Operation

TrueCoat™ and TrueCoat™ Plus Paint Sprayers
U.S. Patent No. D625,775 S; 6,619,569; D633,176 S; and other patents pending;
Community Design Registration #001225833; Community Design Registration #001228255;
India Patent No. 230061; China Patent No. ZL201030238948.3
Taiwan Patent No. D140774

- For portable spray applications of water-based and oil-based (mineral spirit-type)
architectural paints and coatings only-

IMPORTANT SAFETY INSTRUCTIONS
Read all warnings and instructions in this manual. Save these instructions.

Models 258870, 258875, 258866, and 258863
Maximum Working Pressure 2000 psi (137 bar, 13.7 MPa)

WARNING
Use only water-based or oil-based (mineral spirit-type) materials with flash point greater than 100° F
(38° C). Do not use materials which state “FLAMMABLE” on the packaging. For more information about
your material, request MSDS from distributor or retailer.
Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.

PROVEN QUALITY. LEADING TECHNOLOGY.

### Important User Information

Read this before using your sprayer. See the Operation Manual provided with your sprayer for complete instructions on proper use and safety warnings.

**DO NOT RETURN THIS SPRAYER TO THE STORE!**  
If you experience problems call Graco Customer Service at 1-888-541-9788.

Congratulations! You have purchased a high-quality paint sprayer made by Graco Inc. This sprayer is designed to provide superior spray performance with water-based and oil-based (mineral spirit-type) architectural paints and coatings. This user information sheet is intended to help you understand the types of materials that can and cannot be used with your sprayer.

Before using this equipment, be sure to read and follow the information on your container label and ask for a Material Safety Data Sheet (MSDS). The container label and MSDS will explain the contents of the material and the specific precautions related to it.

Paints, coatings and clean-up materials generally fit into one of the following 3 basic categories:

- **WATER-BASED**: The container label should indicate that the material can be cleaned up with soap and water. Your sprayer is compatible with this type of material. Your sprayer is **NOT** compatible with harsh cleaners such as chlorine bleach.

- **OIL-BASED**: The container label should indicate that the material is combustible and can be cleaned up with mineral spirits or paint thinner. The MSDS must indicate that the flash point of the material is above 100° F. Your sprayer is compatible with this type of material. Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air. See the safety warnings in your Operation Manual.

- **FLAMMABLE**: This type of material contains flammable solvents such as xylene, toluene, naphtha, MEK, lacquer thinner, acetone, denatured alcohol, and turpentine. The container label should indicate that this material is FLAMMABLE. This type of material is **NOT** compatible with your sprayer and **CANNOT** be used.
Warnings

The following warnings are for the setup, use, maintenance, and repair of this equipment. The exclamation point symbol alerts you to a general warning and the hazard symbols refer to procedure-specific risks. When these symbols appear in the body of this manual, refer back to these Warnings. Product-specific hazard symbols and warnings not covered in this section may appear throughout the body of this manual where applicable.

**GROUNDING**

This product must be grounded. In the event of an electrical short circuit, grounding reduces the risk of electric shock by providing an escape wire for the electric current. This product is equipped with a cord having a grounding wire with an appropriate grounding plug. The plug must be plugged into an outlet that is properly installed and grounded in accordance with all local codes and ordinances.

- Improper installation of the grounding plug is able to result in a risk of electric shock.
- When repair or replacement of the cord or plug is required, do not connect the grounding wire to either flat blade terminal.
- The wire with insulation having an outer surface that is green with or without yellow stripes is the grounding wire.
- Check with a qualified electrician or serviceman when the grounding instructions are not completely understood, or when in doubt as to whether the product is properly grounded.
- Do not modify the plug provided; if it does not fit the outlet, have the proper outlet installed by a qualified electrician.
- This product is for use on a nominal 120V circuit and has a grounding plug similar to the plug illustrated in the figure below.

- Only connect the product to an outlet having the same configuration as the plug.
- Do not use an adapter with this product.

