Husky® 3300 Air-Operated Diaphragm Pump

Heavy-duty 3-inch pump with large flow paths for fluid transfer applications, including high-viscosity materials. For professional use only.

See page 4 for model information, including approvals.

125 psi (0.86 MPa, 8.6 bar) Maximum Working Pressure, Aluminum or Stainless Steel Pumps with Aluminum Center Section
100 psi (0.7 MPa, 6.9 bar) Maximum Working Pressure, Polypropylene or Stainless Steel Pumps with Polypropylene Center Section

To Find Your Nearest Distributor

2. Click on Where to Buy and use the Distributor Locator.

To Specify the Configuration of a New Pump

Please call your distributor.

OR

1. Use the Online Husky Selector Tool at www.graco.com/training/husky/index.html.
2. If the link does not work, you will find the selector tool on the Process Equipment page at www.graco.com.

To Order Replacement Parts

Please call your distributor.

Distributor Note

1. To find part numbers for new pumps or kits, use the Online Husky Selector Tool.
2. To find part numbers for replacement parts:
   a. Use the configuration number from the ID plate on the pump. If you only have the Graco 6-digit part number, use the selector tool to find the corresponding configuration number.
   b. Use the Configuration Number Matrix on the next page to understand which parts are described by each digit.
   c. Refer to the main Parts 3300A, Aluminum illustration and to the Parts/Kits Quick Reference. Follow the page references on these two pages for further ordering information, as needed.
3. Please call Graco Customer Service to order.
# Configuration Number Matrix

Check the identification plate (ID) for the Configuration Number of your pump. Use the following matrix to define the components of your pump.

**Sample Configuration Number: 3300A-PA01AA1TPACTPBN**

<table>

★ **3300A** (aluminum) and **3300S** (stainless steel) pumps with aluminum center sections are certified:

ATEX T-code rating is dependent on the temperature of the fluid being pumped. Fluid temperature is limited by the materials of the pump interior wetted parts. See Technical Data for the maximum fluid operating temperature for your specific pump model.

† Pumps with polypropylene fluid or center sections are not ATEX certified.

## Warnings

The following warnings are for the setup, use, grounding, maintenance, and repair of this equipment. The exclamation point symbol alerts you to a general warning and the hazard symbol refers to procedure-specific risk. When these symbols appear in the body of this manual, refer back to these Warnings. Additional, product-specific warnings may be found throughout the body of this manual where applicable.

### FIRE AND EXPLOSION HAZARD

Flammable fumes, such as solvent and paint fumes, in work area can ignite or explode. To help prevent fire and explosion:

- Use equipment only in well ventilated area.
- Eliminate all ignition sources; such as pilot lights, cigarettes, portable electric lamps, and plastic drop cloths (potential static arc).
- Keep work area free of debris, including solvent, rags and gasoline.
- Do not plug or unplug power cords, or turn power or light switches on or off when flammable fumes are present.
- Ground all equipment in the work area. See Grounding instructions.
- Use only grounded hoses.
- Hold gun firmly to side of grounded pail when triggering into pail. Do not use pail liners unless they are antistatic or conductive.
- **Stop operation immediately** if static sparking occurs or you feel a shock. Do not use equipment until you identify and correct the problem.
- Keep a working fire extinguisher in the work area.
- Route exhaust away from all ignition sources. If diaphragm ruptures, fluid may be exhausted with air.

Static charge may build up on plastic parts during cleaning and could discharge and ignite flammable vapors. To help prevent fire and explosion:

- Clean plastic parts only in a well ventilated area.
- Do not clean with a dry cloth.
- Do not operate electrostatic guns in equipment work area.

### PRESSURIZED EQUIPMENT HAZARD

Fluid from the equipment, leaks, or ruptured components can splash in the eyes or on skin and cause serious injury.

- Follow the Pressure Relief Procedure when you stop spraying/dispensing and before cleaning, checking, or servicing equipment.
- Tighten all fluid connections before operating the equipment.
- Check hoses, tubes, and couplings daily. Replace worn or damaged parts immediately.
<table>
<thead>
<tr>
<th>Warnings</th>
</tr>
</thead>
</table>

**EQUIPMENT MISUSE HAZARD**
Misuse can cause death or serious injury.

- Do not operate the unit when fatigued or under the influence of drugs or alcohol.
- Do not exceed the maximum working pressure or temperature rating of the lowest rated system component. See *Technical Data* in all equipment manuals.
- Use fluids and solvents that are compatible with equipment wetted parts. See *Technical Data* in all equipment manuals. Read fluid and solvent manufacturer’s warnings. For complete information about your material, request MSDS from distributor or retailer.
- Do not leave the work area while equipment is energized or under pressure.
- Turn off all equipment and follow the **Pressure Relief Procedure** when equipment is not in use.
- Check equipment daily. Repair or replace worn or damaged parts immediately with genuine manufacturer’s replacement parts only.
- Do not alter or modify equipment. Alterations or modifications may void agency approvals and create safety hazards.
- Make sure all equipment is rated and approved for the environment in which you are using it.
- Use equipment only for its intended purpose. Call your distributor for information.
- Route hoses and cables away from traffic areas, sharp edges, moving parts, and hot surfaces.
- Do not kink or over bend hoses or use hoses to pull equipment.
- Keep children and animals away from work area.
- Comply with all applicable safety regulations.

