element

312749H
Overview

XM plural-component sprayers can mix most two-component epoxy and urethane protective coatings. When using quick-setting materials (less than 10 minute pot life) a remote mix manifold must be used.

The left side of the mix manifold is intended for the major volume material, or the higher viscosity material if using a 1:1 volume mix. This side is referred to throughout the manual as the resin side or “A” side.

The right side is referred to as the Hardener side or “B” side. The “B” side incorporates a 40 mesh strainer and an adjustable restrictor for balancing the system back pressure and flow.

See Fig. 2 to view flow of A and B material inside the XM Mix Manifold.

NOTE: Always use the integration hose, supplied with your XM plural-component sprayer, after the mix manifold.

NOTE: Please follow these recommendations for setup:
- Use at least a 3/8 in. (10 mm) x 25 ft. (7 m) integrator hose.
- Install at least 24-elements of static mixer after the integration hose and before the spray gun whip hose.

FIG. 2: Cutaway View
Installation

For assistance in setting up a plural component sprayer, contact your Graco distributor, to ensure that you select the proper type and size equipment for your system.

Fluid Inlets

The A and B fluid inlets are equipped with 1/2 npsm unions in 1/2 in. npt(f) ports. Connect 1/2 in., 3/8 in, or 1/4 in. npsm(f) fluid hoses using the two adapter nipples (provided).

Remote Mounted Manifolds

Machine Outlet Check Valves

The XM sprayer must have outlet check valves (CV) in order to accurately measure pump outlet flow. These check valves are provided in the mix manifold when it is mounted on the sprayer.

When the mix manifold is removed and used remotely, you must add outlet check valves on the machine. Use shutoff check valves 255278 as the outlet check valves as provided in conversion kit 256980. The valves act as severe duty check valves when the check valve handle is open. They act as manual shutoff valves when the handle is closed.

Remote Circulation Control Valves

Shutoff check valves (CV) may also be face-mounted on the remote mix manifold to circulate heated material before spraying.

Machine Mounted Restrictor Valve

When the mix manifold is used remotely a restrictor valve (222200) is added to the B side outlet of the proportioner. This configuration requires that the machine outlet restrictor be used to set the bar graph on the Ratio Mode screen.
Grounding

Solvent Inlet

Connect the solvent supply line (G) from the solvent pump to the 1/4 npt(m) solvent inlet valve (F). Use a Graco approved grounded hose rated to withstand the maximum fluid working pressure of the solvent pump. The hose core must be chemically compatible with the solvent being used such as nylon or PTFE.

Fluid Outlet

Connect a 3/8 in. ID x 25 ft. (minimum) integrator hose (L) to the fluid outlet (R). Then connect the static mixers (S) and whip hose (T) to the 3/8 npt(f) integrator hose (L). Two static mixers are often used, in series.

Mounting

To mount the bare manifold, drill four holes in the mounting surface, and secure with four 5/16-18 x 1/2 in. (50 mm) screws. See the following illustration for details and dimensions.

- Mix manifold and solvent flush system: use only a Graco approved grounded solvent hose. Not all heated hoses are grounded, and the mix manifold primary ground is through the solvent hose. Ensure that the solvent pump is properly grounded, as instructed in your solvent pump manual. Ensure there is electrical continuity from the spray tip to the grounded solvent hose.
- Air compressor: Follow manufacturer’s recommendations.
- Spray gun/dispense valve: ground through connection to a properly grounded fluid hose and pump.
- Fluid supply container: follow local code.
- Object being sprayed: follow local code.
- Solvent pails used when flushing: follow local code. Use only conductive metal pails, placed on a grounded surface. Do not place the pail on a non-conductive surface, such as paper or cardboard, which interrupts grounding continuity.
- To maintain grounding continuity when flushing or relieving pressure: hold metal part of the spray gun/dispense valve firmly to the side of a grounded metal pail, then trigger the gun/valve.

Flush Before Using Equipment

The equipment was tested with lightweight oil, which is left in the fluid passages to protect parts. To avoid contaminating your fluid with oil, flush the equipment with a compatible solvent before using the equipment. See Flush, page 12.

Your system must be grounded. Read warnings in your sprayer manual. Check your local electrical code.

- Pump: use a ground wire and clamp as instructed in your sprayer operation manual.
- Air and fluid hoses: use only electrically conductive hoses with a maximum of 500 ft (150 m) combined hose length to ensure grounding continuity. Check electrical resistance of hoses. If total resistance to ground exceeds 29 megohms, replace hose immediately.
Operation

Pressure Relief Procedure

Follow pressure relief procedure when you stop spraying or dispensing; and before cleaning, checking, servicing, or transporting equipment.