**Extension Cords:**

- Use only a 3-wire extension cord that has a 3-blade grounding plug and a 3-slot receptacle that accepts the plug on the product.
- Make sure your extension cord is not damaged. When using an extension cord, be sure to use a cord heavy enough to carry the current that your sprayer draws. See chart for appropriate sizes and lengths:

<table>
<thead>
<tr>
<th>Extension Cord Gauge (AWG Minimum)</th>
<th>Extension Cord Length (Maximum)</th>
</tr>
</thead>
<tbody>
<tr>
<td>18</td>
<td>50 ft (15 m)</td>
</tr>
<tr>
<td>16</td>
<td>100 ft (30 m)</td>
</tr>
<tr>
<td>14</td>
<td>200 ft (60m)</td>
</tr>
</tbody>
</table>

- An undersized extension cord will result in a drop in line voltage and loss of power, overheating, and possible damage to equipment.
**FIRE AND EXPLOSION HAZARD**
Flammable fumes, such as solvent and paint fumes, in work area can ignite or explode. To help prevent fire and explosion:

- Sprayer generates sparks. Do not spray or flush with flammable liquids.
- Use only water-based or oil-based (mineral spirit-type) materials with a flash point greater than 100° F (38° C).
- Keep spray area well-ventilated. Keep a good supply of fresh air moving through the area.
- Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.
- Paint or solvent flowing through the equipment is able to result in static electricity. Static electricity creates a risk of fire or explosion in the presence of paint or solvent fumes. All parts of the spray system and objects in and around the spray area shall be properly grounded to protect against static discharge and sparks.
- Verify that all containers and collection systems are grounded to prevent static discharge.
- Connect to a grounded outlet and use grounded extensions cords. Do not use a 3-to-2 adapter.
- Do not smoke in the spray area.
- Do not operate light switches, engines, or similar spark producing products in the spray area.
- Keep area clean and free of paint or solvent containers, rags, and other flammable materials.
- Know the contents of the paints and solvents being sprayed. Read all Material Safety Data Sheets (MSDS) and container labels provided with the paints and solvents. Follow the paint and solvents manufacturer’s safety instructions.
- Fire extinguisher equipment shall be present and working.

**ELECTRIC SHOCK HAZARD**
This equipment must be grounded. Improper grounding, setup, or usage of the system can cause electric shock.

- Turn off and disconnect power cord before servicing equipment.
- Use only grounded electrical outlets.
- Use only 3-wire extension cords.
- Ensure ground prongs are intact on power and extension cords.
- Do not expose to rain. Store indoors.

**SKIN INJECTION HAZARD**
High-pressure spray is able to inject toxins into the body and cause serious bodily injury. In the event that injection occurs, get immediate surgical treatment.

- Do not aim the sprayer at, or spray any person or animal.
- Keep hands and other body parts away from the discharge. For example, do not try to stop leaks with any part of the body.
- Always engage the trigger lock when not spraying. Verify the trigger lock is functioning properly.
- Always use the nozzle tip guard. Do not spray without nozzle tip guard in place.
- Use caution when cleaning and changing nozzle tips. In the case where the nozzle tip clogs while spraying, follow the Pressure Relief Procedure for turning off the unit and relieving the pressure before removing the nozzle tip to clean.
- Do not leave the unit energized or under pressure while unattended. When the unit is not in use, turn off the unit and follow the Pressure Relief Procedure for turning off the unit.
- Check parts for signs of damage. Replace any damaged parts.
- This system is capable of producing 2000 psi. Use replacement parts or accessories that are rated a minimum of 2000 psi.
- Do not carry the tool with a finger on the trigger.
- Verify that all connections are secure before operating the unit.
- Know how to stop the unit and bleed pressure quickly. Be thoroughly familiar with the controls.

Using Electrical Cords

Grounding and Electrical Requirements

Sprayer must be grounded. Grounding reduces the risk of static and electric shock by providing an escape wire for electrical current due to static build up or in the event of a short circuit.

This 120 Vac sprayer requires a 120 Vac, 60 Hz, 15A circuit with a grounding receptacle.

Never use an outlet that is not grounded or an adapter.

Do not use the sprayer if the electrical cord has a damaged ground prong.