**THERMAL EXPANSION HAZARD**
Fluids subjected to heat in confined spaces, including hoses, can create a rapid rise in pressure due to the thermal expansion. Over-pressurization can result in equipment rupture and serious injury.

- Open a valve to relieve the fluid expansion during heating.
- Replace hoses proactively at regular intervals based on your operating conditions.

**PRESSURIZED ALUMINUM PARTS HAZARD**
Use of fluids that are incompatible with aluminum in pressurized equipment can cause serious chemical reaction and equipment rupture. Failure to follow this warning can result in death, serious injury, or property damage.

- Do not use 1,1,1-trichloroethane, methylene chloride, other halogenated hydrocarbon solvents or fluids containing such solvents.
- Many other fluids may contain chemicals that can react with aluminum. Contact your material supplier for compatibility.

**PLASTIC PARTS CLEANING SOLVENT HAZARD**
Many solvents can degrade plastic parts and cause them to fail, which could cause serious injury or property damage.

- Use only compatible water-based solvents to clean plastic structural or pressure-containing parts.
- See *Technical Data* in this and all other equipment instruction manuals. Read fluid and solvent manufacturer’s MSDSs and recommendations.
### TOXIC FLUID OR FUMES HAZARD
Toxic fluids or fumes can cause serious injury or death if splashed in the eyes or on skin, inhaled, or swallowed.

- Read MSDSs to know the specific hazards of the fluids you are using.
- Route exhaust away from work area. If diaphragm ruptures, fluid may be exhausted into the air.
- Store hazardous fluid in approved containers, and dispose of it according to applicable guidelines.

### BURN HAZARD
Equipment surfaces and fluid that’s heated can become very hot during operation. To avoid severe burns:

- Do not touch hot fluid or equipment.

### PERSONAL PROTECTIVE EQUIPMENT
Wear appropriate protective equipment when in the work area to help prevent serious injury, including eye injury, hearing loss, inhalation of toxic fumes, and burns. This equipment includes but is not limited to:

- Protective eyewear, and hearing protection.
- Respirators, protective clothing, and gloves as recommended by the fluid and solvent manufacturer.
## Troubleshooting

Repair

Pressure Relief Procedure

Follow the Pressure Relief Procedure whenever you see this symbol.

This equipment stays pressurized until pressure is relieved manually. To help prevent serious injury from pressurized fluid, such as splashing in the eyes or on skin, follow the Pressure Relief Procedure whenever you stop pumping and before you clean, check, or service the equipment.

1. Shut off the air supply to the pump.
2. Open the dispensing valve, if used.
3. Open the fluid drain valve to relieve fluid pressure. Have a container ready to catch the drainage.

Replace Seals or Rebuild Air Valve

NOTE: Repair kits are available. See page 31 to order the correct kit(s) for your pump. Air Valve Seal Kit parts are marked with a †. Air Valve Repair Kit parts are marked with a ◆. Air Valve End Cap Kit parts are marked with a ★.

Disassemble the Air Valve

NOTE: The detent assembly (203), cam (204) and spring (211) are not used in air valve 24V231, for models with PTFE overmolded diaphragms (P01G).

1. Perform steps 1-3 under Replace Complete Air Valve, page 10.
2. See Fig. 2. Use a Torx screwdriver (T8 for aluminum centers, T10 for plastic centers) to remove two screws (209). Remove the valve plate (205), cup assembly (212-214), spring (211), and detent assembly (203).
3. Pull the cup (213) off of the base (212). Remove the o-ring (214) from the cup.
4. See Fig. 2. Remove the retaining ring (210) from each end of the air valve. Use the piston (202) to push the end cap (207) out of one end. Remove the u-cup seal (208). Pull the piston out the end and remove the other u-cup seal (208). Remove the other end cap (207) and the end cap o-rings (206).
5. Remove the detent cam (204) from the air valve housing (201).

Replace Complete Air Valve

1. Stop the pump. Relieve the pressure. See Pressure Relief Procedure in previous section.
2. Disconnect the air line to the motor.
3. Remove screws (104, metal pumps) or nuts (116, plastic pumps). Remove the air valve and gasket (113).
4. To repair the air valve, go to Disassemble the Air Valve, step 1, in next section. To install a replacement air valve, continue with step 5.
5. Align the new air valve gasket (113*) on the center housing, then attach the air valve. See Torque Instructions, page 20.
6. Reconnect the air line to the motor.

Replace or Replace Air Valve

NOTE: The detent assembly (203), cam (204) and spring (211) are not used in air valve 24V231, for models with PTFE overmolded diaphragms (P01G).