Relieve A and B Fluid Pressure

1. Engage trigger lock.

2. Press Stop to turn off sprayer.

3. Close all air motor supply valves or any source of fluid pressure.

4. Open A and B circulation valves if equipped. See Fig. 3 and Fig. 4 on page 9.

5. If fluid heaters are used, shut them off using the controls on the heater control box.

6. Shut off feed pumps, if used.

7. Disengage trigger lock.

8. Hold a metal part of the gun firmly to a grounded metal pail with a splash guard in place. Trigger gun to relieve pressure in material hoses.

10. Flush mixed material hoses, mixer, and gun. See Flush on page 12.
Flush

Read warnings and grounding instructions in your sprayer manual. If your system uses heaters, shut off the main power to the heaters and heated hose control before flushing.

NOTE:
- Ensure flushing fluid is compatible with dispense fluid and the equipment wetted parts.
- Solvent may channel through viscous fluids and leave a coating of mixed fluid on the inner tube of your hose. Be sure all fluid is thoroughly flushed from the hose after each use.
- Remove spray tip for more thorough cleaning of the whip hose and static mixers.
- Use a solvent that dissolves the material you are mixing.
- Always leave equipment filled with fluid to avoid drying and scaling.

1. Relieve pressure; see page 11.
2. Engage trigger lock. Remove spray tip.
3. Close blue (E) A material and green (H) B material supply valves.

NOTE:
The valve handles point at each other in the closed position.

4. Open solvent inlet valve (F).
5. Turn on solvent flush pump.
6. Disengage spray gun trigger lock.
7. Trigger gun into a grounded metal pail with lid. Use a lid with a hole to dispense through to avoid splashing. Be careful to keep fingers away from front of gun. Flush out mixed material until clean solvent dispenses.
8. Turn off solvent pump air supply.
9. Hold the metal part of the gun firmly to a grounded metal pail with lid in place. Trigger gun until all fluid pressure is relieved.

10. Engage trigger lock.

11. Close solvent inlet valve (F).

### Dispensing and Spraying

1. Close solvent inlet valve (F).

2. Open blue (E) A material and green (H) B material valves.

3. Ensure sprayer is in “Spray Mode” and push start.

4. Disengage spray gun trigger lock.

5. Hold the metal part of the gun firmly to a grounded metal pail with a lid to avoid splashing. Trigger the gun until mixed coating material is evident and purge solvent is gone.

6. Proceed spraying.
Volume Balancing the Mix Manifold

When the mix manifold is remote mounted ratio errors can occur between the sprayer and the mix manifold; even when the sprayer output ratio is accurate.

The following can occur when the hoses are not volume balanced to the mix ratio:

- Hoses fill to high pressure while metering on ratio.
- Only the “A” material hose comes up to spray pressure.
- Off ratio at the mix point until hose pressures equalize.

Lead/Lag Imbalance

When resin and hardener volume requirements (ratio) and/or viscosities are different an imbalance can occur each time the gun is triggered. This occurs because the fluids can rush out of the manifold near a 1:1 ratio before the sprayer starts.

To avoid this imbalance:

- Add restriction on the hardener (low volume) side to balance the flow at the mix manifold.
- If the mix manifold is remote, pressurize hoses to spray pressure before starting spray mode when mix manifold is remote.
- If the mix manifold is remote, size the fluid delivery hose volume to nearly match the mix ratio. See Table 1.

Adjust B Mix Manifold Restriction on XM Sprayers While Spraying

Machine Mounted Mix Manifold

Adjust the restriction stem on the mix manifold to optimize the B side dosing control window. The goal is to create a constant flow on the A side and frequent dosing or a near constant flow on the B side. See the XM operation manual for instructions.

Remote Mounted Mix Manifold

Set Machine Restriction

With the restriction stem on the remote mix manifold open counter clockwise, adjust the restriction stem (222200) on the outlet of the proportioner to optimize the B side dosing control window. The goal is to create constant flow on the A side and frequent dosing or near constant flow on the B side. See the XM operation manual for instructions.

Set Mix Manifold Restriction

1. Adjust the restriction stem clockwise until the bar graph on the Ratio Mode screen starts moving to the left. The “B” dosing valve (blue) light will get brighter and the “B” dosing valve will open further.

2. Turn the restriction valve counter clockwise a half turn, and then lock the adjustment by tightening the nut.

Adjust Restriction on Early Xtreme Mix Sprayers

To check if the system is balanced watch the “B” dosing valves. The valve should be open (up) most of the time when the gun is triggered. If the “B” valve is giving only short “on” shots, adjust the restrictor in further. “B” fluid should flow most of the time, making only short “off” corrections.