Power Cord

Damaged or entangled cords increase the risk of electric shock.

Do not abuse the sprayer cord.

Do NOT use the cord for carrying, pulling, or unplugging the sprayer.

Keep the cord away from heat, oil, sharp edges, and moving parts.

Do not operate the sprayer with a damaged cord.

Extension Cord Requirements

Only use an extension cord with an undamaged 3-prong plug.

When operating sprayer outdoors, use an extension cord suitable for outdoor use.

NOTE: When using an extension cord, always use a cord coupler or an extension cord with locking plugs to ensure that your sprayer maintains power during operation.

Your extension cord must have an adequate wire size (AWG or American Wire Gauge) to be able to carry the current that your sprayer draws. A smaller gauge number has a greater capacity than a large one. For example, 14 gauge wire has a greater capacity than 16 gauge wire. An undersized extension cord will result in a drop in line voltage and loss of power, overheating, and possible damage to equipment.

When using more than one extension cord, make sure each individual cord contains at least the minimum wire size needed. The table below shows the correct size to use depending on extension cord size and gauge. If you are unsure, it is better to use a heavier gauge than needed. Remember, a smaller number indicates a larger gauge wire.

<table>
<thead>
<tr>
<th>Extension Cord Gauge (AWG Minimum)</th>
<th>Extension Cord Length (Maximum)</th>
</tr>
</thead>
<tbody>
<tr>
<td>18</td>
<td>50 ft (15 m)</td>
</tr>
<tr>
<td>16</td>
<td>100 ft (30 m)</td>
</tr>
<tr>
<td>14</td>
<td>200 ft (60m)</td>
</tr>
</tbody>
</table>
Common Procedures

Pressure Relief Procedure

Do not operate or spray near children. Do not aim the sprayer at, or spray any person or animal. Keep hands and other body parts away from the front of the sprayer. For example, do not try to stop the paint flow with any part of the body.

This sprayer builds up an internal pressure of 2,000 psi during use. Follow this Pressure Relief Procedure whenever you stop spraying and before cleaning, checking, servicing, or transporting equipment to prevent serious injury.

1. Engage trigger lock.

2. Put control lever UP to release pressure.

Spray Tip Position

This sprayer comes with reversible spray tips. Tips can be rotated to two positions: SPRAY and UNCLOG.

Control Lever Position

Always perform Pressure Relief Procedure before adjusting spray tip position.

Tip Forward (SPRAY position)  Tip Reversed (UNCLOG position)

Trigger Lock

Always engage the trigger lock when you stop spraying to prevent the sprayer from being triggered accidentally by hand, or if dropped or bumped.

Trigger Locked  Trigger Unlocked (red ring is visible)
Setup

Overheating Protection

This sprayer has a built-in protective device to prevent damage from overheating. The sprayer may automatically shut down after heavy use. If this happens, allow the sprayer to cool down for 20-30 minutes and resume spraying.

Installing Suction Tube

Aim the inlet of the suction tube at the front of the material cup (towards Spray Tip/Guard Assembly) during installation.

Spraying Stains or Clear Coats (Fine-Finish Optimizer)

The Fine-Finish Optimizer must be installed and used when spraying thin material (similar to water) such as stain or clear coats. The Fine-Finish Optimizer restricts the material flow resulting in a finer quality finish.

NOTICE

Failure to install the Fine-Finish Optimizer when using the NAR311 tip or when spraying thin materials will cause the motor to overheat and shutdown until it cools.

Installation

1. Remove material cup and suction tube.

2. Remove the cleaning tool before installing the Fine-finish Optimizer into the sprayer.

3. Push Fine-Finish Optimizer into pump inlet until completely engaged and re-install suction tube.

Cleanup/Storage

Be sure to remove and clean the Fine-Finish Optimizer immediately after use. Store the Fine-Finish Optimizer on the Storage/cleaning Tool supplied to keep the hole clear of dried material.

NOTICE

Your sprayer is NOT compatible with harsh cleaners such as chlorine bleach. Using these cleaners will cause damage to the sprayer.