1. Perform steps 1-3 under Replace Complete Air Valve, page 10.
2. See Fig. 2. Use a Torx screwdriver (T8 for aluminum centers, T10 for plastic centers) to remove two screws (209). Remove the valve plate (205), cup assembly (212-214), spring (211), and detent assembly (203).
3. Pull the cup (213) off of the base (212). Remove the o-ring (214) from the cup.
4. See Fig. 2. Remove the retaining ring (210) from each end of the air valve. Use the piston (202) to push the end cap (207) out of one end. Remove the u-cup seal (208). Pull the piston out the end and remove the other u-cup seal (208). Remove the other end cap (207) and the end cap o-rings (206).
5. Remove the detent cam (204) from the air valve housing (201).
Reassemble the Air Valve

**NOTE:** Apply lithium-based grease whenever instructed to grease. Order Graco PN 111920.

**NOTE:** The detent assembly (203), cam (204) and spring (211) are not used in air valve 24V231, for models with PTFE overmolded diaphragms (P01G).

1. Use all parts in the repair kits. Clean other parts and inspect for damage. Replace as needed.

2. Grease the detent cam (204†) and install into housing (201).

3. Grease the u-cups (208†) and install on the piston with lips facing toward the center of the piston.

4. Grease both ends of the piston (202†) and the housing bore. Install the piston in the housing (201), with the flat side toward the cup (213†). Be careful not to tear u-cups (208†) when sliding piston into housing.

5. Grease new o-rings (206†) and install on the end caps (207†). Install the end caps into the housing.

6. Install a retaining ring (210†) on each end to hold end caps in place.

---

**Fig. 1. Air valve u-cup installation**

**Fig. 2. Air valve assembly**
7. Grease and install the detent assembly (203) into the piston. Install the o-ring (214) on the cup (213). Apply a light film of grease to the outside surface of the o-ring and the inside mating surface of the base (212).

Orient the end of the base that has a magnet toward the end of the cup that has the larger cutout. Engage the opposite end of the parts. Leave the end with the magnet free. Tilt the base toward the cup and fully engage the parts, using care so that the o-ring remains in place. Install the spring (211) onto the protrusion on the cup. Align the magnet in the base with the air inlet and install the cup assembly.

8. Grease the cup side and install the valve plate (205). Align the small hole in the plate with the air inlet. Tighten the screws (209†) to hold it in place.

---

Check Valve Repair

**Note:** Kits are available for new check valve balls and seats in a range of materials. See page 34 to order kits in the material(s) desired. O-ring and fastener kits also are available.

**Note:** To ensure proper seating of the check balls, always replace the seats when replacing the balls. Also, on models with seat o-rings, replace the o-rings every time the manifold is removed.

---

Disassembly

1. Follow the **Pressure Relief Procedure** on page 10. Disconnect all hoses.

**Note:** The pump is heavy. Always use two people or a lift to move it.

2. Remove the pump from its mounting.

**Note:** For plastic pumps (3300P), use hand tools until thread-locking adhesive patch releases.

3. Use a 3/4 in. (19 mm) socket wrench to remove the outlet elbow fasteners (8), then remove the manifold assembly. See Fig. 4.

4. Remove the o-rings (13, *not used on some models*), seats (11), and balls (12).

5. Turn the pump over and remove the inlet manifold. The mounting brackets will remain attached.

6. Remove the o-rings (13, *not used on some models*), seats (11), and balls (12).

---

Reassembly

1. Clean all parts and inspect for wear or damage. Replace parts as needed.

2. Reassemble in the reverse order, following all notes in Fig. 4. Put the inlet manifold on first. Be sure the ball checks (11-13) and manifolds are assembled exactly as shown. The arrows (A) on the fluid covers must point toward the outlet manifold.
⚠ Torque to 40-45 ft-lb (54-61 N•m) for Polypropylene models.
Torque to 55-60 ft-lb (75-81 N•m) for Aluminum models.
Torque to 40-45 ft-lb (54-61 N•m) for Stainless Steel models.
See Torque Instructions, page 20.

⚠ Arrow (A) must point toward outlet manifold.
⚠ Not used on some models.

Fig. 4. Ball check valve assembly
Diaphragms and Center Section

Disassembly

NOTE: Diaphragm kits are available in a range of materials and styles. See page 35 to order the correct diaphragms for your pump. A Center Rebuild Kit also is available. See page 29. Parts included in the Center Rebuild Kit are marked with an *. For best results, use all kit parts.

1. Follow the Pressure Relief Procedure on page 10.

2. Remove the manifolds and disassemble the ball check valves as explained on page 12.

NOTE: You may wish to remove the inner fluid cover bolts (37) as you remove each manifold, for convenience.