Hose Selection For Feeding A Remote Mix Manifold

Hoses should be sized to match the hose volume ratio to the mix ratio. The hose size should also allow for minimum pressure drop on the major volume side to meet your flow requirements.

Use Table 1 to match mix ratio, hose selection, and volume ratio. Use Table 2 on page 15 to reference amount of pressure drop for 50 ft lengths of different hose sizes.

Size remote mix manifold hoses to:

- Minimize pressure drop on the high volume and often higher viscosity resin side to achieve higher flow and pressure at the gun while spraying.
- Allow both A and B material hoses to come up to spray pressure together when A and B fluids are metered into the hoses on ratio.
• Balance the inherent stall pressure between the resin “A” and hardener “B” sides when the gun closes and also when triggered. This reduces the lead/lag error at the mix point when the spray gun is triggered.

Example: At a 4:1 mix ratio, a 1/2 in. ID resin hose and a 1/4 in. ID hardener hose matches the 4:1 volume ratio.

Reference Formula
Pressure drop = 0.0273 QVL/D^4

Key:
Q = Vis poise.
V = Gallons per minute
L = Length (ft)
D = Inside diameter (in.)

#1 Example: What is the pressure loss of a 2000 cps material through 150 ft of 3/8 in. ID hose at 0.75 gpm?

690 psi (from chart) x 2 (viscosity factor 2 x 1000 cps) x 3 (3 x 50 ft hoses) x 0.75 (% of gpm) = 3105 psi loss

That is a lot of pressure loss before the spray gun. Let’s try 1/2 in. hose. See example #2.

#2 Example: What is the pressure loss of a 2000 cps material through 150 ft of 1/2 in. ID hose at 0.75 gpm?

218 psi (from chart) x 2 (viscosity factor 2 x 1000 cps) x 3 (3 x 50 ft hoses) x 0.75 (% of gpm) = 981 psi loss
Optional Recirculation

Ports are provided on the “A” and “B” sides for recirculating the material hoses back to the machine supplies.

To add remote recirculation, install shutoff check valves 255278 on front of mix manifold assembly. This is a high quality carbide ball and seat valve designed to close and be leak free when in spray mode.

Use adjustable restrictor valves 222200 to control the flow rate back into the supply.

NOTE:
When recirculation valves are moved remote down-stream of the dosing valves, the machine can no longer automatically check that the recirculation valves are closed and leak free when going into Spray Mode.

If the recirculation valves leak while you are spraying, you will be off ratio with no indication. See XM sprayer operation manual 312359 for more information.
# Troubleshooting

1. Relieve the pressure before you check or service any system equipment.

2. Check all possible causes and solutions in the troubleshooting chart before disassembling the manifold.

**Repair**

Follow **Pressure Relief Procedure** when you stop spraying and before cleaning, checking, servicing, or transporting equipment. Read warnings in your sprayer manual.

### NOTICE

- Be sure to label all fluid parts “resin” or “hardener” when disassembling them. Doing so prevents interchanging resin and hardener parts during reassembly, which will contaminate the materials and the fluid path through the equipment.

- Color-coded chemically resistant tape may be used to label the parts. Use blue for resin and green for hardener.

1. Relieve the pressure, see page 11.

3. Remove cap nut (CN) and handle (CH) from cartridge assembly (11). Use wrench to remove cartridge assemblies from manifold (1). See manual 313343 for repair instructions.

![Fig. 6](r_255684_256980_312749_18a)

4. Clean all parts thoroughly in a compatible solvent. Use a soft bristle brush to clean the manifold passageways.

### Remove Restrictor

1. Note number of turns from open to closed position. Remove restrictor housing (19) from manifold (1).

2. Place restrictor housing (19) in a vice and remove nut (20).

![Fig. 7](r_255684_256980_312749_9a)

3. Unscrew stem (18) clockwise and remove from restrictor housing (19).

![Fig. 8](r_255684_256980_312749_10a)

4. Remove and inspect o-rings (16, 17). Replace as necessary.

5. Remove set screw (15) and seat (14) from manifold (1).

![Fig. 9](r_255684_256980_312749_11a)
Assemble Restrictor

1. Insert seat (14) with larger tapered end facing up in manifold (1).

2. Apply blue thread lock to external threads of set screw (15) and install in manifold.

3. Install o-rings (16, 17) on stem (18) and insert stem into restrictor housing (19). Turn stem (18) counter-clockwise until in open position.