Use only water-based or oil-based (mineral spirit-type) materials with flash point greater than 100° F (38° C). Do not use materials which state “FLAMMABLE” on the packaging. For more information about your material, request MSDS from distributor or retailer.

Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.

Keep spray area well-ventilated. Keep a good supply of fresh air moving through the area.

Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.

Keep a good supply of fresh air moving through the area.

NOTICE

Failure to install the Fine-Finish Optimizer when using the NAR311 tip or when spraying thin materials will cause the motor to overheat and shutdown until it cools.
Sprayer Setup

This sprayer arrives from the factory with a small amount of test material in the system. **It is important that you flush this material or any storage fluid from the sprayer before using it.**

1. Plug sprayer into a properly-grounded outlet.

2. Fill material cup with water and thread onto sprayer.

3. Put control lever to UP position, then hold trigger in for 10 seconds.

4. Put control lever DOWN to spray position.

5. Reverse spray tip to UNCLOG position and trigger sprayer into a waste area.

6. Engage trigger lock and put control lever UP to release pressure.

7. Unscrew and remove material cup.

8. Disengage trigger lock, put control lever DOWN, hold sprayer slightly above material cup, and pull trigger to discharge fluid from pump.

9. Discard material in the cup.
Materials

Use only water-based or oil-based (mineral spirit-type) materials with flash point greater than 100°F (38°C). Do not use materials which state “FLAMMABLE” on the packaging. For more information about your material, request MSDS from distributor or retailer.

Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.

Keep spray area well-ventilated. Keep a good supply of fresh air moving through the area.

- When spraying water-based materials, flush the sprayer thoroughly with water.
- When spraying non-water-based materials, flush the sprayer thoroughly with mineral spirits or compatible, oil-based flushing fluid.

Starting a New Job (or Refilling the Cup)

1. Engage trigger lock and put control lever UP to release pressure.

2. Use your Fine-Finish Optimizer cleaning tool to lightly push on inlet valve to make sure it moves up and down freely.

3. Install material cup liner, fill with material, and thread onto sprayer.

4. To begin using, disengage trigger lock and trigger sprayer for 5-10 seconds. Then release trigger and put control lever DOWN to spray position.

5. Reverse spray tip to UNCLOG position and spray into waste area for 5 seconds. Then rotate tip back to SPRAY position. NOTE: Failure to perform this operation could result in poor spray pattern.

You are now ready to spray! If sprayer fails to prime, follow the Alternative Priming Method (page 23) and/or Inlet Valve Cleaning (page 24).

NOTE: If the sprayer is angled or tilted too far, the suction tube will lose contact with the material and the sprayer will stop spraying.
Install Tip/Guard Assembly (if not installed)

Reversible Tip Selection Chart

<table>
<thead>
<tr>
<th>MATERIALS</th>
<th>*Thin</th>
<th>Medium</th>
<th>Heavy</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td>311</td>
<td>315, 515</td>
<td>517</td>
<td></td>
</tr>
</tbody>
</table>

NOTE: Spraying thicker materials with a 311 tip may cause the motor to overheat. Use the Reversible Tip Chart to determine the correct tip for your application. If motor does overheat, allow sprayer to cool for 20-30 minutes before operating.

1. Engage trigger lock and put control lever UP to release pressure in the sprayer.

2. Install filter to Spray Tip/Guard Assembly. Make sure filter is fully installed into sprayer. NOTE: Filter assembly is reverse-threaded. Turn left (or counter-clockwise) to install. Turn right (or clockwise) to remove.

3. Firmly screw Tip/Guard Assembly onto sprayer. Tighten retaining nut until completely engaged with sprayer. If Tip/Guard Assembly is not fully tightened, poor spray results and possible damage to the sprayer could occur.

Shoulder Strap Installation

1. Attach the metal eyelet to the back of the sprayer.

2. Open the velcro end of the strap, then route it through the slot under the tip of the sprayer.

3. Route velcro up through the metal triangle, then fold down and attach velcro to strap.

NOTICE

Make sure filter is completely screwed into the Tip/Guard Assembly to avoid splattering material or damage to the filter.