3. Overmolded Diaphragms (PO and CO models)
   a. Orient the pump so one of the fluid covers faces up. Use a 3/4 in. (19 mm) socket wrench to remove the fluid cover bolts (36, 37), then pull the fluid cover (2) up off the pump.
   b. The exposed diaphragm (20) will screw off by hand. The shaft will either release and come off with this diaphragm, or remain attached to the other diaphragm. If the diaphragm shaft bolt (16) remains attached to the shaft (108), remove it. Remove the air side diaphragm plate (14) and washer (18).
   c. Turn the pump over and remove the other fluid cover. Remove the diaphragm (and the shaft, if necessary).
   d. If the shaft is still attached to either diaphragm, grasp the diaphragm firmly and use a wrench on the flats of the shaft to remove. Also remove the air side diaphragm plate (14) and washer (18). Continue with Step 5.

4. All Other Diaphragms
   a. Orient the pump so one of the fluid covers faces up. Use a 3/4 in. (19 mm) socket wrench to remove the fluid cover screws (36, 37), then pull the fluid cover (2) up off the pump. Turn the pump over and remove the other fluid cover.

b. Plastic Pumps: Hold the hex of one fluid side diaphragm plate (15) with a 1-5/8 socket or box end wrench. Use another wrench (same size) on the hex of the other plate to remove. Then remove all parts of the diaphragm assembly. See Fig. 7.
   
   Metal Pumps: Turn the pump on its side. Hold one diaphragm shaft bolt (16) with a wrench, then use a 15/16 socket to remove the other bolt. Remove all parts of the diaphragm assembly. See Fig. 7, page 17.
   
   c. Disassemble the other diaphragm assembly.

5. Use an o-ring pick to remove the u-cup packings (101) from the center housing. Bearings (109) can remain in place.

6. If necessary, remove the pilot valves (110).

Air Covers

Remove air covers only if a serious air leak suggests that the gaskets need to be replaced.

1. Remove pilot valves (110).

2. Use a 3/8 allen wrench (aluminum) or a 5/8 socket (polypropylene) to remove two bolts (103), then remove one air cover (105). Repeat for the other air cover.

3. Remove and replace the gasket (107).

4. Inspect the diaphragm shaft (108) for wear or scratches. If it is damaged, inspect the bearings (109) in place. If they are damaged, use a bearing puller to remove them.

NOTE: Do not remove undamaged bearings.
Reassembly of Housing Parts and Air Covers

Follow all notes in Fig. 7. These notes contain important information.

**NOTE:** Apply lithium-based grease whenever instructed to grease. Order Graco PN 111920.

1. Clean all parts and inspect for wear or damage. Replace parts as needed.

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unwanted pressurized air due to worn seals can lead to reduced diaphragm life.</td>
</tr>
</tbody>
</table>

2. Grease and install the diaphragm shaft u-cup packings (101*) so the lips face out of the housing.

3. If removed, insert the new bearings (109*) into the center housing. Use a press or a block and rubber mallet to press-fit the bearing so it is flush with the surface of the center housing.

4. Assemble air covers, if removed:
   a. Put one air cover on the bench. Install the alignment pins (112*) and a new gasket (107*).
   b. Carefully place the center section on the air cover.
   c. Install second set of alignment pins (112*) and gasket (107*) in the center section. Lower the second air cover onto the center housing.
   d. **Aluminum Centers:** Apply medium-strength (blue) thread locker on the bolts (103). Install two bolts and torque to 30-40 ft-lb (41-54 N•m). Turn the pump over on the bench and install and torque the other two bolts.
   **Polypropylene Centers:** Apply medium-strength (blue) thread locker on the bolts (103) and install a washer (119) on each bolt. Turn the assembly on its side. The alignment pins will help hold it together. Slide one bolt (103) through from one air cover to the other. Install a washer (119) and nut (118), hand tight. Repeat for the other three bolts, then torque to 25-35 ft-lb (34-47 N•m).

5. Grease and install the pilot valves (110*). Torque to 20-25 in.-lb (2.3-2.8 N•m). Do not over-torque.

- **Apply lithium-based grease.**
- **Lips must face out of housing.**
- **Aluminum:** Torque to 30-40 ft-lb. (41-54 N•m).
- **Poly:** Torque to 25-35 ft-lb. (34-47 N•m).
- **Torque to 20-25 in.-lb (2.3-2.8 N•m).**

**Polypropylene Model Shown**

![Polypropylene Model Shown](image-url)
Reassembly of Standard Diaphragms

**NOTE:** If your pump has overmolded diaphragms, see page 19.

**PTFE Diaphragms**

1. Clean all parts and inspect for wear or damage. Replace parts as needed.

2. Clamp the shaft flats in a vise.

3. For metal pumps, install the washer (18) and o-ring (17) on the shaft bolt (16).

4. Assemble the fluid side plate (15), the diaphragm (20), the backup diaphragm (305), the air side diaphragm plate (14), and the washer (18) on the bolt exactly as shown in FIG. 7.

5. Apply medium-strength (blue) thread locker to the bolt (16) threads. Assemble into shaft. Torque the bolt to 110 -120 ft-lb (149-163 N•m) at 100 rpm maximum.