4. Loosely install lock nut (20) on stem (18).

5. Tighten restrictor housing (19) into manifold (1).

6. Tighten stem (18) down until it bottoms on seat (14). Then back stem out to previously noted position or two full turns and lock in place with lock nut (20).

Assemble Cartridge Assembly

1. Apply blue thread lock to external threads of cartridges (11) and install in manifold with stem backed out fully counter-clockwise. Place wrench on cartridge flats and torque to 125 ft-lbs (170 N•m). See Fig. 6 on page 18.

2. Install handle (CH) and cap nut (CN) on cartridge so that the handles point toward each other when closed.
Maintenance

Clean Static Mixers

See Fig. 1, page 7. Typically, two static mixer housings (S, Part No. 262478) are connected to the static mixer adapter (V) on the integrator hose (L). These housings use plastic mix elements, available in a package of 25 (W, Part No. 248927).

1. Relieve pressure, see page 11. Remove mixer housings (S) from integrator hose (L) and from whip hose (T).
2. Place flats of mixer housing (S) in a grounded vise. Push mix element (W) out of the inlet end.
3. If necessary, use a 1/2 in. drill bit to drill out old material and clean the mix element from the inlet end, down to the internal shoulder at the outlet end.
4. Use a brush to clean any debris in housing (S).
5. Insert new mix element, wide end first.

Clean “B” Screen

NOTE:
The following instructions apply only when using the strainer accessory for low viscosity fluids. See Accessories on page 26.

1. Remove “B” inlet union (31) from manifold block (1).
2. Pull “V” screen (28) and retainer o-ring (29) straight up and out with a needle nose pliers.
3. Clean or replace screen (28).
4. Reinstall screen (28) and white plastic o-ring (29) with tool 15T630 (included in repair kit 256238).

NOTE:
The o-ring (29) is used as a retainer ring, not a seal. It may be scratched or deformed from pushing the screen (28) back in.

5. Install “B” inlet union (31) on manifold block (1).

Clean Mix Manifold Outlet

1. Remove outlet fitting (33) to expose “B” center injection tube (9).
2. Clean any build-up on, around, or inside the tube (9).
3. Reinstall outlet fitting (33).

NOTICE
Never use a swivel union on the mixer inlets. The union will compress the tube and make it impossible to remove the mix element.
Apply lithium grease.
Apple anaerobic pipe thread sealant.
Apply blue thread lock to external threads.
Torque to 125 ft-lbs. (170 Nm).
Plastic assembly tool for (28), (29), and (11d) included in repair kit 256238.
U-cup open lips face spring.
After tightening valves (11) into housing (1), orient handles (23, 24) to face each other when closed.
Large end of inside taper faces out.
Accessory only.

**256980 Remote Mix Manifold Conversion Kit**  
(with outlet check/shut off valves and machine mounted restrictor valve)

Shutoff check valves must be used when using the mix manifold remote on an XM sprayer. Includes everything needed to move the existing mix manifold remote, except the A and B fluid hoses which should be chosen according to the guidelines starting on page 14.

**NOTE:** Extra hose nipples are included to accommodate 1/2 in. or 3/8 in. “A” hose and 1/2 in., 3/8 in., or 1/4 in. “B” hose.

⚠️ Mix manifold 255684 is not included (purchase separately). See page 21 for parts.

⚠️ Face down.

⚠️ “B” outlet to hose.

Accessories

255747, Shutoff Check Valve Cartridge Assembly
See manual 313343 for parts.

255278, Complete High Flow Sever Duty Shutoff Check Valve
Includes housing, screws, and o-ring for recirculation or machine with outlet valves. See manual 313343 for parts.

10,000 psi Fluid Pressure Gauge (2.5 in.)
114434 - 1/4 npt(m) back mount pressure gauge can be used in port (AB) as gun pressure gauge. Includes 316 stainless steel wetted.

551387 - 1/4 npt bottom mount version.

262522, Remote Mix Manifold Carriage (101)
The carriage holds and protects the mix manifold assembly. This requires four 5/16-18 x 1/2 in. screws.

262478, 7250 psi Static Mixer Housing
3/8 npt(m) holds 1/2 in. 12 element stick from 25 pack 248927.

248927, Plastic Mix Elements
25 pack of 1/2 in. x 12 elements plastic sticks.

511352, Mixer
Stainless 3/8 npt(m) pipe with 12 element stainless welded stick; 7250 psi (50 MPa, 500 bar).

15B729, Adapter Mixer Inlet
3/8 npt m x f; 7250 psi (50 MPa, 500 bar).

162024, Adapter Between Mix Tubes
3/8 npt f x f; 7250 psi (50 MPa, 500 bar).