NOTICE

The tip is permanently attached to the guard. Removing the tip from the guard will result in damage to tip assembly.

311 315, 515 517

NOTE: Spraying thicker materials with a 311 tip may cause the motor to overheat. Use the Reversible Tip Chart to determine the correct tip for your application. If motor does overheat, allow sprayer to cool for 20-30 minutes before operating.

NOTICE

The motor is a permanently attached to the guard. Removing the motor from the guard will result in damage to the motor assembly.

311 315, 515 517

Basic Spraying Techniques

NOTE: Use a piece of scrap cardboard to practice these basic spraying techniques before you begin spraying the surface. Anything you don’t want painted that is in the area of your spraying surface should be covered or removed.

Hold sprayer at least 10 in. (25 cm) from surface and adjust accordingly to achieve desired results. Aim sprayer straight at surface. Tilting sprayer to direct spray angle causes an uneven finish.

Flex your wrist while moving your arm to keep the sprayer pointed straight. Tilting the sprayer or spraying at an angle causes an uneven finish.

Triggering Sprayer
To achieve even spraying, pull trigger after starting the stroke. Release trigger before the end of the stroke. Sprayer must be moving when trigger is pulled and released.

Aiming Sprayer
Aim tip of sprayer at bottom edge of previous stroke, overlapping each stroke by half.

NOTE: How fast you move the sprayer will affect spray application. If material is pulsating, you are moving too fast. If material drips, you are moving too slow. See Troubleshooting, page 20.
Unclogging Spray Tip/Guard Assembly

Occasionally, debris from material can accumulate and clog the spray tip. Perform the following steps to unclog the tip.

1. To unclog tip obstruction, engage trigger lock and pull control lever UP to release pressure.

2. Reverse spray tip to UNCLOG position.

3. Aim sprayer at waste area, disengage trigger lock, and put control lever DOWN to spray position. Pull trigger to clear clog.

4. Engage trigger lock. Put control lever UP to release pressure and rotate spray tip back to SPRAY position.

5. Disengage trigger lock, put control lever DOWN to spray position, and resume spraying.

6. If tip is still clogged, you may have to repeat steps 1 - 5 and rotate the tip from SPRAY to UNCLOG several times. Repeat step 1 to release pressure, remove and clean filter, or replace with new tip assembly.

7. If obstruction is cleared, engage trigger lock and rotate arrow-shaped handle back to SPRAY position.

NOTE: Filter assembly is reverse-threaded: Turn left (or counter-clockwise) to install. Turn right (or clockwise) to remove.
Shutdown and Cleaning

**NOTICE**

Failure to properly clean sprayer after each use will result in hardened materials, damage to the sprayer, and the warranty will no longer be valid.

**Flushing Sprayer**

**NOTICE**

Failure to properly clean sprayer after each use will result in hardened materials, damage to the sprayer, and the warranty will no longer be valid.

1. Engage trigger lock and pull control lever UP to release pressure.

2. Remove material cup and properly dispose cup liner or excess material.

3. Remove and clean sprayer intake tube and screen with water (or flushing fluid) and a brush every time you flush the sprayer. Reconnect intake tube.

4. Clean cup if not using a liner, and fill with water or appropriate flushing fluid.

5. Reconnect material cup and shake sprayer to move clean water around and clean all areas inside of cup and underside of sprayer.

Use only water-based or oil-based (mineral spirit-type) materials with flash point greater than 100° F (38° C). Do not use materials which state “FLAMMABLE” on the packaging. For more information about your material, request MSDS from distributor or retailer.

Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.

**Keep spray area well-ventilated.** Keep a good supply of fresh air moving through the area.

**NOTICE**

Protect the internal parts of this sprayer from water. Do not submerge the sprayer in cleaning fluid. Openings in shroud allow cooling of mechanical parts and electronics inside. If water gets into these openings, the sprayer could malfunction or become permanently damaged.

Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.

**Keep spray area well-ventilated.** Keep a good supply of fresh air moving through the area.

Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.

**Keep spray area well-ventilated.** Keep a good supply of fresh air moving through the area.

Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.