6. Grease the shaft u-cups (101*) and the length and ends of the diaphragm shaft (108*). Slide the shaft into the housing.

7. Repeat Steps 3 and 4 for the other diaphragm assembly.

8. Apply medium-strength (blue) thread locker to the bolt (16) threads. Screw the bolt into the shaft hand tight.

9. To keep the diaphragms properly aligned, place 4 bolts on the side that has been torqued. Screw into the air cover just enough to engage two threads.

**NOTE:** The fluid cover bolts may work well, or use shop bolts. Do not use bolts that are long enough to deform the diaphragm manually.

10. Clamp the torqued side in a vise.

11. Again align the diaphragm and air cover holes on the second side and place 4 more bolts.

12. Torque the shaft bolt on the second side to 110 -120 ft-lb (149-163 N•m) at 100 rpm maximum.

13. Remove the bolts used for alignment.

14. Reattach one fluid cover (2). Arrow (A) must point toward the air valve. See **Torque Instructions**, page 20.

15. Follow directions under **Attach Second Fluid Cover**, page 19.

16. Reassemble the ball check valves and manifolds as explained on page 12.
Fig. 7. Assemble diaphragms

⚠️ Rounded side faces diaphragm.
⚠️ Apply lithium-based grease.
⚠️ Torque to 110-120 ft-lb. (149-163 N•m) at 100 rpm maximum.
⚠️ AIR SIDE markings on diaphragm must face center housing.
⚠️ If screw comes loose or is replaced, apply permanent (red) thread locker to diaphragm side threads. Apply primer and medium-strength (blue) thread locker to shaft side threads.
**All Other Standard Diaphragms - Metal Pumps:**

1. Install the washer (18) and o-ring (17) on the shaft bolt (16).

2. Assemble the fluid side plate (15), the diaphragm (20), the air side diaphragm plate (14), and the washer (18) on the bolt exactly as shown in Fig. 7.

3. Apply medium-strength (blue) thread locker to the bolt (16) threads. Screw the bolt into the shaft hand-tight.

4. Grease the shaft u-cups (101*) and the length and ends of the diaphragm shaft (108*). Slide the shaft into the housing.

5. Repeat Steps 1-5 for the other diaphragm assembly.

6. Hold one shaft bolt with a wrench and torque the other bolt to 110-120 ft-lb (149-163 N•m) at 100 rpm maximum. Do not over-torque.

7. Reattach one fluid cover (2). Arrow (A) must point toward the air valve. See **Torque Instructions**, page 20.

8. **TP, SP, and GE Models:** Follow directions under **Attach Second Fluid Cover**, page 19.

   **CR, BN, and FK Models:** Reattach the second fluid cover (2). Arrow (A) must point toward the air valve. See **Torque Instructions**, page 20.

9. Reassemble the ball check valves and manifolds as explained on page 12.

**All Other Standard Diaphragms - Plastic Pumps:**

1. Assemble the diaphragm (20), the air side diaphragm plate (14), and the washer (18) on the fluid side plate (15) exactly as shown in Fig. 7.

2. Apply medium-strength (blue) thread locker to the threads of the screw on the fluid side plate. Screw the assembly into the shaft hand-tight.

3. Grease the shaft u-cups (101*) and the length and ends of the diaphragm shaft (108*). Slide the shaft into the housing.

4. Repeat for the other diaphragm assembly.

5. Hold one of the plates with a wrench, and torque the other plate to 110-120 ft-lb (149-163 N•m) at 100 rpm maximum. Do not over-torque.

6. Reattach one fluid cover (2). Arrow (A) must point toward the air valve. See **Torque Instructions**, page 20.

7. **TP, SP, and GE Models:** Follow directions under **Attach Second Fluid Cover**, page 19.

   **CR, BN, and FK Models:** Reattach the second fluid cover (2). Arrow (A) must point toward the air valve. See **Torque Instructions**, page 20.

8. Reassemble the ball check valves and manifolds as explained on page 12.
Attach Second Fluid Cover

To reduce the risk of serious injury, do not put your fingers or hand between the air cover and the diaphragm.

To ensure proper seating and help attain expected diaphragm life, attach the second fluid cover with air pressure on the pump. This procedure is needed for overmolded diaphragms (PO and CO) and for the following standard diaphragms: TP, SP, GE, PT.

1. Place the supplied tool (302) where the air valve gasket (113*) normally goes. Arrows (A) must face toward the fluid cover that is already attached.

   ![Diaphragm Installation Tool](302_A_t18299a)

   **Fig. 8. Diaphragm Installation Tool**

2. Reattach the air valve.

3. Supply the pump with low pressure air, just enough to move the diaphragm. For standard diaphragms, use about 10 psi (0.07 MPa, 0.7 bar); for overmolded diaphragms use about 20 psi (0.14 MPa, 1.4 bar). Shop air may be used. The diaphragm will shift so the second fluid cover will seat properly. Keep air pressure on until the second fluid cover is attached.