B-side Screen
For low viscosity fluids only.
185416  STAINER; 40m
121410  PACKING, screen retainer

Accessory Ports

See FIG. 13.

(AA) Inlet Side - 1/2 in. npt(f)
These ports are located before “A” and “B” shutoff check valves. Use these ports for inlet gauges or recirculation. They also are equipped to manifold face mount 255278 circulation valves.

(AB) “A” Side After Shutoff - 1/4 in. npt(f)
These ports are located after “A” and “B” shutoff check valves. Use these ports as an outlet pressure gauge or as a second flush inlet for materials that require dual, separate flushing for complete flush material isolation.

(AC) “B” Side After Shutoff, Before Restrictor - 1/4 in. npt(f)
This port can be used as an alternate flush coming in before the restrictor on the “B” side.

FIG. 13: Accessory Ports
Technical Data

Maximum working pressure: 7250 psi (50 MPa, 500 bar)
Maximum fluid temperature: 160° F (71° C)
Fluid inlet: 1/2 in. npsm union with nipple adapters for 1/2 in., 3/8 in., or 1/4 in. hoses
Fluid outlet size: 1/2 npt(f) with 3/8 npt(m) adapter nipple
Solvent inlet valve: 1/4 npt(m)
Wetted parts:

*Manifold block and internal parts:* 302 and 303 stainless steel, PTFE, tungsten carbide, electroless nickel plated steel, zinc plated steel, UHMWPE
*Flush valves and fittings:* 440 stainless steel, plated carbon steel, hardened alloy steel, acetal, PTFE
Graco Standard Warranty

Graco warrants all equipment referenced in this document which is manufactured by Graco and bearing its name to be free from defects in material and workmanship on the date of sale to the original purchaser for use. With the exception of any special, extended, or limited warranty published by Graco, Graco will, for a period of twelve months from the date of sale, repair or replace any part of the equipment determined by Graco to be defective. This warranty applies only when the equipment is installed, operated and maintained in accordance with Graco’s written recommendations.

This warranty does not cover, and Graco shall not be liable for general wear and tear, or any malfunction, damage or wear caused by faulty installation, misapplication, abrasion, corrosion, inadequate or improper maintenance, negligence, accident, tampering, or substitution of non-Graco component parts. Nor shall Graco be liable for malfunction, damage or wear caused by the incompatibility of Graco equipment with structures, accessories, equipment or materials not supplied by Graco, or the improper design, manufacture, installation, operation or maintenance of structures, accessories, equipment or materials not supplied by Graco.

This warranty is conditioned upon the prepaid return of the equipment claimed to be defective to an authorized Graco distributor for verification of the claimed defect. If the claimed defect is verified, Graco will repair or replace free of charge any defective parts. The equipment will be returned to the original purchaser transportation prepaid. If inspection of the equipment does not disclose any defect in material or workmanship, repairs will be made at a reasonable charge, which charges may include the costs of parts, labor, and transportation.

**THIS WARRANTY IS EXCLUSIVE, AND IS IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.**

Graco’s sole obligation and buyer’s sole remedy for any breach of warranty shall be as set forth above. The buyer agrees that no other remedy (including, but not limited to, incidental or consequential damages for lost profits, lost sales, injury to person or property, or any other incidental or consequential loss) shall be available. Any action for breach of warranty must be brought within two (2) years of the date of sale.

**GRACO MAKES NO WARRANTY, AND DISCLAIMS ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IN CONNECTION WITH ACCESSORIES, EQUIPMENT, MATERIALS OR COMPONENTS SOLD BUT NOT MANUFACTURED BY GRACO.** These items sold, but not manufactured by Graco (such as electric motors, switches, hose, etc.), are subject to the warranty, if any, of their manufacturer. Graco will provide purchaser with reasonable assistance in making any claim for breach of these warranties.

In no event will Graco be liable for indirect, incidental, special or consequential damages resulting from Graco supplying equipment hereunder, or the furnishing, performance, or use of any products or other goods sold hereto, whether due to a breach of contract, breach of warranty, the negligence of Graco, or otherwise.

**FOR GRACO CANADA CUSTOMERS**

The Parties acknowledge that they have required that the present document, as well as all documents, notices and legal proceedings entered into, given or instituted pursuant hereto, or relating directly or indirectly hereto, be drawn up in English. Les parties reconnaissent avoir convenu que la rédaction du présent document sera en Anglais, ainsi que tous documents, avis et procédures judiciaires exécutés, donnés ou intentés, à la suite de ou en rapport, directement ou indirectement, avec les procédures concernées.