**Keep spray area well-ventilated.** Keep a good supply of fresh air moving through the area.

Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.

**Keep spray area well-ventilated.** Keep a good supply of fresh air moving through the area.

Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.

**Keep spray area well-ventilated.** Keep a good supply of fresh air moving through the area.

Use oil-based material outdoors or in a well-ventilated indoor area with a flow of fresh air.

**Keep spray area well-ventilated.** Keep a good supply of fresh air moving through the area.
7. Discard contaminated fluid and refill with appropriate flushing fluid.

8. Disengage trigger lock, reverse tip to UNCLOG position, and pull trigger for 5 seconds to prepare sprayer.

9. Put control lever DOWN to spray position. Trigger sprayer into waste area until no paint appears in water or flushing fluid.

10. Engage trigger lock and put control lever UP to release pressure.

11. Remove material cup and discard used fluid.

12. Use a soft brush to clean the black rubber inlet seal. If the vent holes become clogged, use the Fine Finish Optimizer cleaning tool or a paper clip to clear the holes.

13. Remove Spray Tip/Guard Assembly and clean with water or flushing fluid. A soft brush can be used to loosen and remove dried material if needed. Run underwater and use a soft brush to clean the filter.

15. If you used the Fine-Finish Optimizer, remove and clean optimizer with water (or flushing fluid) and a brush. Reconnect intake tube.

To avoid serious injury or damage to equipment, do not expose the sprayer electronics to flushing solvents. Keep sprayer at least 10 in. above the rim of the container when flushing.

Keep spray area well-ventilated. Keep a good supply of fresh air moving through the area.

The tip is a permanently attached to the guard. Removing the tip from the guard will result in damage to tip assembly.
Cleaning Sprayer Exterior

- Wipe paint off outside of sprayer using a soft cloth moistened with water or flushing fluid. Do NOT submerge the sprayer.

Tips

- Tips will require replacement depending on abrasiveness of paint.
- Do not spray with worn tip. See Troubleshooting, page 20.

Storage

NOTICE

Failure to store with sprayer with Pump Armor will result in operational problems the next time you spray. Always circulate Pump Armor through the sprayer after cleaning. Water left in the sprayer will corrode and damage the pump.

1. Dilute 4 oz. bottle of Pump Armor Concentrate with an additional 4 oz. of water in material cup.

2. Thread cup into sprayer, put control lever to UP position and squeeze sprayer trigger for approximately 10 seconds.

3. Reverse spray tip to UNCLOG position, put control lever DOWN to spray position, and aim sprayer into waste area. Pull trigger for 1-2 seconds.

4. Properly dispose of used Pump Armor mixture from material cup and rinse cup with water.

5. Store sprayer indoors in a cool, dry place. Store storage case in an \textit{upright position only}.

</tr>
</tbody>
</table>

Troubleshooting
Alternate Priming Method

1. Engage trigger lock and put prime/relief valve UP to release pressure.

2. Remove material cup and fill with flushing material.

3. With sprayer in prime mode, turn sprayer upside-down, remove strainer and slowly pour flushing material into the intake tube until full.

4. Hold sprayer above sink or waste area, disengage the trigger lock, and quickly trigger sprayer until material comes out of the drain tube.

NOTE: Material can shoot out of the drain tube when performing this procedure. Be sure to wear appropriate safety equipment and point drain tube away from yourself when pulling the trigger.

5. Thread the material cup back onto sprayer.

6. Trigger the gun for 10 seconds then release the trigger and put the prime/relief valve DOWN to spray position.

7. Reverse spray tip to UNCLOG position and spray into waste area for five seconds to ensure sprayer has primed.

8. Sprayer is now ready to spray. Follow Starting New Job instructions on page 12.
Inlet Valve Cleaning

Removal

1. Engage trigger lock and pull relief valve UP to release pressure.

2. Remove material cup and suction tube.

3. Hold sprayer upside-down and use wrench or socket to loosen and remove inlet fitting, inlet valve, and spring.

   NOTE: Make sure the spring also comes out. Use needle-nose pliers to remove if needed. Inlet cavity should be completely empty (as shown below).