5. Remove the air valve and the tool (302), replace the gasket (113), and reattach the air valve. See **Torque Instructions**, page 20.

**NOTE:** If you are replacing the diaphragms but not the air valve, you still must remove the air valve, and replace the gasket with the tool so the air valve can be used for proper installation of the second fluid cover. Remember to remove the tool and replace the gasket when finished.

Reassembly of Overmolded Diaphragms

**NOTE:** If your pump has standard diaphragms, see page 16.

1. Clamp the shaft flats in a vise.

2. If diaphragm setscrew comes loose or is replaced, apply permanent (red) thread locker to diaphragm side threads. Screw into diaphragm until tight.

3. Assemble the air side plate (14) and washer (18) onto the diaphragm. The rounded side of the plate must face the diaphragm.

4. Apply medium-strength (blue) thread locker to the threads of the diaphragm assembly. Screw the assembly into the shaft as tight as possible by hand.

5. Grease the shaft u-cups (101*) and the length and ends of the diaphragm shaft (108*). Slide the shaft into the housing.

6. Reattach the first fluid cover (2). Arrow (A) must point toward the air valve. See **Torque Instructions**, page 20.

7. Repeat Steps 2 - 4 for the other diaphragm assembly.

9. Reassemble the ball check valves and manifolds as explained on page 12.
Torque Instructions

See Fig. 9 for fluid cover and air valve fasteners. See Fig. 10 for manifold fasteners.

**NOTE:** Fluid cover and manifold fasteners on the polypropylene pumps have a thread-locking adhesive patch applied to the threads. If this patch is excessively worn, the fasteners may loosen during operation. Replace screws with new ones or apply medium-strength (blue) thread locker to the threads.

If fluid cover or manifold fasteners have been loosened, it is important to torque them using the following procedure to improve sealing.

**NOTE:** Always completely torque fluid covers, then torque the manifold pieces together, then torque the assembled manifolds to the fluid covers.

Start all fluid cover screws a few turns. Then turn down each screw just until head contacts cover. Then turn each screw by 1/2 turn or less working in a crisscross pattern to specified torque. Repeat for manifolds.

---

**Fluid cover fasteners:**
- **Polypropylene and Stainless Steel:** 40-45 ft-lb (54-61 N•m)
- **Aluminum:** 55-60 ft-lb (75-81 N•m)

**Manifold fasteners:**
- **Polypropylene:** 40-45 ft-lb (54-61 N•m)
- **Aluminum:**
  - Refs 1-8: 11-21 ft-lb (15-28 N•m)
  - Refs 9-16: 55-60 ft-lb (75-81 N•m)
- **Stainless Steel:**
  - Refs 1-4: 110-120 in-lb (12-13 N•m)
  - Refs 5-12: 40-45 ft-lb (54-61 N•m)

Retorque the air valve fasteners in a crisscross pattern to specified torque.

**Air Valve fasteners**
- **Plastic Center Sections:** 45-55 in-lb (5-6.2 N•m)
- **Aluminum Center Sections:** 75-85 in-lb (8.5-9.6 N•m)

Also check and tighten the nuts or bolts (X) holding the manifold feet to the mounting brackets.

---

Aluminum kit includes:
- 8 bolts (7), hex head with flange base, 3/8-16 x 1.25 in., zinc-plated carbon steel

Polypropylene kit includes:
- 8 bolts (7), hex head, 1/2-13 x 2.5 in., stainless steel
- 16 washers (9)
- 8 nuts (10)

Stainless steel kit includes:
- 2 clamps (7a), 4 in., tri-clamp
- 2 gaskets (7b), 4 in., PTFE

### Manifold to Fluid Cover Fastener Kits
- **Aluminum kit includes:**  
  - 8 bolts (7), hex head with flange base, 1/2-13 x 1.25 in., zinc-plated carbon steel
- **Polypropylene kit includes:**  
  - 16 bolts (7), hex head, 1/2-13 x 4 in., stainless steel  
  - 32 washers, 1/2 in., stainless steel  
  - 16 nuts, 1/2 in., stainless steel
- **Stainless steel kit includes:**  
  - 8 bolts, hex head, 1/2-13 x 1.5 in., stainless steel  
  - 8 washers, 1/2 in., stainless steel  
  - 8 nuts, 1/2 in., stainless steel

### Fluid Cover to Air Cover Fastener Kits
- **Aluminum kit Includes:**  
  - 12 bolts (36 and 37), hex head with flange, 1/2-13 x 2 in., zinc-coated carbon steel
- **Polypropylene with Poly Center kit includes:**  
  - 8 bolts (36), hex head, 1/2-13 x 4 in., stainless steel  
  - 4 bolts (37), hex head, 1/2-13 x 2.5 in., stainless steel  
  - 20 washers (9), stainless steel  
  - 8 nuts (10), hex, stainless steel
- **Polypropylene with Aluminum Center kit includes:**  
  - 8 bolts (36), hex head, 1/2-13 x 3.25 in., stainless steel  
  - 4 bolts (37), hex head, 1/2-13 x 2.25 in., stainless steel  
  - 12 washers (9), stainless steel
- **Stainless Steel with Aluminum Center Kit includes:**  
  - 8 bolts (36), hex head, 1/2-13 x 1.5 in., stainless steel  
  - 4 bolts (37), hex head, 1/2-13 x 2.25 in., stainless steel  
  - 12 washers (9), stainless steel
- **Stainless Steel with Polypropylene Center Kit includes:**  
  - 12 bolts (36 and 37), hex head, 1/2-13 x 2.5 in., stainless steel  
  - 20 washers (9), stainless steel  
  - 8 nuts, hex, 1/2 in., stainless steel
Seats and Check Balls

Seat Kits

| BN   | 24K930 |
| FK   | 24K936 |
| TP   | 24K932 |

Kits include:
- 4 seats (11), material indicated in table

Check Ball Kits

| AC   | 24K937 |
| BN   | 24K938 |
| CR   | 24K941 |
| CW   | 24K942 |
| FK   | 24K945 |
| GE   | 24K939 |
| PT   | 24K943 |
| SP   | 24K944 |
| TP   | 24K940 |

Kits Include:
- 4 balls (12), material indicated in table

NOTE: Some kits may not be available for your model. See the selector tool at www.graco.com or speak with your distributor.

Seat Kits

| AC*  | 24K928 |
| AL*  | 24K929 |
| GE*  | 24K931 |
| PP*  | 24K933 |
| SP*  | 24K934 |
| SS*  | 24K935 |

Kits include:
- 4 seats (11), material indicated in table
- 8 o-rings (13)

* These seats require o-rings, which are also sold separately. See page 38.

NOTE: Some kits may not be available for your model. See the selector tool at www.graco.com or speak with your distributor.
Diaphragms

### Standard Diaphragm Kits

| BN       | 24K897 |
| CR       | 24K904 |
| FK       | 24K903 |
| GE       | 24K900 |
| SP       | 24K902 |
| TP       | 24K901 |

**Kits include:**
- 2 diaphragms (20, material indicated in table)
- 2 o-rings (17) for the bolt (used only on metal pumps)
- 1 diaphragm install tool (302), not included with rubber diaphragms

**NOTE:** Diaphragm plates (14, 15), washer (18) and diaphragm shaft bolts (16) are sold in separate kits. See page 36. The shaft (108) is part of Kit 24K850, the Center Section Rebuild Kit.

### Overmolded Diaphragm Kits

| CO       | 24K898 |
| PO       | 24K899 |

**Kits include:**
- 2 overmolded diaphragms (20, material indicated in table)
- 2 diaphragm set screws, stainless steel (16)
- 1 diaphragm install tool (302)
- 1 thread locker packet

**NOTE:** Air plates (14) and washer (18) are sold in a separate kit. See page 36. The shaft (108) is part of Kit 24K851, the Center Section Rebuild Kit.

**NOTE:** Air Valve Replacement Kit 24V231 is recommended for use with PTFE Overmolded diaphragm for maximum diaphragm life. See Air Valve Replacement Kits, page 31.

Two-Piece Diaphragm Kits

PT 24K905

Kits include:
- 2 diaphragms (20), PTFE
- 2 backup diaphragms (305), Santoprene
- 2 o-rings for the bolt (17, used only on metal pumps)
- 1 diaphragm install tool.

NOTE: Diaphragm plates (14, 15), washer (18) and diaphragm shaft bolts (16) are sold in separate kits. See page 36. The shaft (108) is part of Kit 24K850, the Center Section Rebuild Kit.

Fluid Plate Kits

3300A 24K906
3300P 24K907
3300S 24K908

Kits for aluminum and stainless steel pumps include:
- 1 fluid side diaphragm plate (15)
- 1 washer (18)
- 1 o-ring (17)
- 1 bolt (16)

Kits for polypropylene pumps include:
- 1 air side diaphragm plate (14)
- 1 fluid side diaphragm plate (15)
- 1 washer (18)

Air Plate Kits

All Models 24K975

Kits include:
- 1 air side diaphragm plate (14)
- 1 washer (18)
- 1 o-ring (17)

Kit Includes:
- 2 mounting brackets (23)
- 4 bolts (24)
- 4 nuts (10) and 8 washers (9), polypropylene or stainless steel pumps
Accessories

Grounding Wire Assembly Kit 238909
Includes ground wire and clamp.

Muffler 111897
Legacy or remote exhaust muffler option.

NOTE: See DataTrak Manual 313840 for:
- Pulse Count Conversion Kits 24B794 and 24B795
- DataTrak Conversion Kits 24K861 and 24K862
- All other data monitoring parts, including reed switches and solenoids.

Replacement Air Valve Kit 24K856,
Aluminum, DataTrak Compatible
Kit includes screws, air valve, and gasket.

Replacement Air Valve Kit 24K858,
Polypropylene, DataTrak Compatible
Kit includes screws, air valve, and gasket.