4. Clean as much excess material from pump cavity as possible. Make sure you also clean spring (a), o-ring (c), and top of inlet fitting (d).

Installation

NOTE: Before installing, make sure o-ring (c) is installed on inlet valve (b).

1. Place inlet valve (b) with spring (a) on top of inlet fitting (d). Push inlet fitting up into pump cavity.

2. Hold inlet in place and turn sprayer upside-down. Remove inlet fitting and visually check to see that inlet valve has seated correctly.

3. Replace inlet fitting and use wrench and socket to tighten to 10 ft-lb.

   NOTICE
   Do NOT over-tighten inlet fitting. Damage to the equipment will occur.

4. Use your Fine-Finish Optimizer cleaning tool to lightly push on inlet valve to make sure it moves up and down freely.

◆ Pump damage will occur if fluid freezes in pump.
❖ Damage to plastic parts may result if impact occurs in low temperature conditions.
✔ Changes in paint viscosity at very low or very high temperatures can affect sprayer performance.
Graco Standard Warranty

Graco warrants all equipment referenced in this document which is manufactured by Graco and bearing its name to be free from defects in material and workmanship on the date of sale to the original purchaser for use. With the exception of any special, extended, or limited warranty published by Graco, Graco will, for a period of twelve months from the date of sale, repair or replace any part of the equipment determined by Graco to be defective. This warranty applies only when the equipment is installed, operated and maintained in accordance with Graco’s written recommendations.

This warranty does not cover, and Graco shall not be liable for general wear and tear, or any malfunction, damage or wear caused by faulty installation, misapplication, abrasion, corrosion, inadequate or improper maintenance, negligence, accident, tampering, or substitution of non-Graco component parts. Nor shall Graco be liable for malfunction, damage or wear caused by the incompatibility of Graco equipment with structures, accessories, equipment or materials not supplied by Graco, or the improper design, manufacture, installation, operation or maintenance of structures, accessories, equipment or materials not supplied by Graco.

This warranty is conditioned upon the prepaid return of the equipment claimed to be defective to an authorized Graco distributor for verification of the claimed defect. If the claimed defect is verified, Graco will repair or replace free of charge any defective parts. The equipment will be returned to the original purchaser transportation prepaid. If inspection of the equipment does not disclose any defect in material or workmanship, repairs will be made at a reasonable charge, which charges may include the costs of parts, labor, and transportation.

THIS WARRANTY IS EXCLUSIVE, AND IS IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.

Graco’s sole obligation and buyer’s sole remedy for any breach of warranty shall be as set forth above. The buyer agrees that no other remedy (including, but not limited to, incidental or consequential damages for lost profits, lost sales, injury to person or property, or any other incidental or consequential loss) shall be available. Any action for breach of warranty must be brought within two (2) years of the date of sale.

GRACO MAKES NO WARRANTY, AND DISCLAIMS ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IN CONNECTION WITH ACCESSORIES, EQUIPMENT, MATERIALS OR COMPONENTS SOLD BUT NOT MANUFACTURED BY GRACO. These items sold, but not manufactured by Graco (such as electric motors, switches, hose, etc.), are subject to the warranty, if any, of their manufacturer. Graco will provide purchaser with reasonable assistance in making any claim for breach of these warranties.

In no event will Graco be liable for indirect, incidental, special or consequential damages resulting from Graco supplying equipment hereunder, or the furnishing, performance, or use of any products or other goods sold hereto, whether due to a breach of contract, breach of warranty, the negligence of Graco, or otherwise.

FOR GRACO CANADA CUSTOMERS

The Parties acknowledge that they have required that the present document, as well as all documents, notices and legal proceedings entered into, given or instituted pursuant hereto or relating directly or indirectly hereto, be drawn up in English. Les parties reconnaissent avoir convenu que la rédaction du présent document sera en Anglais, ainsi que tous documents, avis et procédures judiciaires exécutés, donnés ou intentés, à la suite de ou en rapport, directement ou indirectement, avec les procédures concernées.