Replacement Air Valve Kit 24K949,
Aluminum, DataTrak Compatible, with FKM Seals
Kit includes screws, air valve, and gasket.

</tbody>
</table>

### Inlet/Outlet Sizes

| Fluid inlet - Polypropylene | 3 in. ANSI/DIN flange |
| Fluid inlet - Aluminum      | 3 in.-8 npt or 3 in.-11 bspt with 3 in. ANSI/DIN flange |
| Fluid inlet - Stainless Steel | 3 in.-8 npt or 3 in.-11 bspt |
| Air Inlet - all pumps       | 3/4 in. npt(f) |

### Wetted parts

- Materials chosen for seat, ball, and diaphragm options, **plus** the pump's material of construction - aluminum, polypropylene, or stainless steel. Aluminum pumps also have carbon-coated steel.

### Non-wetted external parts

- Polypropylene: stainless steel, polypropylene
- Aluminum: aluminum, coated carbon steel
- Stainless Steel: stainless steel, polypropylene or aluminum (as used in center section)

### Weight

| Polypropylene | 200 lb | 91 kg |
| Aluminum      | 150 lb | 68 kg |
| Stainless Steel | npt or bspt inlet/outlet | 255 lb | 116 kg |
|               | center flange inlet/outlet | 277 lb | 126 kg |

### Notes

* Maximum values with water as media at ambient temperature. Water level is approximately 3 feet above pump inlet.

** Startup pressures and displacement per cycle may vary based on suction condition, discharge head, air pressure, and fluid type.

*** Sound power measured per ISO-9614-2. Sound pressure was tested 3.28 ft (1 m) from equipment.

*Santoprene® is a registered trademark of the Monsanto Co.*

*The maximum temperature listed is based on the ATEX standard for T4 temperature classification. If you are operating in a non-explosive environment, FKM fluoroelastomer’s maximum fluid temperature in aluminum pumps is 320°F (160°C).*
Graco Standard Husky Pump Warranty

Graco warrants all equipment referenced in this document which is manufactured by Graco and bearing its name to be free from defects in material and workmanship on the date of sale to the original purchaser for use. With the exception of any special, extended, or limited warranty published by Graco, Graco will, for a period of twelve months from the date of sale, repair or replace any part of the equipment determined by Graco to be defective. This warranty applies only when the equipment is installed, operated and maintained in accordance with Graco’s written recommendations.

This warranty does not cover, and Graco shall not be liable for general wear and tear, or any malfunction, damage or wear caused by faulty installation, misapplication, abrasion, corrosion, inadequate or improper maintenance, negligence, accident, tampering, or substitution of non-Graco component parts. Nor shall Graco be liable for malfunction, damage or wear caused by the incompatibility of Graco equipment with structures, accessories, equipment or materials not supplied by Graco, or the improper design, manufacture, installation, operation or maintenance of structures, accessories, equipment or materials not supplied by Graco.

This warranty is conditioned upon the prepaid return of the equipment claimed to be defective to an authorized Graco distributor for verification of the claimed defect. If the claimed defect is verified, Graco will repair or replace free of charge any defective parts. The equipment will be returned to the original purchaser transportation prepaid. If inspection of the equipment does not disclose any defect in material or workmanship, repairs will be made at a reasonable charge, which charges may include the costs of parts, labor, and transportation.

THIS WARRANTY IS EXCLUSIVE, AND IS IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.

Graco’s sole obligation and buyer’s sole remedy for any breach of warranty shall be as set forth above. The buyer agrees that no other remedy (including, but not limited to, incidental or consequential damages for lost profits, lost sales, injury to person or property, or any other incidental or consequential loss) shall be available. Any action for breach of warranty must be brought within two (2) years of the date of sale.

GRACO MAKES NO WARRANTY, AND DISCLAIMS ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, IN CONNECTION WITH ACCESSORIES, EQUIPMENT, MATERIALS OR COMPONENTS SOLD BUT NOT MANUFACTURED BY GRACO. These items sold, but not manufactured by Graco (such as electric motors, switches, hose, etc.), are subject to the warranty, if any, of their manufacturer. Graco will provide purchaser with reasonable assistance in making any claim for breach of these warranties.

In no event will Graco be liable for indirect, incidental, special or consequential damages resulting from Graco supplying equipment hereunder, or the furnishing, performance, or use of any products or other goods sold hereto, whether due to a breach of contract, breach of warranty, the negligence of Graco, or otherwise.

FOR GRACO CANADA CUSTOMERS

The Parties acknowledge that they have required that the present document, as well as all documents, notices and legal proceedings entered into, given or instituted pursuant hereto or relating directly or indirectly hereto, be drawn up in English. Les parties reconnaissent avoir convenu que la rédaction du présent document sera en Anglais, ainsi que tous documents, avis et procédures judiciaires exécutés, donnés ou intentés, à la suite de ou en rapport, directement ou indirectement, avec les procédures concernées.
